HALLOCK, GERARD (1800-66). An American journalist, born at Plainfield, Mass. He graduated at Williams College in 1819, taught at Amherst Academy (1819-21), and after a short course at Andover, at Salem. In 1824 he started the *Boston Telegraph*, which was united with the *Recorder* a year later. He acquired a part interest in the *New York Observer* in 1827, and in 1828 joined David Hale in the management of the *Journal of Commerce*. He built a schooner, the *Evening Edition*, which met incoming vessels at Sandy Hook and brought back news; and in 1833 established a pony express between New York and Philadelphia, which gave the *Journal of Commerce* another great advantage. Hallock opposed abolition, but did much to further liberation of the slaves. He was one of the founders of the Southern Aid Society (1854); and in 1861 the use of the mails was forbidden his paper, and he was indicted for "encouraging rebels." Unwilling to give up his

principles, he retired from journalism and lived at Hallock's Castle in New Haven, where he was known as a liberal and generous citizen. Hallock was one of the founders of the Associated Press of New York. Consult *Life of Gerard Hallock* (New York, 1869).

HALLOCK, WILLIAM (1857-1913). An American physicist. He was born at Milton, N. Y., and graduated from Columbia College in 1879. After receiving the degree of Ph.D. from the University of Würzburg, Germany, in 1881, he was physicist of the United States Geological Survey from 1882 to 1891, serving also as professor of physics at the Corcoran Scientific School, Washington, in 1884-86 and as professor of chemistry and toxicology at the National College of Pharmacy in 1889-92. After having had charge of the Astrophysical Observatory of the Smithsonian Institution for one year, he returned to Columbia as adjunct professor of physics in 1892. He became full professor in 1902 and was dean of the faculty of pure science in 1906-09. He published *Outlines of the Evolution of Weights and Measures and the Metric System* (1906).

HALLOCK, WILLIAM ALLEN (1794-1880). An American editor, brother of Gerard Hallock. He was born at Plainfield, Mass., and was educated at Williams College and at Andover Theological Seminary. From the foundation of the American Tract Society (1825), he was its corresponding secretary until 10 years before his death. He edited the *American Messenger* and, in addition to his labors as editor and reviser of the publications of the society, wrote several biographies—*Harlan Page* (1835), which attained a circulation of more than 100,000 copies; *Moses Hallock* (1854); *Justin Edwards* (1855)—and many tracts. Consult Knight, *Memorial of William Allen Hallock* (New York, 1882).

HALL OF FAME. See WALHALLA.

HALL OF FAME FOR GREAT AMERICANS. A structure on the grounds of the New York University, completed in 1900 and designed to commemorate the achievements of distinguished citizens of the United States. It consists of a colonnade, 500 feet in length, following the curve of a terrace which supports three of the university buildings, and resting on a granite corridor which contains a long hall and five rooms, intended for a museum for the preservation of portraits and mementos of those whose names are inscribed in the colonnade. The colonnade contains 150 panels 7 feet long and 1¼ feet high, designed to be filled by bronze tablets bearing the name of the person commemorated, the dates of his birth and death, and a selection from his writings. The agreement between the university and the donor of the Hall of Fame provided that no name shall be inscribed except of a person born in what is now the territory of the United States, and of a person who has been dead at least 10 years. This rule was modified later to admit the names of distinguished Americans of foreign birth. A small hall, modeled on the Nike Apteros hall at Athens, at the north end of the colonnade will balance the Hall for American Women at the south end. Fifty names, if selected, were to be inscribed during 1900, and five additional names every five years thereafter, completing the full number by the year 2000. Nominations were received from the general public by the University Senate, who transmitted the names seconded by any member to a board of 100

electors selected from educators, writers, and others interested in American history, 51 votes being necessary to a choice, subject to the final approval of the University Senate. The first 50 names were required to include representatives of a majority of 15 classes; authors and editors; business men; educators; inventors; missionaries and explorers; philanthropists and reformers; clergymen and theologians; scientists; engineers and architects; lawyers and judges; musicians, painters, and sculptors; physicians and surgeons; rulers and statesmen; soldiers and sailors; distinguished men and women outside these classes. Panels left vacant by these restrictions may be filled the ensuing year. The announcement of the new foundation created wide interest. It was favorably considered by the press, and some papers offered prizes for the lists of names which should approach most closely to the final choice of the electors. The Senate received over 1000 names, of which 200 were submitted to the electors, who were themselves invited to add to the nominations. From the names suggested, the electors chose 29, as follows: George Washington, Abraham Lincoln, Daniel Webster, Benjamin Franklin, Ulysses S. Grant, John Marshall, Thomas Jefferson, Ralph Waldo Emerson, Robert Fulton, Henry Wadsworth Longfellow, Washington Irving, Jonathan Edwards, Samuel F. B. Morse, David G. Farragut, Henry Clay, George Peabody, Nathaniel Hawthorne, Peter Cooper, Eli Whitney, Robert E. Lee, Horace Mann, John James Audubon, James Kent, Henry Ward Beecher, Joseph Story, John Adams, William Ellery Channing, Gilbert Stuart, Asa Gray. Of the remaining names, those which received the votes of 10 or more electors were by that fact placed in nomination for the next election. In 1905 the electors chose the names of Lowell, Whittier, J. Q. Adams, James Madison, John Paul Jones, Alexander Hamilton, William T. Sherman, Louis Agassiz, Maria Mitchell, Emma Willard, Mary Lyon. In 1910 the names chosen were Harriet Beecher Stowe, Oliver Wendell Holmes, Edgar A. Poe, James Fenimore Cooper, William Cullen Bryant, George Bancroft, John Lothrop Motley, Frances E. Willard, Phillips Brooks, Roger Williams, Andrew Jackson.

HALLOPEAU, a'lôpô', FRANÇOIS HENRI (1842-). A French physician, born in Paris and educated there. He was appointed hospital physician in 1877, held a professorship in the faculty of medicine of Paris University after 1878, and became a member of the Academy of Medicine in 1893. From 1884 to 1907 he was on the clinical staff of the Hôpital Saint-Louis. Besides special monographs on diseases of the skin, Hallopeau wrote a standard *Traité élémentaire de pathologie générale* (1884; 4th ed., 1893); *Traité pratique de dermatologie* (1900); *Traité de la syphilis* (1911), in collaboration.

HALLORAN, LAWRENCE HYNES (1766-1831). An English writer of prose and verse, born probably in Ireland. He was first a teacher in a private school near Exeter. Afterward he took orders and was chaplain in the English fleet during the battle of Trafalgar. He published a descriptive poem, "The Battle of Trafalgar," in 1806. He went to South Africa as chaplain to the forces there, but, owing to his defense of two officers court-martialed for dueling in 1810, and his satirical pamphlet, *Cap-Abilities, or South African Characteristics* (1811), he was banished. On his return to England he led a

wandering life and was ultimately condemned (1818) to seven years' transportation for forgery. He opened a school in Sydney, Australia, where he died. His works include *Odes, Poems, and Translations* (1790), and *The Female Volunteer* (1801), a drama.

HALLOWELL. A city in Kennebec Co., Me., 2 miles south of Augusta, on the Kennebec River, and on the Maine Central Railroad (Map: Maine, C 4). It is the seat of the Maine State Industrial School for girls and has a public library. There are white granite quarries, shoe and sandpaper factories, and an iron foundry. The city owns its water works. Pop., 1900, 2714; 1910, 2864.

HALLOW-EVEN, or **HALLOWE'EN**. The name popularly given to the eve or vigil of All Hallows, or festival of All Saints, which being the 1st of November, Hallowe'en is the evening of the 31st of October. In England it was customary to crack nuts, duck for apples in a tub of water, and perform other harmless fireside revelries, which were survivals of the festival of Pomona, on the 1st of November. Still older were the Hallowe'en fires, survivals of Druidical ceremonies. Consult: Brand, *Popular Antiquities*, edited by Ellis (London, 1813); Chambers, *Book of Days* (2 vols., Philadelphia, 1911); Schell, *Hallowe'en Festivities* (New York, 1904); Frazer, *Balder the Beautiful* (ib., 1913).

HALLOW FAIR. A market held in some places in Scotland during November, i.e., at Hallowtide.

HALLOY, a'l'wâ', J. B. J., BARON D'OMALTIUS D'. See OMALTIUS D'HALLOY.

HALLSTATT (hâl'stât) **EPOCH**. The name applied to the last stage of bronze or the first stage of iron culture in Europe. It is so called from the necropolis of Hallstatt, Upper Austria, near the border of Salzburg. It is associated with the Celtic language group and the Alpine race of Ripley, who characterizes the Hallstatt culture of the eastern Alpine highlands as more highly evolved than that of the Neolithic period in the West due to Oriental influences. It appeared 1000 years or more before the Christian era. It flourished chiefly in Carinthia, southern Germany, Switzerland, Bohemia, Silesia, Bosnia, southeastern France, and southern Italy. See NEOLITHIC PERIOD.

HALLSTRÖM, hâl'ström, IVAR (1826-1901). A Swedish composer, born in Stockholm. He was educated for the legal profession and was private librarian to the Crown Prince, who became Oscar II of Sweden. In 1861 he was appointed the successor of Lindblad as director of the National School of Music at Stockholm. He is essentially a national composer, and all his writing is marked by the characteristics of Scandinavian music in general and the Swedish folk music in particular. He composed several operas, the most successful of which was *Den Bergtagna*, or the *Mountain King*. Other works include the operas *Hertig Magnus*; *Neaga*, or *Nyaga* (libretto by Carmen Sylva); *Wikingersfærd*; *Per Svanherde*; *Granadas Daughter*; several operettas; *Idyl* for soli, chorus, and orchestra, which in 1860 won the prize of the Musical Union of Stockholm.

HALLSTRÖM, PER (AUGUST LEONARD) (1866-). A Swedish author, born in Stockholm and educated at the technical institute there. He was an industrial chemist in Chicago in 1888-90, and began to write on his

return to Stockholm, where he was employed in the bureau of telegraphs in 1891-07. He was dramatic critic in 1904-05 for *Dagens Nyheter*. In 1908 he became a member of the Swedish Academy. His first published work was a volume of poems, *Lyrisk och fantasier* (1891), but he is better known for his romantic fiction and dramas. His novels and romances include: *Purpur* (1895); *En gammal historia* (1895); *Briljantsmycket* (1896); *Döda Fallet* (1902), probably his best novel; *Gustaf Sparfverts roman* (1903); *En skälmroman* (1906); *Nya noveller* (1912); and his dramas: *Grefven af Antwerpen* (1899); *Bianca Capello* (1900); *En veneziansk komedi* (1901); *Erotikon* (1908); *Två Legenddramer* (1908); *Två Sagodramer* (1910).

HALLUCINATION (Lat. *hallucinatio*, from *hallucinari*, *alucinari*, to wander in mind, dream, from Gk. *ἀλνεν*, *alyein*, to wander in mind) may be roughly defined as the apparent perception of some external thing to which no real object corresponds. "Hallucination" is thus to be distinguished from "illusion," which is a distorted or mistaken perception of some actual object. For example, if a rope lying on the ground is perceived as a snake, we have an illusion; but if a snake is perceived, and there is no rope or any similar object on the ground, we have an hallucination. (See ILLUSION.) An hallucination is, therefore, purely imaginary in character; yet the imaginary experience is so vivid, and its "feel" is so real, that it simulates an actual perception. The image which forms the basis of the hallucinatory experience is probably an image of the imagination, and not (as was formerly supposed) an image of memory. (See MEMORY; IMAGINATION.) Hallucinations are ordinarily auditory or visual, though they may also arise within the spheres of taste, smell, and touch. Furthermore, insane persons often complain of peculiar experiences which have their origin in the field of organic and kinesthetic sensation; the bones are broken, the brain is dried up, there is no stomach, and so forth. In these cases, it is, however, difficult to say whether we are in presence of hallucinations or illusions.

The commonest forms of hallucination are, perhaps, the "hypnagogic" visions or voices seen or heard in the drowsy interval preceding sleep. Sane persons, especially those engaged in intellectual pursuits, are liable to hallucinations after a period of concentrated mental work, and when in an anæmic or neurasthenic condition. The most typical hallucinations, however, are found in certain forms of insanity, where (as in delirium) they may be the only abnormal symptom. Indeed, all toxic states, when acute, are accompanied by hallucinations; and these, if other symptoms are lacking, may indicate the nature of the disease. In dementia præcox, hallucinations are common, and lead to the abnormal impulsive actions characteristic of this form of mental disease; in paranoia they form the foundation upon which the subsequent structure of delusions of persecution and ideas of grandeur is built; in mania also they are not infrequent, though usually elementary and transitory.

The presence of hallucinations usually indicates a grave condition, although accumulations of wax in the ear, catarrh or polypi in the nasal passages, enlarged tonsils, decayed teeth, etc., may lead to their arousal. In general,

hallucinations may be set up by hyperæmia of the brain membranes and cortex; by the action of drugs (alcohol, morphine, ether, etc.); and by disturbances of brain nutrition, resulting in anæmia. The common factor in all these cases seems to be a deposition, in the cerebral cortex, of products of decomposition, which at first enhance the irritability of the area affected, and presently serve themselves as stimuli to brain action. Consult: Wundt, *Grundzüge der physiologischen Psychologie* (Leipzig, 1911); Mueller, *Ueber die phantastischen Gesichterscheinnungen* (Coblenz, 1826); Sully, *Illusions* (New York, 1881); Parish, *Hallucinations and Illusions* (ib., 1897); White, *Outlines of Psychiatry* (ib., 1913); Sidis, *The Foundations of Normal and Abnormal Psychology* (ib., 1914).

HALLUPE. See WART HOG.

HALLUIN, *al'wîn'*. A town in the Department of Nord, France, situated on the River Lys, which here forms the Belgian frontier. It has extensive manufacturing establishments of cotton, linen, chairs, oil, chocolate, and beer. Pop., 1901 (commune), 16,600; 1911, 15,480.

HALLUX VALGUS (Lat., wry toe). The technical name of a deformity of the great toe, which is generally caused by wearing too small a shoe, the toe, for lack of room, being forced out of its normal position so that it sometimes overlaps the other toes. This malformation, which is most common among women, not unfrequently results in osseous changes which may necessitate amputation of the toe. The head of the first metatarsal bone frequently becomes enlarged from chronic periostitis; and a bursa may form in this region, constituting a bunion (q.v.), which may undergo inflammation.

HALLWACHS, *hül'vâks*, WILHELM (1859-1922). A German physicist, born in Darmstadt and educated at Strassburg and Berlin. He became a lecturer at Leipzig in 1886 and at Strassburg in 1888, and professor at the Dresden technical institute in 1893, at Giessen in 1899, and in 1900 again at Dresden. His most important work was on the ultra-violet rays; and the photo-electric phenomenon known as the "Hallwachs effect" was discovered by him in 1888.

HALLWICH, *hül'vîk*, HERMANN (1838-1913). An Austrian politician and historian, born at Teplitz and educated at Prague. From 1871 to 1897 Hallwich was a member of the Austrian House of Deputies, allied with the German Left, and prominent as a speaker on questions dealing with commerce and tariff. As an historian he is best known as an ardent defender of Wallenstein. He wrote: *Wallensteins Ende: Unge-druckte Briefe und Akten* (2 vols., 1870); *Heinrich Matthias Thurn als Zeuge im Prozess Wallenstein* (1883); *Gestalten aus Wallensteins Lager* (1885); *Fünf Bücher Geschichte Wallensteins* (1910).

HALM, *hâlm*, FRIEDRICH, the pseudonym of MÜNCH-BELLINGHAUSEN, F. F. J., Baron von (q.v.).

HALM, KARL FELIX (1800-82). A German classical scholar, born at Munich. From 1830 he taught at Speyer and Hadamar; in 1849 he became rector of the newly founded Maximilians-gymnasium at Munich. From 1856 to his death he was professor in the university there and director of the Royal Library. His principal works are critical or annotated editions of *Cicero* (1845-62; prominent among these is a complete text of Cicero's works, prepared in collaboration

with Orelli, 1854-62), *Quintilian* (1868-69), and *Cornelius Nepos* (1871); in the Teubner series, *Æsop's Fables* (1852), *Florus* (1854), and *Tacitus* (4th ed., 1891). His shorter treatises comprise papers on the orator Lycurgus and on Æschylus; *Lectiones Stobenses* (Speyer, 1841-42); the *Catalogue of the Fathers of the Latin Church* (1865); and his rich *Catalogue of the Munich Library*, vol. i (1865). Consult Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

HALMA, ál'má', **NICOLAS** (1755-1828). A French mathematician, born at Sedan and educated there and in Paris. He took holy orders, and was principal of the college at Sedan (1791-93). Removed from this position by the suppression of the colleges, he went to Paris and was in quick succession engineer, surgeon, professor at the Prytanée and at the Military School of Fontainebleau, librarian and instructor of the Empress, and librarian of the Department of Bridges and Highways. Then he undertook, at the instance of Delambre, the translation of Ptolemæus on astronomy, together with the commentaries of Theon on the first two books, and other material (1813-22). But the success and merits of his work were small and appointments as assistant curator of the Bibliothèque Sainte-Geneviève and as canon of Notre Dame were much more remunerative. His further works include translations and criticisms of Greek mathematicians and chronologists, and textbooks of geography, besides many miscellaneous writings.

HALMAHERA, hül'má-hä'rá. An island of the Moluccas. See GILOLO.

HAL'MOTE, or **HAL'IMOTE** (from *hall* + *mote*, AS. *gemot*, assembly). An ancient English court, held by the lord of a manor for the purpose of administering the laws and customs of the manor. It was composed of the freehold tenants of the manor, and came later to be known as the *Court Baron* or manorial court. See COURT BARON.

HALMSTAD, häll'm'städ. A town in Sweden, and capital of Halland Län, situated at the mouth of the Nissa on the east shore of the Cattegat, about 76 miles south-southeast of Göteborg (Map: Sweden, E 8). The town possesses a castle, now the residence of the Governor; a church dating from 1462, and a high school. It is an important railroad centre, and has regular steamship connection with most of the Swedish coast towns as well as with Copenhagen and Lübeck. It is the chief export town for a large part of Southern Sweden. The chief manufactures are cloth, beer, hats, jute, and paper. The town exports lumber, granite, fish (the river abounding in salmon), oats, butter, and woolen goods; the chief imports are foodstuffs, fertilizers, coal, petroleum, and machinery. Pop., 1901, 15,400; 1911, 18,297. Halmstad received municipal privileges in 1307, and has been the scene of many important events in the history of Sweden, among them the defeat of the Danes by Charles XI in 1676.

HAL'LO (Lat. *halos*, from Gk. ἅλως, *halōs*, disk, threshing floor, from ἅλειν, *halēin*, to grind). The general name given to a class of optical phenomena, described more specifically as **GLORY CORONA**, **ANTHELLA**, **PARHELLIA**, **MOCK SUNS**, **SUN DOGS**, **PARASELENA**, **MOCK MOONS**, ETC. When the light of the sun or moon or bright star shines through a delicate cloud, or layer of fog or mist, a variety of optical phenomena are

produced which may be classified as (a) circular rings around the sun or moon or star as a centre; (b) horizontal rings around the zenith as a centre; (c) partial arcs around the sun or the zenith; (d) vertical columns of light either through the sun or moon, or through points around the horizon symmetrically placed with reference to the sun; (e) elliptical rings around the central luminary. If the observer is so located that his shadow is projected upon a cloud, a bank of fog, or a meadow covered with drops of dew, he may see similar circles of light around his shadow. The circles around the sun really occur much more frequently than those around the moon, but are less frequently observed, owing to the brightness of the sun; they can, however, easily be seen by viewing the reflection of the sky in the surface of still water or an unsilvered glass plate.

Halo is the general term by which we designate a variety of optical phenomena whose study is a branch of physical optics. The circular rings of class (a), when they are quite near the sun, namely, within fifteen degrees, and, in fact, usually within five degrees, are the result of the interference of waves of light that have passed around the minute globules of water, or sometimes of dust, in the hazy atmosphere. This process was called diffraction by Sir Isaac Newton, who showed that in the rear of every small object there is a bright spot instead of a shadow, and surrounding this bright spot a series of concentric rings or bands of brilliant colors. If one looks at the sun through a mass of small particles or fibres of rather uniform size, as those of wool, a similar series of concentric rings will be seen, the angular diameter of which increases as the diameters of the fibres diminish; on this principle Dr. Thomas Young based the construction of his eriometer for the determination of the diameter of small particles and the fibres of textile materials. The largest glories or coronas that have been seen about the sun are those known as Bishop's rings, observed after the eruption of Krakatoa. These are about 10, 12, or 15 degrees in radius, and must have resulted from the presence of a very delicate layer of the finest imaginable dust or aqueous globules whose diameters probably did not exceed 0.0002, or one five-thousandth of an inch. On the other hand, particles that have a diameter of 0.0013 may produce rings having a radius of one degree, which would, therefore, very closely encircle the sun or moon, whose radius is only one-quarter of one degree. All these circles are known as coronas.

For large globules of water, such as compose the lower clouds, the diffraction phenomena become inappreciable, and are replaced by more complicated phenomena of reflection and refraction. In the higher alto-stratus and alto-cumulus clouds formed of small globules of water the range of diameters is usually rather large, and a series of overlapping circles is seen when the sun or moon is behind them. In the highest cirrus clouds the particles of ice form more delicate circles. For particles of a much smaller size than those that usually occur in clouds, the phenomena of diffraction are replaced by the colors of thin plates. Brilliant illustrations of these clouds occurred in the green, blue, and red suns seen when the sun was examined through the clouds of vapor that were thrown off by the eruption of Krakatoa in 1883. The study of this subject led to the experiments by Kiessling,

and more especially by Dr. Carl Barus, whose publications on cloudy condensation form the stepping-stones to our present limited knowledge of the growth of minute water globules from a diameter somewhat less than the tenth of the length of the sodium wave up to a diameter equal to that wave length itself. Consult *United States Weather Bureau, Bulletin No. 12* (1895).

In the small circles or coronas referred to, the red circles are outermost and the blue ones within; the term "halo" is applied by meteorologists more especially to circles of larger radius formed by reflection and refraction within the drops of water, such as the rainbow and the halos of 22 and 25 degrees' radius. In rainbows or halos formed by one reflection the red is innermost, namely, on the side towards the sun; and the blue is outermost, or away from the sun. Circles formed by two reflections have the red outside and the blue inside.

The complex and beautiful halo phenomena that are seen in the winter time result from the reflection and refraction of light by innumerable crystals of ice or simple snowflakes, which produce, in general, a hazy appearance in the air. When the sky is cloudless and of a pale blue near the zenith, these crystals of ice, settling down very slowly through the still air, may be sufficiently numerous to reflect enough sunlight to produce gorgeous effects. The simplest ice crystal is a regular hexagonal prism whose ends are either planes perpendicular to the axis or more commonly hexagonal pyramids. When a ray of light within a prism strikes an inner surface at an angle of incidence of about 80.5° it is totally reflected. When a beam of light passes through the two sides of a prism whose angle is 60°, in such a way as to suffer the minimum deviation, the latter will amount to about 21° 50'. Bearing these principles in mind, as also the fact that in an ordinary cloud the prisms have every possible position, we see that the general result will be that crystals that are near the position of minimum deviation will conspire to refract the light in the same direction; some of the others will send the light in any direction, so the general result will be a bright circle of light surrounding the sun as a centre; its angular radius from the sun will be about 21° 50', or the so-called halo of 22°, which has a dark interior, an inner reddish edge, and a bright exterior.

In still air the slender prisms of ice are likely to be suspended more nearly vertically. Therefore, their surfaces reflect a little sunlight as from a vertical mirror to the eye. When the observer is in the midst of a cloud or fog of such prisms, he sees a reflection of the sunlight forming a band of white light around the horizon at the apparent angular altitude of the sun and usually passing through it. This is called the *parhelic circle*. When other combinations of reflections from snow crystals occur so as to double or treble the brightness of particular spots in this parhelic circle, these spots are called mock suns, sun dogs, or *parhelia*. A vertical arc may be produced by the reflections from the horizontal surfaces of snowflakes or more readily from the horizontal surfaces of the broad basal planes of ice crystals. This arc may extend for a very considerable distance above and below the sun and is technically known as a *light pillar*. The term *anthelion* is properly applied to a bright solar reflection located at the antisolar point on the parhelic

circle. It sometimes acts as a secondary light source for secondary halos about it.

The most brilliant attendant of a halo is the tangential arc, which is sometimes seen touching the halo of 46° at its summit; it can only be seen when the sun's altitude is between 12° and 30°, and is due to the reflection of the sunlight through ice needles whose refracting edges are horizontal. The geometrical study of halos was most thoroughly worked out by Bravais, in his memoir of 1847 in the *Journal de l'Ecole Polytechnique*, vol. xviii (Paris); it is also quite fully presented by Mascart, *Traité d'optique* (Paris, 1896). The complete application of the theory of interference to the explanation of the phenomena of the supernumerary rings that accompany halos, and especially rainbows, was given by Dr. Thomas Young in 1804, but has more recently been presented in both elementary and analytical methods by Dr. J. Pernter, of Vienna. The idea that cloudy particles are not solid small spheres of water, but hollow vessels like a soap bubble, was abundantly disproved by Clausius, but still finds occasional mention in popular textbooks. However, the arguments for and against this vesicular theory (consult Kober, in Poggendorff's *Annalen*, Berlin, 1871) show that it can have no standing in science. The principal works on the theory of halos include: Bravais, "Mémoire sur les halos," in *Journal de l'Ecole Polytechnique* (Paris, 1845); Mascart, *Traité d'optique*, vol. iii (ib., 1896); Pernter and Exner, *Meteorologische Optik* (Vienna, 1902-10); Besson, "Sur la théorie des halos," in *Annales de l'Observatoire de Montsouris* (Paris, 1908-09). See also the *Monthly Weather Review* (Washington, 1914) for descriptions of elaborate halos seen in the United States in November, 1913, and for guides to the observation of halos.

HALOANDER, hā'lō-ān'dēr, GREGORIUS (1501-31). A German jurist whose family name was Meltzer. He was born at Zwickau and was educated in Leipzig. He published, at Nuremberg, under the protection and with the help of Willibald Pirckheimer, the *Pandectæ* (1529); *Institutiones* (1529); *Codes Justinianeus* (1530); and, in Greek with a Latin version, *Novellæ Constitutiones* (1531). He also edited Epictetus' *Enchiridion* (1529). Consult Schmidt, *Symbolæ ad Vitam Gregorii Haloandri* (Leipzig, 1886), and Flechse, *Gregor Haloander* (Zwickau, 1872).

HALOGENS (from Gk. ἅλς, *hals*, salt + γίγναι, *-genēs*, producing, from γίγνεται, *gignesthai*, to be born). The name given to the four nonmetallic elements, fluorine, chlorine, bromine, and iodine. The term was originally used by Berzelius, on account of the ease with which these elements form salts. The halogens combine directly with many of the other elements, much heat being evolved in the process. With hydrogen, they form the well-known hydrofluoric, hydrochloric, hydrobromic, and hydroiodic acids, respectively. The halogens exhibit an unmistakable gradation of physical properties. Thus, fluorine is a colorless gas; chlorine is a yellowish-green gas easily condensed to a liquid; bromine is a dark-red volatile liquid; iodine is a lustrous grayish-violet solid. See FLUORINE; BROMINE; CHLORINE; IODINE; PERIODIC LAW.

HALOPHILOUS PLANT (from Gk. ἅλς, *hals*, salt + φίλος, *phīlos*, loving). See HALOPHYTE.

HALOPHYTE (from Gk. ἅλς, *hals*, salt + *φυτόν*, *phyton*, plant). Plants which grow naturally in soils or waters rich in various salts, especially those with alkaline reactions. Common salt is quantitatively much the most important of these substances, although in certain

HALOPHYTES.

Longitudinal section of the stem of samphire, showing obliquely arranged palisade cells, also isolated water tracheids.

localities alum, saltpetre, and other salts are abundant enough to be of ecological importance. The vegetation of the oceans and salt seas and lakes, as well as that along their marshy shores, represents the greater part of the halophytic vegetation of the world; however, there are great interior halophytic areas in arid climates, where seas or salt lakes have formerly existed. Sometimes salt springs or small areas of salty soil disclose a halophytic vegetation. While a great many species have, perhaps, become perfectly adjusted to soils or waters rich in salt, it is nevertheless true that these conditions are unfavorable for the development of the great majority of plants; and experiments have shown that many halophytes may grow as well, if not better, in soils or waters with a low salt content. This is not true, however, in the case of such extreme halophytes as the marine algae.

Effects of Salt on the Growth and Structure. Almost all plants can take up limited quantities of ordinary salt without injury, although most plants probably do not need it in

HALOPHYTES.

Cross section of leaf of *Sonneratia alba*: 1, in ordinary soil condition; 2, when grown in salty soil, showing the great thickening of the cuticle in the latter.

their normal life processes. All but natural halophytes and a few xerophytes soon perish if large quantities of salt are present in the soil. Probably the injurious effects of salt are due to the increased difficulty of osmotic absorption by the root, and to the inhibiting action of salt

on the plant's normal life processes. Structures and conditions that have been experimentally shown to result from growth in salt solutions are reduction in leaf surface, increase of leaf thickness (due to richer development of palisades and water-storage cells), and reduction of intercellular spaces. All of these are well-known xerophytic characters, so that halophytes, with the exception of submerged marine plants, are now regarded as a class of xerophytes, whether the soil in which they grow be dry or wet. The structures noted, as well as others, doubtless serve to reduce transpiration, and it may be supposed that this is an advantage, because of the lessened osmotic absorption. See XEROPHYTES.

Halophytes belong to a great number of families, some of which, as the Chenopodiaceæ, Frankeniaceæ, Plumbaginaceæ, are particularly rich in halophytic members. One of the most interesting features of halophytes is the wide distribution of their species. It is easy to see how coastal forms should be similar over wide areas, but why the same forms should also occur in many continental interiors is not so apparent. Perhaps the former interior seas had marine connections; in this case the interior halophytes form the best-known group of relict plants (q.v.). It must be remembered, however, that migrations are easier than has been generally supposed, and that, given a congenial habitat in a congenial climate, a species or genus characteristic of such places is pretty likely to appear sooner or later. The various halophytic formations and associations are treated under BEACH PLANTS; BENTHOS; DESERT VEGETATION; DUNE VEGETATION; MANGROVE SWAMP; PLANKTON; SWAMP.

HALPINE, or HALPIN, CHARLES GRAHAM (1829-68). An American soldier and poet, born in Oldecastle, County Meath, Ireland, and educated at Trinity College, Dublin. After a short journalistic experience in Dublin, he went to America in 1851. For a few months he was the associate editor of the *Boston Post*, served as the Washington correspondent of the *New York Times*, and, after short connections with various metropolitan papers, was associate editor of the *New York Times* until 1857, when he became editor in chief of the *New York Leader*. At the outbreak of the Civil War he enlisted in the Sixty-ninth Regiment, New York Volunteers. He served as assistant adjutant general on General Hunter's staff and under General Halleck, accompanied the former on his Shenandoah expedition in 1864, resigned from the service soon afterward on account of failing health, and was brevetted a brigadier general of volunteers. His experiences and observations as a soldier found humorous expression in the popular poems and stories written over the pen name of Miles O'Reilly. He became editor of the *New York Citizen* in 1864 and strongly advocated civil-service reform, was elected register of New York County in 1867, and died in the following year from his continued literary exertions. His best-known writings, apart from fugitive poems, are: *Lyrics by the Letter H* (1854); *Life and Adventures, Songs, Services, and Speeches of Private Miles O'Reilly* (1864); *Baked Meats of the Funeral: A Collection of Essays, Poems, Speeches and Banquets of Private Miles O'Reilly* (1866). His collected *Poetical Works* appeared in 1869, edited with a biographical sketch, and explanatory notes by R. B. Roosevelt.

HALS, hals, FRANS (c.1580-1666). A Dutch

FRANS HALS

"HILLE BOBBE" FROM THE PAINTING IN THE NATIONAL GALLERY, BERLIN

portrait and genre painter, one of the greatest painters of all times. He was born at Malines, in the Province of Antwerp, the son of a Protestant cloth worker. For religious reasons his father emigrated to Haarlem before 1591, in which year his son Dirk was born. Although Frans studied with Karel van Mander, no trace of this master's influence appears in his earliest surviving picture, which dates from his thirty-sixth year. With the exception of a visit to execute commissions at Amsterdam, he spent his entire life at Haarlem, where he was twice married and reared a large family. He lived in modest circumstances and in late life was very poor. In 1652 his furniture and pictures were distrained to pay a baker; he was subsequently assisted with grants from the city poor fund; and in 1664 the municipality of Haarlem allowed him a yearly pension of 200 florins, which he enjoyed until his death, on Sept. 7, 1666. His first marriage was unhappy, so much so that he was reprimanded by the magistrates for beating his wife. His marriage to Lysbeth Reynier was more congenial; at least there are no complaints about his conduct. His jovial disposition and love for the tavern still live in story, and it is certain that he was held in high esteem by his fellow townsmen. No other painter of Holland received so many commissions from the guilds and other public corporations, or retained the favor of his contemporaries for half a century. Like his brother, Dirck, he was an honorary member of the chamber of rhetoric; he belonged to the civic guard, and was head of the painters' guild and of an important school of painting.

The artistic development of Hals may best be studied in his large *doelenstukken* (portrait groups of the military guilds and other corporations) worthily preserved in the new Frans Hals Municipal Gallery (1913) at Haarlem—for Hals was, above all others, the painter of militant Holland and was himself one of the guildsmen who fought against Spain. The earliest of these groups, the "Banquet of the Officers of St. George's Shooting Company" (1616), is in his first manner. There are traces of the old Haarlem school, but Hals is already an independent master. His grouping is freer; his color, though still brown in tone, is more luminous and applied in a broader manner; and the characterization is far superior.

His second manner (1627-39) is represented by four fine groups in the Haarlem Gallery: the "Banquet of the Officers of St. George's Shooting Company" (1627); "Banquet of the Officers of the Arquebusiers' Shooting Company" and "Assembling of the Officers of the Arquebusiers' Shooting Company," the most serious and finest of the groups; and the "Officers and Sergeants of St. George's Shooting Company," 19 figures, among which is that of the artist himself. To these might be added a similar piece, "The Company of Capt. Reynier Reael" (1637), Rijks-Museum, Amsterdam, begun by Hals, but completed by Pieter Codde. During this period his pictures are characterized by a light-gray tone, greater breadth of execution, and greater seriousness of character. Another portrait group of the Haarlem Museum, the "Governors of the Elizabeth Hospital" (1641), in the peculiar treatment of light and in its rich golden hue, shows the influence of Rembrandt—an influence, however, which was only temporary and experimental. Before 1635 his color began to grow

deeper, and a darker-gray tone pervades his pictures. His treatment attained a breadth perhaps never achieved by another of the old masters. This last manner is represented in the Haarlem Museum by two fine portrait groups: "Governors of the Hospital for Old Men" and the "Lady Governors of the Hospital for Old Women," both of 1665. Frans Hals makes all details subordinate to the character and expression of the face, thereby emphasizing the masterly execution. "Never was there better painting; never will there be any better painting." He left more than 160 works, most numerous in Dutch and German galleries and in those of Paris, St. Petersburg, and New York. His sitters included members of the most distinguished families of Holland, its greatest divines, both Protestant and Catholic, its renowned statesmen and military commanders, and scholars, besides numerous painters and a host of burghers.

Among the most interesting examples of portraits of the first period are the wrongly called "Artist and his Wife in a Park" (1624), at Amsterdam; the irresistible "Laughing Cavalier," Wallace collection, London; an unknown "Nobleman and his Wife," at Cassel; "Jacob Olycan and his Wife" (1625), in The Hague; and a "Young Married Couple" (1627), in Berlin. The Louvre possesses three fine examples of his second manner: "Nicholas Berensteyn" (1629), "Vrouw Berensteyn" and the "Berensteyn Family," an admirable group composed of father, mother, six children, and two nurses; and a "Girl of the Berensteyn Family," one of the most charming of Hals's feminine portraits. Other prominent examples are the "Nurse with Child" (1630), Berlin Museum; the life-size figure of William van Heythuysen, Liechtenstein collection, Vienna—his masterpiece, according to Bode; an "Unknown Man," Buckingham Palace, London; "Nicolas van der Meer" (1631) and "Vrouw van der Meer," in Haarlem Museum; the supposed "Admiral de Ruyter," Spencer collection, Althorp (England).

The portraits of his last period show no decline. Among the best are those of Heer Bodolphe and Vrouw Bodolphe (1643), J. P. Morgan collection, Metropolitan Museum, New York; four well-known portraits of unknown men, in the Hermitage at St. Petersburg; especially the so-called "Admiral" and "Tyman Oosdorp" (1656), Berlin. Mention should also be made of Hals's portraits of himself, of which the two best, painted 1635 and c.1650, are in possession respectively of Henry C. Frick, New York, and Jules Porges, Paris.

Hals may be called the father of Dutch genre painting, in which he found an amusement and freedom not possible in ordered portraits. His subjects were usually taken from the humbler walks of life—fisher boys and girls, market women, wandering musicians, and especially his own children, whom he never tired of painting. Most were painted between 1620 and 1640, with broader humor and bolder execution than his portraits. Among the best are: the "Jolly Trio" (1615), Altman collection, Metropolitan Museum, New York; the so-called "Herring Vender" (1616), Earl of Northbrook's collection, London; "Junker Ramp and his Mistress," Altman collection. To the same period belong a number of pictures of singing boys and flute players in the galleries of Brussels, Berlin, Königsberg, Schwerin, etc., for which his children

often posed as models; and of jovial drinkers at Amsterdam, Cassel, etc. Especially fine examples of this genre are the "Fool Playing a Lute," Baron Gustave de Rothschild, Paris, the better-known copy being at Amsterdam, and "La bohémienne," in the Louvre. "Hille Bobbe," an old woman with an owl upon her shoulder and a tankard of wine in her hand, is in the Berlin Museum (replica in the Metropolitan Museum, New York).

Hals is especially well represented in American collections. At the Hudson-Fulton Memorial Exhibit, in 1909, the 20 examples displayed were by no means all in the United States. The Metropolitan Museum of Art, New York, has, including the Morgan and Altman pictures, nine examples, among which are portraits of an "Unknown Man" and an "Unknown Woman" in Hals's very best style. He is represented also in the Boston Museum, the Art Institute of Chicago (two), and in many private collections—thus, in the Frick (two), Havemeyer (two), J. P. Morgan (two), besides others mentioned above; and Huntington (three), Borden, Jesup, and Schwab collections, New York; in the Johnson (two) and Widener collections, Philadelphia (the last named having six fine examples).

Frans Hals is the first great painter of the Dutch national school and ranks with Rembrandt as one of its greatest geniuses. Compared with Rembrandt, he is lacking in sentiment and imagination; but as a painter pure and simple, he has never been surpassed. His brushwork is brilliant and sure, and he excels particularly in the juxtaposition of colors and their subordination to a prevailing tone and the rendition of their values. He paints without artifice in simple diffused light. The most striking expressional quality of his pictures is their inimitable humor, of which he depicted every phase—from a thoughtful, kindly smile to uproarious laughter.

Sons and Pupils. Hals's influence on Dutch painting was no less profound than that of Rembrandt, affecting the entire Haarlem school of the seventeenth century. At least seven of his sons were painters, and his daughters married into the profession. JAN, HARMAN (1611-69), and REYNIER (1630-after 1671) are represented by signed pictures, but the most important is FRANS HALS THE YOUNGER (c.1620-69). Many still-life and stable interiors, as well as landscape drawings with figures and cattle, bear his signature. They are in the manner of the early Rotterdam painters of similar subjects and do not resemble his father's work. The "Armorer," in St. Petersburg, perhaps best represents his style. The attribution of weak copies of his father's works to him is purely arbitrary. The principal pupils of the elder Frans Hals were: Adriaen Brouwer, Adriaen and Isaac van Ostade (painters of peasant life), Philip Wouwermann (q.v.); Jan Molenaer, his wife Judith Leyster, and Jan de Bray. But many others felt his influence.

Bibliography. The first critical authority on Frans Hals in the modern sense was Bode, *Studien zur Geschichte der holländischen Malerei* (Brunswick, 1883). The best modern biography is by Moes (Fr. trans., Brussels, 1909); others are by Davies, the principal British authority (London, 1902); and Peladan (Paris, 1912), with admirable illustrations, but unscholarly text. A complete list of his works is by De Groot, *Catalogue of Dutch Painters*, vol. iii

(Eng. trans., London, 1911), with good brief biography. For reproductions of all his paintings, with a brief bibliography, consult the folio monograph by Bode (Berlin, 1914).

HALSBURY, hălzb'ēr-ı, HARDINGE STANLEY GIFFARD, first EARL of (1823-1921). A British Lord Chancellor, born in London and educated at Merton College, Oxford. He became a barrister of the Inner Temple in 1850, queen's counsel in 1865, treasurer of the Inner Temple in 1881, and participated in many of the famous criminal cases of his time. In 1875 he was knighted; from 1875 to 1880 he was Solicitor-General; and he was a member of Parliament from 1877 to 1885, when he became Lord Chancellor, with the title of Baron Halsbury. He continued in office until 1905, except during the Liberal ministries of 1886 and 1892-95. In 1898 he was created Earl of Halsbury and Viscount Tiverton.

HÄLSCHNER, hălsh'nēr, HUGO PHILIPP EGMONT (1817-89). A German criminologist. He was born at Hirschberg, Silesia, was educated at Breslau and Berlin, and in 1850 was made professor ordinarius of law at Bonn, where he lectured on the history and nature of criminal law. In 1868 he was made a life member of the Prussian Upper House. His principal publications are: *System des preussischen Strafrechts* (2 parts, 1858 and 1868); *Das Recht Deutschlands im Streit mit Dänemark* (3d ed., 1863), an important work in which the disputes between Germany and Denmark are treated from the standpoint of the legal historian.

HALSTEAD, MURAT (1829-1908). An American journalist, born in Ross Township, Butler Co., Ohio. He was educated at Farmers' College, near Cincinnati, became a member of the staff of the *Cincinnati Commercial* in 1853, and in 1865 its chief owner. This journal was subsequently consolidated with the *Gazette of Cincinnati*, as the *Commercial-Gazette*, of which he became the editor in chief. He was afterward editor of the *Brooklyn Standard-Union* and then became a special newspaper correspondent and magazine writer, in which capacity he visited the Philippine Islands during the Spanish-American War. His works include: *The Story of the Philippines* (1898); *Life and Achievements of Admiral Dewey* (1899); *Full Official History of the War with Spain* (1899); *Aguiñaldo and his Captor* (1901); *The Illustrious Life of William McKinley* (1901); *The Life of Theodore Roosevelt* (1902); *The War between Russia and Japan* (1904).

HALSTED, BYRON DAVID (1852-1918). An American botanist, born at Venice, N. Y. He was educated at the Michigan Agricultural College (B.S., 1871) and, after two years' teaching in that institution, at Harvard (Sc.D., 1878). In 1879 he became editor of the *American Agriculturist*. He was elected professor of botany at Iowa Agricultural College (1885) and at Rutgers College (1889). He was associate editor of the *Bulletin of the Torrey Botanical Club* in 1890-93 and of *Systematic Flora* after 1905. He served as president of the Society for the Promotion of Agricultural Science in 1897-99, and of the Botanical Society of America in 1900-01. Halsted gained most reputation by his knowledge of weeds and fungi injurious to agriculture. He wrote: *The Vegetable Garden* (1882); *Household Conveniences* (1883); *Farm Conveniences* (1888); *A Century of Agricultural Weeds* (1891).

HALSTED, GEORGE BRUCE (1853-1922). An American mathematician and educator, born at Newark, N. J. He graduated at Princeton in 1875 and studied at Johns Hopkins and in Berlin. He was an instructor in postgraduate mathematics at Princeton (1878-81) and professor of mathematics at the University of Texas (1884-1903), St. John's College, Maryland (1903), Kenyon College, Ohio (1903-06), and after 1906 at the Colorado State Teachers College. He was awarded a fellowship by the Royal Astronomical Society, London. Halsted devoted himself to the dissemination of a knowledge of non-Euclidean geometry and to this end published translations of Bolyai and Lobachevsky. He wrote on mathematics, philosophy, and formal logic for a number of scientific magazines, was a collaborator in preparing *The Century Dictionary* and *Cyclopedia*, and published: *Mensuration* (1881); *Elements of Geometry* (1885); *Elementary Synthetic Geometry* (1892); *Pure Projective Geometry* (1895); *Non-Euclidean Geometry* (1900); *Rational Geometry* (1904); *On the Foundation and Technic of Arithmetic* (1911); and 90 books and memoirs cited in *Bibliography of Non-Euclidean Geometry*, by D. M. Y. Sommerville (London, 1911).

HALSTED, WILLIAM STEWART (1852-1922). An American surgeon. He was born in New York City and graduated from Yale University in 1874 and from the College of Physicians and Surgeons (Columbia) in 1877. He was attending physician at the Charity Hospital (New York) in 1881-83, attending surgeon at Bellevue and Presbyterian hospitals in 1885-87, surgeon in chief at the Emigrant Hospital (New York) in 1881-84, and associate surgeon and surgeon in chief of the Out-Patient Department of Roosevelt Hospital in 1881-87. In 1889 he became professor of surgery at Johns Hopkins University and surgeon in chief of Johns Hopkins Hospital. His publications consist of papers on pathology, physiology, and surgery.

HALYARDS. See **HALLIARDS**.

HALYS, hāl'is. The old name of the Kizil Irnak (q.v.), the largest river in Asia Minor.

HALYSITES, hāl't-sī'tēz (from Gk. *ἡλυσίτης*, *halysites*, chain). A fossil coral found in rocks of Ordovician and Silurian age in North America, Europe, and Australia, and distinguished by the chainlike figure produced by a cross section of its mass upon the surface of a rock in which it is embedded. *Halysites* is a very characteristic fossil of the Niagara series, and two species, viz., *Halysites catenularius* and *Halysites escharoides*, are common in the Silurian coral reefs of North America and England, where they are known as chain corals.

HAM, hām. A town and fortress in the Department of Somme, France, on the Somme, 36 miles by rail from Amiens and 70 miles north-northeast of Paris. It is situated in the midst of a low and swampy country. Its celebrated mediæval castle, strengthened by modern additions, has frequently served as a prison for political offenders, including Louis Napoleon, afterward emperor, who was held here from 1840 to 1846. After the coup d'état of Dec. 2, 1851, the Republican generals Cavaignac, Lamoricière, Changarnier, and others were imprisoned in the castle for some time. The donjon, a round tower, is 110 feet high, 110 feet broad, and has walls 36 feet thick. Other noteworthy features of the town are the twelfth-century Romanesque

church of Notre Dame, recently restored, a belfry, public library, and museum. Its industries are peat cutting and the making of sugar, brandy, and oil. Pop., 1901, 3300; 1911, 3181.

HAM (AS. *hamm*, OHG. *hamma*, dialectic Ger. *Hamme*, ham, haunch; connected with Gael. *cam*, Lat. *camur*, crooked). Properly the hind part or angle of the knee, but usually applied to the cured thigh of the ox, sheep, or hog, more especially the last. Ham curing and bacon curing are performed in a variety of methods, each country or district having its own peculiar treatment. The essential operations are salting and smoking. The curing of pork hams forms a large and important item in the industry of various countries. See **FOOD**; **PACKING INDUSTRY**.

HAM. According to Gen. x, 6-20, the second son of Noah, and ancestor of a group of people which includes Cush (Ethiopia), Mizraim (Egypt), Put (Libya), and Canaan. In Gen. ix, 26, 27, the three sons of Noah were Shem, Canaan, and Japheth, representing three groups settled in Palestine. When this song was composed, Shem was probably the name of a congeries of tribes, conscious of a closer kinship, including, besides Israel, many of the tribes of Judah, the Negeb, Edom, and the East Jordan country. Japheth was probably a similar name, including some tribes, like the Cretans, the Pelethites, the Zakkalians, and the Philistines. Canaan was also the name of several tribes. Subsequently the names of two of the brothers acquired a wider meaning, so that Shem came to include Arabs, Aramæans, Assyrians, Arrapachæans, and also Elamites (because of the long Semitic occupation of Elam and considerable Semitic population there), and Lydians (because of the early Assyrian occupation of a part of Asia Minor). Japheth was made to include a number of nations in Asia Minor and the islands and western coast lands of the Mediterranean, as different as Cypriotes, Medes, Greeks, and Scythians. The name of Canaan was too closely attached to the land of Canaan to allow a similar expansion, and Ham was used to designate the larger family made up of Egyptians, Libyans, Ethiopians, and Canaanites. The most probable theory is still that Ham is connected with the name *Chem* for Egypt. There is every reason to believe that all of these peoples belonged originally to the same branch of the Mediterranean race. On the relation of the Canaanites to the others, see **CANAAN**. Consult the commentaries on Genesis by Holzinger, Strack, Dillmann, Delitzsch, Ball, Skinner, Driver, Gunkel; also Knobel, *Die Völkertafel der Genesis* (Giessen, 1850); Schmidt, *The Messages of the Poets* (New York, 1911).

HAM, East and West. Two English municipalities, east suburbs of London, from which they are separated by the river Lea (Map: London, D 8 and 9). Their growth and importance are due to their proximity to the metropolis, and to the numerous factories established in their midst to evade the prohibitive enactments of the London County Council. Both city administrations are of a high order. West Ham owns a fine town hall, municipal buildings, a public hall, free libraries, a well-equipped technical institute, an electric-lighting plant, electric tramways, isolation hospitals, a lunatic asylum, public baths, and recreation grounds. East Ham is well provided with libraries, parks, and recreation grounds, electric lighting, and tramways, a new

town hall, technical institute, and public baths. Pop., East Ham, 1901, 96,000; 1911, 133,504; West Ham, 1901, 267,300; 1911, 289,102.

HAMA, hā-mā' (the *Hamath* of the Bible). A city of Syria, situated on both banks of the Orontes, about 120 miles by rail north of Damascus (Map: Turkey in Asia, C 3). It is irregularly laid out with narrow, crooked, ill-paved streets, and houses built mostly of mud. It has 13 mosques, a castle of the emirs of the Kilani family, and well-stocked bazars. Its manufactures consist chiefly of rough woolen mantles, cotton fabrics, and leather goods; trade is with the neighboring Bedouins. Pop. (est.), 45,000. See **HAMATH**.

HAMADAN, hū'mā-dān'. A town of north-west Persia, capital of a province of the same name, situated in a very fertile and picturesque region, about 180 miles southwest of Teheran (Map: Persia, C 5). It is unattractive, but has a number of well-stocked bazars, several mosques, and two tombs of special interest—one claimed to be that of Mordecai and Esther, and the other of the Arabian philosopher Avicenna (q.v.). It has a unique system of separating different parts of the town by gates in times of disorder. Hamadan is famous for its copper ware, leather trunks and saddlery, harness, felt, carpet, silver, and gold works. Commercially the town is of considerable importance, owing to its position on the route between Bagdad and Teheran. The population is estimated at 40,000, including about 1000 Jewish families. Hamadan is generally believed to occupy the site of the ancient Ecbatana (q.v.).

HAMADHAN I, ABU'L FADL AHMED IBN AL HUSAIN AL (967-1007). A Moslem poet. He was born in Hamadan, lived in Jurjan two years and later in Nishapur, Ghazna, and Herat, where he died. His extensive knowledge of poetic productions and the beauty of his style earned for him the title *Badr al saman*, "the wonder of the age." He developed the new species of poetry called the *makamat*, a kind of rhymed prose in a highly finished and ornamental style. The *makamat* often took the form of a dialogue. In this branch he was excelled only by Hariri, of Basra, a century later. He also developed the epistolary style which reached its perfection in the works of Abu'l Ala al Maarri. His *Rasa'il*, or Letters, were published at Constantinople in 1881, with the commentary of Ibrahim al Ahdab at Beirut in 1890; his *makamat* were published at Constantinople, 1881, with the commentary of Mohammed Abdo at Beirut, 1889; the latter had already been edited by Scheidius in 1572 under the title *Consensus Hamadanensis vulgo dicti Bedialzaman*, and six of them by De Sacy in his *Chrestomathie Arabe* (2d ed., Paris, 1827). Consult Kremer, *Culturgegeschichte des Orients* (Vienna, 1877); Brockelmann, *Geschichte der arabischen Literatur*, I (Weimar, 1898); Nicholson, *A Literary History of the Arabs* (London, 1907).

HAM'ADRY'AD (Lat. *hamadryas*, from Gk. ἡμαδρύας, *hamadryas*, from ἡμα, *hama*, with + δρύς, *dryes*, tree). A venomous serpent, the largest of Oriental cobras (*Naja* or *Ophiophagus bungarus*). It is nowhere numerous, but widely distributed, occurring in damp, forested regions from Ceylon to the Philippines, and is known as the giant, or king, cobra, and in some parts of India as sunerkor. It grows to a length of 12 feet and probably more, and has a hood which it can expand; but differs from the common

cobra in having no spectacled markings, by the presence of a pair of large shields on the head behind the parietals. It is variable in color, but usually, when adult, is some shade of brown, with broad dark crossbands. It is fierce in disposition, rarely showing any fear of man (though exhibiting much intelligence in captivity), and often climbs trees and conceals itself in their hollows. It is almost the only snake which will attack a man without provocation. It feeds altogether upon snakes, which it chases swiftly, seizes behind the head, and swallows headforemost. It is said that a man bitten by a vigorous snake of this species will die in three minutes, and an elephant in two hours. Were it not so rare it would be the most dangerous reptile in the world. See **COBRA**; **KRAIT**. Consult Ditmars, *Reptiles of the World* (New York, 1910).

HAMADRYAD. The mandrill. See **BAROON**.

HAMADRYADS. See **NYMPH**; **DRYADS**.

HAM'AME'LIS. See **WITCH HAZEL**.

HAMAN. A character introduced into the Book of Esther as an "Agagite" (Amalekite), chief minister of Ahasuerus, King of Persia. When Mordecai the Jew refused to obey the order to bow down before Haman, the latter made an attempt to destroy all the Jews in the kingdom; Queen Esther, however, foiled his design, and Haman was hanged on the very gibbet which he had prepared for Mordecai. See **ESTHER**, **BOOK OF**.

HAMANN, hū'mān, JOHANN GEORG (1730-88). A German writer and a very original thinker, sometimes called the "Magician of the North." He was born at Königsberg in Prussia. His early life was somewhat checkered, and he frequently changed his dwelling place. In 1759 he returned to his home in Königsberg and devoted himself to the study of the ancient languages and Oriental literature. As an author, Hamann was little esteemed by his contemporaries. His language was figurative and symbolical in the highest degree and frequently concealed rather than revealed the depth of his thinking. Yet he had the friendship of many eminent authors, and the influence which he exercised upon Herder, Goethe, and Jacobi was considerable. All his writings exhibit a deeply spiritual faith, which took the form of extreme pietism. Among them the *Sokratische Denkwürdigkeiten* (1759) and *Kreuzzüge des Philosophen* (1762) are perhaps less oracular than the rest. His complete works were published by Roth (Berlin, 1821-43), in seven volumes; an eighth volume by Wiesner (Berlin, 1843) contains additions and explanations and an indispensable index. His correspondence with Jacobi was published by Gildemeister (Gotha, 1868), who also wrote his biography (4 vols., 1857-63). For his life, consult Poel (Hamburg, 1874-76); for his literary influence, Minor (Frankfort, 1881).

HAMANN, OTTO (1857-). A German zoologist. He was born in Leipzig and studied at Jena, at Naples, and at Göttingen, where he was first assistant in the zoological institute. In 1892 he became a librarian in the Berlin Royal Library. His major published works deal with his zoological studies of the lower forms of life and with some of the broad general questions of the science: *Beiträge zur Histologie der Echinodermen* (1884-89); *Entwicklungslehre und Darwinismus* (1892); *Die Nemathelminthen* (1891-95); *Raeckel und seine Kampfweise* (1893); *Europäische Höhlenfauna* (1896); *Ab-*

stammung der Menschen (2d ed., 1910); *Natur und Bibel* (2d ed., 1911).

HAMASA, or **HAMASAH**, hā-mā'sā (Ar. *hamāsah*, bravery, from *hamisa*, to be firm). The name of a famous anthology of Arabic poetry, collected by Habib ibn Aus al Tai, surnamed Abu Tammam (c.807-846), and divided by him into 10 books. The first book is the longest and deals with the heroes of pre-Islamic times, illustrating the quality of *hamasah* (valor), which names the book, and also the whole collection. The remaining books deal with (2) Lamentations; (3) Manners; (4) Love; (5) Satires; (6) Hospitality; (7) Descriptions; (8) Travel; (9) Pleasantries; (10) Blame of Women. The collection is made with singularly good taste, and is taken from ordinary works rather than from the standard poets. It is of great historical value, since it pictures very faithfully the life and the characteristics of the early Islamic era. There are three editions of the Arabic: (1) by Freytag (2 vols., Bonn, 1828-47); (2) the Bulak edition (A. H. 1256); (3) the Calcutta edition (1856). The *Hamasah* has been translated into German by Friedrich Rückert (Stuttgart, 1846), and selections have been rendered into English by Lyall, *Ancient Arabic Poetry* (London, 1885). See **ABU TAMMAM**.

HAMATH, hā'math. A city in northern Syria, situated on the banks of the Orontes (the modern el-Asi). The name signifies "fortress" or "sacred inclosure"; by the Greeks the city was called Epiphania, probably in honor of Antiochus IV Epiphanes; by the Christians, Emath Epiphania; but the old name still maintains itself as Hama. Hamath is mentioned as early as the inscriptions of Thothmes III (1501-1447 B.C.) and Seti I (1319-1310 B.C.). It seems to have been an ancient stronghold of the Hittites. King Toi of Hamath sent to David a message of congratulation upon his victory over Rehob (after 1026 B.C.; 2 Sam. viii. 9). Hamath was evidently the capital of a state within whose boundaries were other towns, like Karkar, Riblah (2 Kings xxiii. 33), and Libo (Judg. iii. 3, Gk. version; Antonine Itinerary, 198.3; the modern Lebweh, as Olmstead has shown). It is doubtful whether Solomon exercised any authority north of this point. Irchuleni of Hamath was one of the allied kings against whom Shalmanezar III fought at Karkar in 854 B.C. One of his successors was Zakir, King of Hamath and La'ash, who conquered Bar Hadad II of Damascus c.800 B.C., according to the inscription found by Pognon in 1903 and published by him in 1907. In 2 Kings xiv. 28, the text is too corrupt to permit any conclusion as to the author's thought, and the passage cannot be used to prove a conquest of Hamath by Jeroboam II of Israel. Ini-ilu of Hamath paid tribute to Tiglath-pileser IV in 730 B.C., who annexed 19 districts of the land to Assyria. Sargon conquered Hamath in 720 B.C. and flayed King Yaubidi alive. According to 2 Kings xvii. 24-30, Hamathites were transported to Samaria, where they introduced the worship of the goddess Ashima. Hamath belonged successively to the Assyrian, the Chaldean, the Persian, and the Seleucid kingdoms. In the Hasmonean period Jonathan, the Judean high priest, marched with an army into the country of Hamath for the defense of Demetrius. Hamath submitted peaceably to Abu Ubaida, the Moslem leader, in 639, and the Christian church was changed into a mosque. In the period of the

Crusades the Ismailians took possession of Hamath. Tancred conquered the city in 1108 and massacred the Ismailians; but the Christians lost it to the Turk Togtekin in 1115. In 1178 the city passed into the hands of Saladin. A flourishing period for Hamath was the reign of Abulfida (1310-31). (See **ABULFIDA**.) In 1812 Burckhardt visited the city and saw the famous stones covered with Hittite inscriptions, which have not yet been deciphered. (See **HITTITES**.) For the modern town, which has a population of about 45,000, see **HAMA**. Consult: Burckhardt, *Travels in Syria and the Holy Land* (London, 1822); Delitzsch, *Wo lag das Paradies?* (Leipzig, 1881); Winckler, *Alttestamentliche Untersuchungen* (ib., 1892); Olmstead, *Western Asia in the Days of Sargon of Assyria* (New York, 1907); Pognon, *Inscriptions Sémitiques* (Paris, 1907); Benzinger, in *Baedeker's Palestine and Syria* (Leipzig, 1912); Ed. Meyer, *Geschichte des Altertums* (3d ed., Stuttgart, 1913).

HAMBACH, hām'bāg. A village of the Bavarian Palatinate situated on the Hardt, 15 miles west of Speyer. Its chief industry is the production of wine. Pop., 1900, 2244; 1910, 2273. The ruins of Hambacher Castle are famous chiefly on account of the Hambacher Fest, a revolutionary meeting which took place here on May 27, 1832, attended by about 30,000 persons. This gathering marked the beginning of an open republican movement and was followed by a series of reactionary measures by the Bavarian government. Most of the leaders of the gathering were compelled to seek safety abroad and some were imprisoned.

HAM BEETLE. A cosmopolitan beetle (*Necrobia rufipes*) of the family Cleridae, also called "red-legged ham beetle," which is particularly abundant in the southern and western United States and occasionally ruins many hams in the packing houses and storehouses. The injury is generally due to careless packing or to the accidental cutting or cracking, or even to a considerable stretching or fraying, of the canvas covering of the hams. It is a small, rather slender beetle of dark-bluish color, with reddish legs. Its larva is a slender grub, white at first, with a dark head and two small hooks at the end of the body. When full-grown, it is grayish white with a series of brown patches above. It transforms to pupa within a paper-like cocoon. There are several generations each year, and the winter is passed both in the larval stage and as an adult.

HAM'LET, PRINCE OF DENMARKE. **HISTORIE** OF. The probable source of Shakespeare's *Hamlet*, an English translation of one of Belleforest's *Histoires tragiques*, which in their turn were copied from Bandello's tales. The French version was published in 1570 and was at once extremely popular in England; the translation was made before 1596, possibly by 1589. See **AMLETH**.

HAM'BLIN, JOSEPH ELDRIDGE (1828-70). An American soldier of the Civil War, born at Yarmouth, Mass. Long a member of the Seventh Regiment of the New York militia, he enlisted in 1861 as adjutant in Duryea's Zouaves and served in Virginia under Butler, McClellan, Meade, Grant, and Sheridan in the Sixty-fifth New York. He especially distinguished himself at Cedar Creek, where he was wounded. He was brevetted brigadier general and in 1865 promoted to full rank, with the brevet of major

general, for his gallantry at Sailor's Creek. After the war he was prominent in the New York National Guard.

HAMBLIN, THOMAS SOWERBY (1800-53). An American actor, born in Pentonville, London, England. As a member of the Sadler's Wells Theatre Company, he won some success in London, especially at Drury Lane in 1820. In 1825 he came to America and soon gained a reputation as an actor in New York City. In 1830, after extended American tours, he and James H. Hackett leased the Bowery Theatre in New York City and soon after gained entire control of it. He lost heavily when this theatre was burned in 1836, was not very successful in an English tour, and later became manager of the second and of the third Bowery Theatre. The Park Theatre was burned during the first year of his management (1843). "Handsome Tom Hamblin," as he was generally called, was an excellent actor, though somewhat uneven; a liberal manager; an excellent business man; and a great favorite with the public. Hamblin's principal rôles were Hamlet, Macbeth, Othello, Rollo, and Pierre.

HAMBOURG, hăm'buŕg, MARK (1879-). An English pianist, born in Boguchar (southern Russia). He studied the piano with his father and made such amazing progress that at the age of 12 he gave recitals which attracted the attention of serious musicians. Upon the advice of Leschetizky, in 1891, he placed himself for three years under that famous master and reappeared on the concert stage in 1894 in Australia. The next year he was a soloist at the concerts of the Vienna Philharmonic Society, where he created a furore; this was repeated the following year (1896) in London. In 1900 and 1902 he visited the United States. Those who remember Rubinstein claim that Hambourg is temperamentally akin to the great Russian master. At any rate, he belongs to the pianists of the first rank. His memory is prodigious; he has over 30 concertos and about 600 solo pieces in his repertory.

HAMBURG, hăm'buŕg, Ger. hăm'burk. One of the constituent states of the German Empire, officially called Freie und Hansestadt Hamburg (Free and Hansa City Hamburg). The greater portion lies on the lower Elbe between the Prussian provinces of Schleswig-Holstein, on the north, and Hanover, on the south. It is divided into the metropolitan district (city of Hamburg) and four domains, viz., the Marschlande, the Geestlande, Bergedorf, and Ritzbüttel with Cuxhaven. The state includes several small enclaves in Holstein, several islands in the Elbe, the commune of Moorburg (within Hanover), and the island of Neuwerk, in the North Sea, about 5 miles from Cuxhaven. The area of the state is 414.5 square kilometers (160 square miles), of which 76.9 square kilometers (29.7 square miles) are comprised in the city of Hamburg and 77.8 square kilometers (30 square miles) in the Ritzbüttel with Cuxhaven domain, at the mouth of the Elbe.

Of the total area, there were, in 1900, 200 square kilometers of arable land and garden, 31 of meadow, 72 of pasture, and 18 of woodland. In 1913 rye was cultivated on 2608 hectares, wheat 945, potatoes 1053, oats 3456, and hay 2926. Live stock, Dec. 2, 1912: horses, 21,003; mules and asses, 36; cattle, 12,468; sheep, 2376; swine, 27,628; goats, 6694; fowls, 192,110.

Under its constitution (dating from 1861 and revised in 1879 and 1906) Hamburg is a republic, with the government residing in two chambers, the Senate and the House of Burgesses. The Senate, to which the executive power is chiefly intrusted, is composed of 18 members elected for life by the House of Burgesses. One-half of the senators must have studied law or finance, while at least seven of the remainder must belong to the class of merchants. A chief and second burgomaster, elected annually, preside over the Senate; no burgomaster can be in office for more than two years consecutively. The legislative power resides in the House of Burgesses, upon whose acts, however, the Senate has the right of veto except in matters of taxation; in case of constitutional conflict appeal lies to a joint board of arbitration or to the Supreme Court of the Empire at Leipzig. The burgesses are 160 in number, elected for six years—80 by all taxpayers, 40 by house owners in the city of Hamburg, and 40 by certain specified notables (active or former burgesses, jurists, etc.). The state is represented by one member in the Imperial Bundesrat and by three members in the Reichsrat.

On Jan. 1, 1882, the jurisdiction of the German Zollverein was extended to the lower Elbe, so that the Free Port of Hamburg was restricted to the city and port; in 1888 the rest of Hamburg was taken into the Zollverein, except the Free Harbor, which consists of the port proper and the warehouses for goods in bond. It should be added, however, that a small area at Cuxhaven is still outside the Zollverein. The Free Harbor has an area of 10.20 square kilometers, with 9730 inhabitants in 1910; the free area at Cuxhaven, 0.56 square kilometer, with about 500 inhabitants.

Expenditures and the public debt have greatly increased in recent years. The budget for 1913 showed estimated receipts and expenditures of 170,774,860 marks respectively. Public debt, Jan. 1, 1913, 774,792,838 marks; the debt is largely offset by productive public property, as the harbor and its equipment.

The population of the city and of the State of Hamburg, according to censuses taken December 1, and the increase per cent for the state, are shown below:

YEAR	City	State	Increase
1867.....	271,200	306,507
1871.....	302,082	338,974	10.92
1880.....	412,314	453,809	16.70
1890.....	573,198	622,530	20.04
1895.....	625,552	681,632	9.49
1900.....	705,738	766,349	12.72
1905.....	802,793	874,878	13.86
1910.....	931,035	1,014,664	15.98

Of the state total in 1910, 929,758 (91.63 per cent) were returned as Evangelicals, 51,030 (5.03) Roman Catholics, 4255 (0.42) other Christians, 10,472 (1.02) Jews, and 10,143 others. In 1911 public primary schools numbered 222, with 2182 male and 1339 female teachers and 115,607 pupils; higher schools, 20, with 14,400 students. The only towns of importance, besides the city of Hamburg, are Bergedorf (with 14,907 inhabitants in 1910), Cuxhaven (14,888), and Ritzbüttel (3140).

HAMBURG. A city in the State of Ham-burg, after Berlin the largest city of the German

Empire. It is situated in lat. 53° 33' N. and long. 9° 50' E., on the right bank of the northern arm of the Elbe, 75 miles from its mouth at Cuxhaven and 178 miles by rail northwest of Berlin (Map: Germany, D 2 and G 5). Contiguous with Hamburg on the west is the Prussian city of Altona (which includes Ottensen). The river front of Hamburg and Altona extends about 6 miles. Hamburg is the largest port on the Continent and, after London and New York, the largest in the world. Its climate is damp, mild in winter and cool in summer. The mean annual temperature is over 46° F.; rainfall, 28 inches. The city consists of two radically different parts. The central part—since the disastrous fire of 1842 reconstructed according to modern ideas—with broad, well-lighted, well-drained streets, and fine, lofty houses, offers a striking contrast to the remaining part, much of which is devoted to wholesale business and is intersected by canals, along which goods are conveyed in lighters to and from the warehouses. The ancient ramparts, converted into gardens and walks, constitute an inner parklike girdle, separating the old city from its newer parts, in most of which attractive villas may be found. The beauty of the city is greatly enhanced by two large sheets of water formed by the Alster and known as the Binnen-Alster, or Alsterbassin, and Aussen-Alster. They are surrounded by good hotels, handsome private houses, and fashionable promenades. Two splendid bridges span the Elbe, over 60 bridges span the canals in the city, and there are numerous steam ferries. The harbor, with its vast traffic, is one of the sights of the city, and splendid views of it are to be had from different elevations. Of the several fine public buildings, the most noteworthy are the Exchange, containing a commercial library, with over 120,000 volumes; the Rathaus, an elaborate structure in Roman Renaissance, completed in 1897; the Seewarte (the buildings of the German Meteorological Station); and the Deutsches Schauspielhaus, completed in 1900. Hamburg has 35 churches. The church of St. Nicholas (1845-74), built from designs by Sir Gilbert Scott, at a cost of \$1,000,000, as a memorial of the fire of 1842, is a fine Gothic building, with a spire 482 feet high; excepting Ulm and Cologne, it is the loftiest church building in the world. St. Michael's (1750-62), in the Renaissance style, is also distinguished by a lofty spire (431 feet). St. Catharine's, dating from the fifteenth century, is archaeologically interesting, being one of the few churches that escaped the fire.

Among the streets of Hamburg the Jungfernstieg is the most famous and the busiest thoroughfare. The Alter Jungfernstieg and the Neuer Jungfernstieg are handsome quays, which bound the Alsterbassin. The Neuerwall and the Alterwall, near the Exchange, are the centre of commercial life, and the Rödingsmarkt and the Katharinenstrasse contain fine old residences. Of the new streets, the Kaiser-Wilhelm-Strasse, opened in 1892, is the most important. The Anlagen are a fine public promenade, laid out on the site of the old fortifications, and the Sandthorkai and the Kaiserkai, where the large steamships lie, are the most prominent quays along the Elbe. Hamburg is not rich in public monuments. The statue of Lessing, by Schaper, the monument to the sons of Hamburg who fell in the war of 1870-71, by Schilling, and the Hansa fountain, deserve mention.

Situated on a low plain, far from any mountains, the city derives its drinking water from the Elbe. Formerly this was so polluted that Hamburg suffered from cholera epidemics more than any other city in northern Europe; but from 1893, when a newly devised and enormous filtering plant was put into operation, there was no recurrence of the epidemic until 1905, when there was a slight outbreak. A well-constructed sewerage system drains the city perfectly, discharging the refuse into one sewer tunnel which empties into the river with the outgoing tide. Garbage is burned in municipal crematories erected in 1893. The streets are well paved with asphalt or smooth square stones and are kept very clean, the principal ones being washed and swept every day, and the less frequented ones cleaned a few times a week. The struggle against cholera epidemics led the city authorities to revise also the building regulations. This was necessitated by the fact that the poorer classes of the population are housed in the mediæval portion of the town, in crowded houses facing narrow streets and small, poorly ventilated courts; a considerable part of them (6½ per cent in 1890) lived in cellars. The new rules require more sanitary arrangements and, in case of cellars, more light and better safeguards against dampness.

Hamburg has a large number of hospitals, the most noteworthy being the Epidemic Hospital, opened in 1894, and considered one of the best in the world. Connected with the hospitals are stations equipped with large ovens for disinfection by heat of all kinds of household goods. Food inspection is in charge of the Hygienic Institute, where a thoroughly equipped bacteriological laboratory is maintained. A special sanitary service is maintained in the harbor, to see that all the sanitary regulations are complied with on incoming ships. Municipal baths and washhouses were established in 1855. The establishments are built and run after the British model. (See LIVERPOOL; GLASGOW; MANCHESTER; ETC.) The effect of all these measures is seen in the diminished death rate, which declined from 30 per 1000 in 1865 to less than 20 in 1895, about 15.8 in 1904, and about 14.3 in 1912. In the latter year the birth rate was about 22.7. Hamburg owns both its gas works and electric plant; but they are operated by a private company paying the city a high rental and rendering excellent service under the strict supervision of the city authorities. The street cars are also in the hands of private companies, who pay the city a tax of one pfennig per passenger, in addition to all ordinary taxes levied by the city, besides keeping the streets in repair within the limits of 1 or 2 feet on either side of the tracks. At the expiration of the charter the property of the company reverts to the city. Electricity has supplanted the use of horse power. There is also a line operated by steam, belonging to the Prussian government, and connecting the various railway depots in the city. The fares range from 2½ cents upward, according to class and distance. The charitable institutions are numerous and well endowed. For the purposes of poor relief, the city is divided into 11 districts, which are in turn subdivided into 115 smaller districts. The work of relief is administered by a charity board, composed of three senators and 15 members of the House of Burgesses, elected for five-year terms. There are also a great many

private societies and asylums for the relief or reception of needy persons. Besides the hospitals mentioned above, there are two general hospitals, a seamen's hospital, a hospital for tubercular diseases, an establishment for the insane, with an agricultural colony at Langenhorn (1893), and other special institutions.

There are several large and excellent private schools, nearly 200 public schools, a school of art, and conservatory of music, in addition to two Gymnasias, one Realgymnasium, and other secondary schools. The city also maintains a correctional school (Strafschule), to which children may be sent for periods of from eight days to eight weeks, an orphan school, a school for deaf and dumb, and one for the blind. There are, besides, schools for technical instruction, building construction, machine building, navigation, and pharmacy. The municipal library contains over 380,000 volumes and over 7000 manuscripts. The Kunsthalle, or public art gallery, is an important edifice in early Italian Renaissance. Its collection of paintings is extensive, but third-rate. The Natural History Museum is excellent, as is also the Industrial Art Museum. An observatory, botanical museum and gardens, a fine zoological museum, and state laboratory are among many other institutions of a scientific or educational nature; there are also several theatres and a great number of public gardens and places of amusement. The first German theatre for opera was established in Hamburg in 1678.

The geographical situation of Hamburg makes it the commercial emporium of northern Europe. Through the Elbe, with its numerous branches and canals, ships leaving Hamburg can reach the heart of Germany; it is also the terminus of seven lines of railway, which furnish direct communication with all the German cities. In 1888 the city of Hamburg (except the Free Port) became a member of the German Customs Union. This stimulated its trade still further, and about 1890 new docks were constructed at Cuxhaven for ocean steamers, involving an expenditure of \$40,000,000. The dock and harbor facilities are the most complete in the world; vessels drawing 23 feet can go up the harbor at high tide. The number and tonnage of seagoing vessels entering the port have been as follows: in 1880, about 6000 vessels, of 2,800,000 tons; in 1890, about 8000, of over 5,000,000 tons; in 1905, 15,118, of 10,382,000 tons; in 1912, 15,774, of 13,567,913 tons. In 1880 the merchant marine of Hamburg numbered 475 vessels, of 231,000 tons; in 1890, 587, of 538,000 tons; in 1905, 1087, of 1,362,000 tons; in 1912, 1320, of 1,794,302 tons (of which 765, of 1,538,742 tons, steam).

The leading imports by sea include coffee, wool, grain, cotton, hides and skins, yarn, tobacco, iron, machinery, and wine; the principal exports by sea include sugar, coffee, woollens, cottons, ironware, hosiery, machinery, paper, and tobacco. Hamburg is one of the largest coffee marts and in money-exchange transactions is among the foremost cities of the world. It is also one of the principal emigration ports of Germany. Among the principal industries are cigar making, spirit and sugar refining, brewing, meat curing, machine and ship building, coffee roasting, chocolate manufacture, flour milling, the manufacture of furniture, pianos and musical instruments, mechanical and optical apparatus, leather, ivory, celluloid, etc.

The following table shows, in millions of marks, Hamburg's imports and exports of merchandise in 1903 and 1912, by sea and by the railways and the lower Elbe; it also shows the share of the leading countries in the oversea trade:

	IMPORTS		EXPORTS	
	1903	1912	1903	1912
By sea.....	2,397.6	4,607.4	2,025.5	3,631.2
By railways and lower Elbe.....	1,637.4	3,171.2	1,522.4	3,115.6
Total.....	4,035.0	7,778.6	3,547.9	6,746.8
United States.....	437.3	680.6	260.2	424.3
United Kingdom.....	421.4	665.1	472.7	522.4

Belgium.....	30.4	30.0	27.7	52.2

Hamburg is the seat of the upper Hanseatic court and of the three provincial courts of Bremen, Hamburg, and Lübeck.

Hamburg virtually has a municipal fire-insurance institution, making insurance compulsory for every householder; it also subsidizes a private employment bureau and maintains a municipal pawnshop, established in 1650.

The 1910 census disclosed a population of 931,035 (returns of previous censuses are shown in the preceding article); 1910, 985,779. Important districts of the city which lie outside of the old city proper include: Borgfelde (pop., 34,200); Hohenfelde (31,200); Uhlenhorst (41,140); Rotherbaum (31,350). The population of Altona (which is contiguous with Hamburg and includes Ottensen) was 172,628; population of the two cities, 1,103,663. Hamburg and Bremen are the chief emigration ports of Germany. Emigrants from Hamburg in 1903 numbered 144,560 (of whom 20,238 German); in 1911, 86,895 (6507).

Somewhere between 805 and 811 Charlemagne is said to have founded the castle of Hamburg as a defense against the heathen Slavs. In 831 an episcopal see was erected there (soon to be united with that of Bremen), and Hamburg became a centre of civilization for north Europe. The town was repeatedly burned and plundered by Norsemen, Danes, and Slavs. In 1189 it received important commercial privileges from Frederick Barbarossa. By treaties with Lübeck and Bremen, in 1241 and 1249, it initiated the Hanseatic League (q.v.). From that time it increased rapidly in wealth and commercial importance, augmenting its territory by the purchase of the township of Ritzbüttel, at the mouth of the Elbe (where the harbor of Cuxhaven is now situated), and several villages and islands in the vicinity of the town. Under the protection of the German emperors Hamburg soon became powerful enough to defend itself and its commerce, both by sea and land, and carried on war for a considerable period against the Dutch and the Danes, though with varying success. Maximilian I declared Hamburg an Imperial city in 1510, though the act was not

confirmed by the Imperial Chamber till 1618. In 1529 the city officially adopted the Reformed religion, and the large number of religious refugees from the Iberian Peninsula and Holland enriched it greatly during the sixteenth and seventeenth centuries. Its commerce developed wonderfully, owing to the American and French revolutions, the wars between England and France, and the downfall of the trade of the Netherlands. It was occupied by the French after the battle of Lübeck, in 1806. Napoleon's continental system, however, proved fatal to its commerce, especially after 1810, when it was made a part of the French Empire. In 1813-14 the city endured a terrible reign of pillage and oppression at the hands of the French general Davout. By 1814 its population had sunk from 100,000 to 55,000. In 1815 it entered the German Confederation as a free city of the Empire. It thrived exceedingly, in spite of a disastrous fire which swept off a quarter of the city in 1842. After forming part of the North German Confederation, Hamburg became a member of the German Empire in 1871. Jealousy of its commercial privileges kept Hamburg out of the Zollverein till 1888. In 1892 a severe outbreak of cholera killed nearly 9000 of the inhabitants.

J. Clapp, *The Port of Hamburg* (New Haven, 1911); Richard Linde, *Die Niederelbe* (4th ed., Bielefeld, 1913).

HAMBURG, hām'būrg. A breed of domestic fowls, noted as economical egg producers. They are of trim build, resembling Leghorns, and of great beauty of plumage. Six varieties are recognized—the golden-spangled, silver-spangled, golden-penciled, silver-penciled, black, and white. The large black redcap and the Dutch campine are also in this class. The designations refer to the markings. The "spangles," or "moon eyes," are round or oval spots; the "pencilings" are bars of reddish bay or black, or of clear silvery white and black. The most popular varieties are the spangled (see Colored Plate of POULTRY), because of their fine form as well as beauty of coloration. Their "points" are as follows: Comb, square at front, tapering nicely into a long spike, full of points by no means plain, firmly and evenly set on the head; face, red; ear lobes, moderate size, round as possible, and clear white; legs, leaden blue; carriage, graceful; plumage, very profuse. (Thus far the specifications belong to the whole Hamburg breed.) Silver-spangled cock: Color, clear, silvery-white ground, every feather tipped or spangled, the breast as bold as possible, but showing the spangle, the bars of the wing regular and bold; neck, back, and saddle nicely tipped; bow well marked (by no means cloudy, brown, or brassy); back as green as possible. Silver-spangled hen: The white clear and silvery, the spangles large, green as possible, distinct and clear. Golden-spangled cock: Ground, rich; clear spangles, large and distinct. Hen: Color, very black and rich ground, the back glossy green; the neck, back, and saddle nicely striped; bow of wing well marked.

VOL. X.—40

HAM'DEN. A town in New Haven Co., Conn., 5 miles north of New Haven, on the New York, New Haven, and Hartford Railroad (Map: Connecticut, D 4). It is in a fertile agricultural region and has some manufactures. Pop., 1900, 4626; 1910, 5850.

HAMDI BEY, hām'dé bā, OSMAN (1842-1910). A Turkish statesman and scholar, son of Edhem Pasha, born in Constantinople and educated in Paris. He was Governor of Bagdad (1868-70), a delegate to the Vienna Exposition in 1873, General Secretary of Foreign Affairs, then Governor of Pera, in 1882 director of the Imperial museums at Stambul, and (1888) connected with the Department of the National Debt. A painter, with some reputation for his rendering of Oriental interiors, he founded in 1882 a Turkish Ecole des Beaux-Arts, which is not limited in its courses by the provisions of the Koran. He edited with Reinach *La nécropole royale de Sidon* (1892-93), and built at his own expense, near the Tchini Kiosk, a Greek building in Constantinople, in which the sarcophagi from the Sidon Necropolis might rest.

HAMEL, GUSTAV (1889-1914). A British aviator, educated at Westminster. He took up aviation in 1910 and soon became one of the most expert and daring of airmen. He won the Brooklands to Brighton air race in 1911 and represented England in the Gordon Bennett trophy race for that year. He won the first Aerial Derby in a flight around London in 1912 and also won the *Daily Mail* prize in 1913 in a race around Greater London, making 94½ miles in 1 hour, 15 minutes, and 49 seconds. On his return trip to London from Paris in a new Morane-Saulnier monoplane he was lost in the English Channel in May, 1914. He published *Flying: Some Practical Experiences* (1914).

HAMEL, a'mel', LOUIS ERNEST (1826-98). A French historian and politician, born in Paris. He was educated at the Lycée Henri IV and in the law school of the University of Paris; but he practiced little, preferring literature and politics. He was a contributor to the *Liberal* sheets, was an editor of *L'Homme libre*, was three times defeated as candidate for the National Assembly, but in 1878, 1881, and 1884 was elected to the Parisian municipal council. Besides his earliest work, *Les derniers chants*, a book of verse (1851), his writings are historical: *Histoire de Saint-Just* (1859); *Histoire de Robespierre* (1865-67), in three volumes, of which the publishers refused, for fear of prosecution, to publish the last two volumes until they were compelled to do so at their own risk by legal decision; *Monsieur Michelet, historien* (1869); *Précis de l'histoire de la révolution française* (1870); *Histoire de la république française sous le Directoire et sous le Consulat* (1872); *Histoire des deux conspirations du général Malet* (1873); *Histoire illustrée du second Empire* (1873); *Souvenirs de l'homme libre* (1878); *Histoire du premier Empire* (1882); *Histoire de la Restauration* (1887); *Histoire du règne de Louis Philippe* (1889); *Histoire de la seconde République* (1891); *Histoire du second Empire* (1893-94).

HAMELIN, hām'e-līn, THE PIED PIPER OF. See PIED PIPER OF HAMELIN.

HAMELIN, hā'mēln. The capital of a district in the Prussian Province of Hanover, situated at the confluence of the Hamel with the Weser, 25 miles southwest of Hanover. The

Weser is crossed by a large suspension bridge. The town contains many specimens of mediæval and Renaissance architecture, including old churches and the so-called "Hochzeitshaus." It has a large Gymnasium, an agricultural and dairy school, and a school for navigation. The chief manufactures are paper, leather, carpets, chemicals, tobacco, sugar, textiles, castings, and ships. The commerce is quite important, and the harbor supports large salmon fisheries. Hameln is noted on account of the legend of the Pied Piper of Hamelin (q.v.).

Hameln had its origin in the ninth-century abbey of St. Boniface. It was sold to the Bishop of Minden in 1259, but the transaction did not meet with the approval of the townspeople, who after a bloody battle placed themselves under the protection of Brunswick. The town was a flourishing member of the Hansatic League. It was taken by the Swedes in 1633 and surrendered to the French in 1757 and in 1806. It finally passed to Prussia in 1806. Pop., 1900, 18,905; 1910, 22,061.

HAMERIK, hä'me-rik, ASGER (1843-1923). A Danish composer. He was born at Copenhagen and, despite the opposition of his parents, studied music unaided, and when but 15 years of age had so far succeeded in his ambition as to be able to study openly, under Gade, Matthiison-Hansen, and Haberhvier. In 1862 he went to Berlin to become a pupil of Von Bülow, and two years later, when studying in Paris, met Berlioz, with whom he visited Vienna (1866-67). His *Hymne de la paix*, written for the Paris Exhibition, earned for him a gold medal and was greatly esteemed for its splendid orchestration. He wrote several operas, which were produced either in France or Italy, and in 1871 was appointed director of the Peabody Conservatory of Baltimore and also of the Peabody symphony concerts. In 1890 the King of Denmark conferred upon him the honor of knighthood. In 1898 he resigned his post in Baltimore and returned to Europe. Among his more important works are the operas *Der Wanderer* (1872) and *La Vendetta* (1870); the choral works *Christliche Trilogie* and *Jüdische Trilogie*. The operas *Tosca* and *Hjalmar and Ingeborg* were given only in part. He also composed five symphonies and much successful chamber music.

HAMERLING, hä'mër-ling, ROBERT (1830-89). An Austrian poet, dramatist, and novelist, born March 24, 1830, at Kirchberg am Walde in Lower Austria. For four years he was a choir boy at the Cistercian monastery of Zwettl. Later he went to a Gymnasium in Vienna and afterward matriculated for the study of medicine. Besides natural science, Hamerling cultivated classical and Oriental languages and also philosophy. In 1855 he became a professor in Trieste, but 10 years later chronic illness forced him to withdraw. An Imperial decree now granted him a pension, and he was likewise assisted by a Viennese lady. On July 13, 1889, after years of pain, he died in his villa near Graz. Hammerling's style is rich and highly colored, his ideas are daring and keen. His mastery over his language is notable. Among his many writings some of the most striking are, in lyric poetry: *Ein Sangesgruss vom Strande der Adria* (1857); *Sinnen und Minnen*, youthful poems (1859, 1886); *Gesammelte kleinere Dichtungen* (1871, 1890); *Blätter im Winde* (1887, 1888); in epic poetry:

Alasver in Rom (1886; 27th ed., 1902), a description of Nero's Rome; *Der König von Sion* (1868, 1890); *Amor und Psyche* (1882); *Homunculus* (1880, 1890); in the drama: *Danton und Robespierre*, a tragedy (1871, 1877), and the comedy *Lord Lucifer* (1880). He wrote also *Aspasia* (1876), a novel of the time of Pericles, and a cantata *Die sieben Todsünden* (1873). Selections from his *Works* appeared in 1901. Consult: Kleinert, Robert Hamerling, *Ein Dichter der Schönheit* (Hamburg, 1889); Polzer, Robert Hamerling: *Sein Wesen und Wirken* (ib., 1890); Rabenlechner, Hamerling: *Sein Leben und seine Werke* (ib., 1895); id., *Hamerling* (Dresden, 1902); and the autobiography, *Stationen meiner Lebenspilgerschaft* (1889).

HAMERTON, PHILIP GILBERT (1834-94). An English writer on art, painter, and etcher. He was the son of a solicitor and was born at Laneside, near Shaw, Lancashire. His mother died when he was an infant, and his father, who was an inebriate, died 10 years later. For these and other reasons Hamerton's boyhood was lonely. He gave up in displeasure his preparation for Oxford, turned to poetry and art, and began writing for the reviews. He traveled in Wales, visited France, and in 1857 began his periodic encampments on an island in Loch Awe in the Scottish Highlands, described in *A Painter's Camp in the Highlands and Thoughts about Art* (1862). This notable work was followed by the more technical *Etching and Etchers* (1868); *Contemporary French Painters* (1868); *Painting in France after the Decline of Classicism* (1869). In 1869 he founded the *Portfolio*, an excellent art magazine, which he edited till his death. Among his other numerous writings are: *The Intellectual Life* (1873); *Life of Turner* (1879); *The Graphic Arts* (1882); *Human Intercourse* (1884); *Landscape* (1885); *French and English* (1889). Hamerton, who had married a Frenchwoman, passed his latter years in France and died at Boulogne-sur-Seine. Like Ruskin, Hamerton was an art interpreter to his generation, the medium between the artist and the public. For this he was eminently suited because of the catholicity of his taste and his agreeable style. Consult Philip Gilbert Hamerton: *An Autobiography and a Memoir by his Wife* (London, 1896).

HAMESUCKEN. See HAINESUCKEN.

HAMI, hü'më, or **KHAMI**, kü'më, or **KOMUL**, kö'mül. A small town of Chinese Turkestan, situated in a fertile district 30 miles south of the east end of the Tien-shan, or "Celestial Mountains," near the northern verge of the desert of Gobi, about 60 miles southeast of Barkul (Map: China, F 3). Its elevation above the sea is about 3000 feet. The oasis of Hami, which has an area of between 80 and 100 square miles, produces wheat, barley, maize, millet, pumpkins, watermelons, and excellent grapes. The poppy is also grown. The "town" consists of an old town (Loacheng), built about two centuries ago, and a new town (Sin, or Hsin, Ch'eng), surrounded with moated walls, 20 feet in height, pierced with four gates, each surmounted with a tower in true Chinese style. The Mohammedan quarter, built over 300 years ago and called Khamil, is about a mile off. It is surrounded by a mud wall and contains some 250 to 300 families. Here the kings of Hami lie in a mausoleum, the dome of which is covered with green-colored tiles. The population of the old town is said to be about 5000. Hami is

advantageously situated as a trade centre, as here the great travel route from the east to west forks into two branches—one, the Tien-shan Nanlu, running along the south side of the Celestial Mountains to Kashgar and Yarkand; and the other, the Tien-shan Pei-u, proceeding by an easy pass 9000 feet high over the mountains along their northern foot to Kulja and beyond.

HAMILCAR (Phœnician, servant of Melkart, Gk. *Ἀμίκας, Amilkas*). A name borne by several distinguished Carthaginians, the most celebrated of whom were: 1. The commander of the great Sicilian expedition 480 B.C. (See **CARTHAGE**; **SICILY**, *History*.) 2. One of the commanders of a Carthaginian army defeated by Timoleon (q.v.), the Corinthian general, at the Crimissus 339 B.C. 3. (Surnamed Rhodanus), the Ambassador to Alexander the Great after the fall of Tyre (332 B.C.). 4. Governor of Sicily (317 B.C.). 5. The son of Gisco, who succeeded the preceding and carried on military operations against Syracuse and other states with great success, but was at length taken prisoner and put to death (309 B.C.). 6. A commander during the First Punic War, who was very successful against the Romans by land in Sicily, but was afterward defeated in a sea fight off Ecnomus (256 B.C.) and was thereafter recalled to Africa to oppose Regulus.

7. The greatest of all was Hamilcar, surnamed Barca, or Barak, 'lightning' (c.270-228 B.C.). While very young, he was appointed to the command of the Carthaginian forces in Sicily, in 247 B.C., at which time the Romans had possession of almost the whole island. Hamilcar's first care was to discipline his infantry thoroughly; he then established himself on Mount Hercte (Ercte) and from this point made pillaging excursions in all directions, sending his privateers along the coast of Italy as far north as Cumæ, thus obtaining abundant supplies for his troops. From this position the Romans endeavored to dislodge him, but in vain. After three years he left Hercte and established himself on Mount Eryx, keeping up his communication with Drepanum and the sea, where the same tactics were repeated on both sides, and with the same want of success on the part of the Romans. The Carthaginian admiral, Hanno, having been totally defeated off the Ægates Islands (241 B.C.), Hamilcar was compelled to evacuate his fortress and abandon Sicily. While Hamilcar was engaged in Sicily he had made large promises to his mercenary troops which, after his return to Africa, he was unable, through lack of support from the government, to fulfill; they revolted in consequence and were joined by some of the African tribes. Hanno (see **HANNO**, 5) endeavored to suppress the revolt, but failed; Hamilcar was accordingly appointed to the command and succeeded in utterly defeating the rebels, capturing all their towns and putting to death their leaders. Hamilcar was next appointed commander in chief of the Carthaginian army and was engaged for some time in wars with the neighboring tribes, which were abruptly ended by Hamilcar's entering upon his Spanish campaign about 236 B.C. His great aim was to found a new empire in Spain, from which, as his basis, he might assail the Romans. Such a kingdom he saw would increase the power and wealth of his native country and atone to her for the loss of Sicily and Sardinia. This end he did not himself accomplish, but he prepared the way for

its accomplishment by his son-in-law Hasdrubal and his son Hannibal. He marched westward, while the fleet under Hasdrubal cruised along the coast; he then crossed the Strait of Gibraltar and made war on the natives of Spain, in the course of which he penetrated to the very heart of the country, subdued many tribes and cities, and amassed immense wealth. He spent nine years in Spain and at length (228 B.C.) met his death while fighting against the Vettones. His military genius is thought scarcely inferior to that of Hannibal. His life by Cornelius Nepos is extant. Consult Dodge, *Hannibal* (New York, 1891), and the article "Hamilcar," in Pauly-Wissowa, *Real-Encyclopædie der classischen Altertumswissenschaft*, vol. vii (Stuttgart, 1912). See **CARTHAGE**; **HANNIBAL**; **ROME**, *History*; **SCIPIO**.

HAM'ILL, HOWARD MELANCTHON (1849-1915). An American clergyman and leader in Sunday-school work. He was born at Lowndsboro, Ala., graduated from East Alabama College in 1868, and served in the army of Gen. R. E. Lee in 1864-65. He entered the ministry of the Methodist Episcopal church in 1885, but later joined the Methodist Episcopal Church South, and was placed in charge of the Sunday-school-teacher training of that denomination. For some time a trustee of the International Sunday School Association, at the convention held in Chicago in June, 1914, he was elected its president. He is author of several books and pamphlets relating to Sunday-school work.

HAMILTON. The capital of Dundas and Normandy counties, in the western district of Victoria, Australia, on Grange Burn Creek, 50 miles northeast of Portland, and 198 miles west of Melbourne, with which it has railway connection (Map: Victoria, B 5). It is a pastoral, agricultural, and stock-raising centre, with important semiannual exhibitions and race meetings. It has a large export trade in frozen mutton. It is an educational centre for a large area and contains several good denominational institutions. Pop., 1911, 5000.

HAMILTON. The capital of the Bermudas (q.v.), situated on Hamilton Island. Pop., 1901, 2246; 1911, 2627.

HAMILTON. The capital of Wentworth Co., Ontario, Canada, and port of entry on Burlington Bay, at the southwest extremity of Lake Ontario, 39 miles southwest of Toronto, on the Grand Trunk, the Canadian Pacific, and the Toronto, Hamilton, and Buffalo railroads (Map: Ontario, E 7). There are also three electric radial railways. The city has a fine harbor protected by a sand bar 5 miles in length, daily steam communication with lake ports, and an extensive trade with the Maritime Provinces. Hamilton is the centre of west Ontario's fruit district. Owing to the large investment of American and British capital, an abundance of electrical power, derived from Decew Falls, 35 miles southeast of the city, cheap natural gas from the Welland field, and its excellent transportation facilities by both rail and water, Hamilton is one of the most important manufacturing centres of Canada. The output of its numerous industries comprises steel and iron goods, sewing machines, agricultural implements and machinery, glass, electrical wires, cables, and appliances, clothing, store fixtures, stoves, elevators, boots, furniture, cotton, woolen, and tobacco products, musical instruments, and many other manufactures, numbering in all about 400

establishments. The value of its manufactured output, which is next after those of Montreal and Toronto, was, in 1910, \$55,125,946, as compared with \$17,122,346 in 1900, an increase of 221.95 per cent. The United States is represented by a consul. The city sends two representatives to the Dominion House of Commons and two to the Provincial Legislature; it is the seat of Anglican and Roman Catholic bishops. There are four hospitals. The city, laid out in 1813 and incorporated in 1833, is built on a plateau, has wide streets, market and county-house squares, and many elegant residences. It is the seat of a provincial normal college, a conservatory of music, Highfield School, and a government lunatic asylum. Other features include the post office, customhouse, city hall, public library, Dundurn, Victoria, and other parks, a fine race course, boat, yacht, and bathing houses, and summer hotels. The city owns and operates its water works. Pop., 1891, 48,950; 1901, 52,550; 1911, 81,909; 1914 (local est., with suburbs), 100,000.

HAMILTON. A market town and municipal borough in Lanarkshire, Scotland, on the left bank of the Clyde, 11 miles southeast of Glasgow (Map: Scotland, D 4). The inhabitants are chiefly employed in neighboring coal and iron mines and limestones quarries; market gardening and muslin weaving are minor industries. The town is irregularly built on rising ground, commanding fine views. Its prominent structures are the burgh buildings with a clock tower 130 feet high, the county buildings, in the Grecian style, and the cavalry barracks. The town owns its gas and water works. It gives the title to the premier peer of Scotland, the Duke of Hamilton and Brandon, whose famous family seat, Hamilton Palace, in the midst of extensive pleasure grounds, is adjacent to the demesne of Cadzow Castle with the remains of its forest, where primeval oaks and a herd of the original breed of wild cattle are preserved. On the opposite bank of the river Avon is the summer chateau of Chatellerauld, built in 1732 by the then Duke of Hamilton, in imitation of the house whence he derived his French title of Duke. Two miles north of the town is the famous Bothwell Brig, where the Covenanters were defeated in 1679. Pop., 1901, 32,775; 1911, 38,644. Consult Grant, *The Commissariat Record of Hamilton* (Edinburgh, 1898).

HAMILTON. A village in Madison Co., N. Y., 29 miles southwest of Utica, on the New York, Ontario, and Western Railroad (Map: New York, E 5). It is the seat of Colgate University (q.v.), established in 1818, with the Hamilton Theological Seminary (Baptist). Lumber yards and a canning factory represent the leading industries. The water works and electric-light plant are owned and operated by the municipality. Pop., 1900, 1027; 1910, 1689.

HAMILTON. A city and the county seat of Butler Co., Ohio, 25 miles by rail north of Cincinnati, on the Great Miami River, the Miami and Erie Canal, and the Cincinnati, Hamilton, and Dayton, the Pittsburgh, Cincinnati, Chicago, and St. Louis, and the Ohio Electric railroads (Map: Ohio, A 7). The splendid water power derived from both the river and canal has materially aided the city's development as a manufacturing centre; its industrial establishments include breweries, paper, flour, and woolen mills, engine works, iron foundries, machine shops, large safe and bank-vault factories, felt, under-

wear, and tin-can factories, and agricultural-implement and tool works. The city contains the Notre Dame Academy, Hamilton Children's Home, and Mercy Hospital. The first settlement here was made in 1791, when Gen. Arthur St. Clair built a fort and called it Fort Hamilton in honor of Alexander Hamilton. Hamilton was first incorporated as a town in 1810. It is now governed, under the municipal code of 1902, by a mayor, chosen biennially, a council of nine members, chosen biennially, directors of public service and of public safety, sinking-fund trustees, appointed by the mayor, and the city solicitor and city auditor, elected by the people. The water works, gas plant, and electric-light plant are all owned and operated by the city. Pop., 1890, 17,505; 1900, 23,914; 1910, 35,279; 1914 (U. S. est.), 38,814; 1920, 30,075.

HAMILTON. A famous noble Scottish family of English origin. The name, obviously territorial, was doubtless taken from some one of the many English manors called Hamilton, scattered through Buckinghamshire, Hampshire, Surrey, Lancashire, Rutlandshire, Yorkshire, and Leicestershire. The pedigree of the family is traced to "Walter Fitz-Gilbert (or Gilbertson) of Hamilton," who in 1296 held lands in Lanarkshire and swore fealty to King Edward I of England as overlord of Scotland, and in 1314 kept the castle of Bothwell, on the Clyde, for the English. His early surrender of this strong fortress, and of the English knights and nobles who had fled to it from the field of Bannockburn, was rewarded by King Robert Bruce by grants of the lands and baronies of Cadzow and Machanshire in Clydesdale, Kinneil and Larbert in West Lothian, Kirkinner and Kirkoven in Galloway, and other lands forfeited by the Comyns and other adherents of England. He attained the rank of knighthood, and married Mary, a daughter of Sir Adam Gordon of Huntly, by whom he left two sons. To a long list of illustrious descendants accrued the titles, emoluments, and territories comprised in the lordships of Abercorn, Bargeny, Belhaven and Stentoun, Hamilton, Pisle, and Strabane; in the viscountships of Boyne, Clanboy, Hamilton, and Strabane; in the earldoms of Arran, Abercorn, (Janbrasil), Haddington, Orkney, Ruglen, and Selkirk; in the marquisesates of Abercorn and Hamilton; and in the dukedoms of Abercorn, Brandon, Chatellerauld, and Hamilton. The present leading representatives are Alfred, thirteenth Duke of Hamilton and Brandon, surname Douglas-Hamilton, premier peer of Scotland and hereditary keeper of Holyrood Palace, and James, second Duke of Abercorn, surname Hamilton, Groom of the Stole. Consult: Anderson, *Historical and Genealogical Memoirs of the House of Hamilton* (London, 1823); Fraser, *History of the Earls of Haddington* (Edinburgh, 1880); G. H. Johnston, *The Heralding of the Hamiltons* (ib., 1908).

HAMILTON, ALEXANDER (1757-1804). An eminent American statesman. He was born at Charles Town, in the island of Nevis, West Indies, on Jan. 11, 1757, and appears to have been the natural son of a Scottish trader named James Hamilton, who died on the island of St. Vincent about 1709, and Rachel Levine, originally named Faucette, and of French-Huguenot descent, who some time previously had separated from her husband. After a brief period of schooling, the future statesman at the age of 12—his mother having died in the previous year—was placed in a counting house at Christian-

sted, on the island of St. Croix; but having shown signs of literary ability, especially in a pamphlet describing a West Indian hurricane, he was sent to the English colonies on the continent when 16 years of age, for the purpose of continuing his education. Arriving in Boston in October, 1772, he proceeded at once to New York, studied for a year in a grammar school at Elizabethtown, N. J., and then entered King's College (now Columbia University). He soon became intensely interested in the controversy then raging between the Colonies and the British government and, partly as a result of a visit to Boston during the tension consequent upon the passage of the Boston Port Bill (q.v.), became firmly attached to the patriot cause. On July 6, 1774, he attended in New York a great meeting in the "fields" (now City Hall Park), assembled to take action on the calling of a general congress, and made extemporaneously an impassioned but well-reasoned speech, which brought him to the notice of men of prominence and of the people generally. Soon afterward he published anonymously two remarkable pamphlets—*A Full Vindication of the Measures of Congress from the Calumnies of their Enemies* (1774) and *The Farmer Refuted* (1775)—in answer to those of a "Westchester Farmer," then much read, and in them endeavored to prove that the Colonies owed allegiance directly to the British crown, were therefore not amenable to Parliament, and were justified in resorting to extreme measures to vindicate their rights. The pamphlets were at first variously attributed to such men as Jay and Livingston, and, their authorship finally becoming known, they added greatly to Hamilton's growing reputation. In 1775 he twice took a stand, as an advocate of order, against mobs bent on chastising Loyalists. Meanwhile, perceiving that an outbreak of hostilities was imminent, he had devoted himself to the study of military science, and, after serving for a time in a volunteer corps, he was appointed, on March 14, 1776, to the command of an artillery company, which soon became so conspicuous for the excellence of its drill that Nathanael Greene, under whose notice it fell, introduced Hamilton to General Washington with a recommendation for advancement. During the retreat after the battle of Long Island, Hamilton distinguished himself by the coolness and courage with which he brought up the rear. He also attracted attention by the skillful manner in which he served his battery at White Plains, participated in the retreat through New Jersey and in the battles of Trenton and Princeton, and on March 1, 1777, became an aid on the staff of General Washington, with the rank of lieutenant colonel. In this capacity he acted as Washington's confidential secretary, attending to much of the correspondence from headquarters, and in November, 1777, was sent on a delicate mission to Albany for the purpose of securing reinforcements from General Gates and General Putnam.

In December, 1780, he married Miss Elizabeth Schuyler, the daughter of Gen. Philip Schuyler, thus allying himself with one of the most influential families in New York. In February, 1781, in a fit of resentment, he left the staff of the commander in chief because the latter had rebuked him, on the ground of disrespect, for a delay in obeying orders; and, returning to the line, he successfully led one of the attacking columns at Yorktown (q.v.).

Soon after the outbreak of the war he had begun to take a lively interest in the financial and administrative problems that confronted the Confederation, and in 1780 and 1781 wrote able letters to Duane and Morris respectively, pointing out the defects in the Articles of Confederation, and the necessity of a strong central government, and proposing an elaborate scheme for the reorganization of the finances and the establishment of a bank. From May to November, 1782, he acted as receiver of continental taxes in the State of New York and was a member of the Continental Congress in 1782–83, during which time he took a conspicuous part in all debates concerning taxation and finances generally, served on various important committees, proposed an elaborate plan for a military establishment in time of peace, and became convinced, even more strongly than before, of the weakness of the existing government and the need for complete reorganization. Early in the summer of 1782, after a brief course of study, he had been admitted to the bar at Albany, and upon leaving Congress he took up with assiduity the practice of his profession in New York, meeting with immediate success. He attracted particular attention by his advocacy of the liberal treatment of Loyalists, and in the celebrated case of *Rutgers v. Waddington* braved popular opinion by attacking the "Trespass Act" of New York, which provided that a Whig dispossessed by the British could collect rent from those who had occupied his property during his absence. Besides practicing his profession, he took part in the discussion of public measures, was one of the founders of a State bank, and was active in the organization of the Society of the Cincinnati. During the most critical period of national history he vigorously aided the movement for a stronger central government. He, with Egbert Benson, represented New York in the Annapolis Convention of 1786 (q.v.), and it was he who drafted the report which led to the assembling of the Constitutional Convention at Philadelphia in the following year. Upon his return from Annapolis he was elected to the State Legislature and was there instrumental in securing the appointment of delegates from New York to the approaching convention, he himself being chosen, along with Robert Yates and John Lansing. Though his influence in the convention was to a great extent nullified by the opposition of his strongly Anti-Federalist associates, who finally withdrew altogether, as did Hamilton for a time, he exerted himself, while in attendance, to impress upon the delegates the need of a thorough reorganization of the government, and in June, 1787, made an elaborate speech in which he expressed a warm admiration of the British constitution, and proposed a plan which provided for a strong and virtually independent executive and the subordination of the individual States to the central government—the executive and Senators to hold office during good behavior, the State governors to be appointed by the central government and to have a veto on all State legislation, and the Lower House of Congress to be elected directly by the people. He vigorously supported the Constitution as finally adopted, especially by his production, with Madison and Jay, of the *Federalist* (q.v.), which exerted a powerful influence and remains the best contemporary exposition of that document; and in the New York convention achieved a remarkable triumph by securing ratification in face of an

Anti-Federalist majority at the outset of 65 to 19, making numerous speeches and finally winning over Melancthon Smith himself, who had led the debate on the opposing side.

In September, 1789, six months after the organization of the general government under the new Constitution, Congress passed an Act establishing a Treasury Department, and President Washington immediately selected Hamilton as first Secretary of the Treasury. In the then unsettled state of the country financially and economically, this was a position of primary importance, and during his term of office Hamilton rendered to the nation services scarcely less invaluable than those of Washington himself. With tireless energy and remarkable ability he applied himself to the various economic problems which then pressed so insistently for solution, and in report after report laid down policies which, adopted by Congress, reestablished the public credit, brought prestige to the national government in spite of the disintegrating tendencies of the time, and formed precedents which for the most part have since been followed and have thus in some lines determined the whole subsequent history of the nation. His reports dealt, among other things, with the public credit, the raising and collection of the revenue, estimates of income and expenditures, the temporary regulation of the currency, navigation laws, and the coasting trade, the organization of the post office, the management of the public lands, the purchase of West Point by the national government, the establishment of a mint, the founding of a national bank, the policy of the government with regard to manufactures, and the adoption of an excise; and, in addition, when, at the close of 1791, his administration was attacked as corrupt by the opposition under the lead of Madison and Giles, he sent into Congress a succession of detailed reports, setting forth the operations of his department with such comprehensiveness and lucidity as to turn abuse into praise and utterly to refute the charges of his assailants. His proposals that the national government should assume the Revolutionary debts of the individual States, that Congress should establish a national bank by virtue of the "implied powers" granted by the Constitution—the first suggestion of this doctrine—and that Congress should impose an excise—all of which had in view the strengthening of the central government—precipitated successive controversies in which those who favored Hamilton were uniformly successful, though party lines were sharply drawn, and a powerful opposition, strenuously antagonistic to centralization, was created, under the leadership of Hamilton's great rival, Thomas Jefferson (q.v.). Out of these controversies grew the Federalist and Republican (later Democratic or Democratic-Republican) parties. Hamilton also took an active interest in foreign affairs and, during the Revolutionary turmoil in Europe and the wars between France and England, uniformly advocated a policy of strict neutrality on the part of the American government; while by his attitude towards Genet (q.v.) and his well-known views concerning the excesses of the French Revolution, as well as by his freely expressed admiration of the British constitution, he gave color to the charge frequently brought against him by his opponents, that he was the leader of a strongly pro-English and anti-French faction. At the time of the Whisky Insurrection (q.v.) he advo-

cated the adoption of a vigorous repressive policy on the part of the national government and accompanied in person the troops which were sent against the insurgents. On Jan. 31, 1795, he resigned from the cabinet to resume the practice of his profession in New York City, but kept in close touch with political affairs, continued to be consulted by Washington, and maintained unimpaired his commanding influence in the Federalist party. He vigorously upheld the Jay treaty (q.v.), in support of which he wrote a series of powerful articles, under the signature "Camillus"; assisted Washington materially in the preparation of his Farewell Address; opposed the first drafts of the Alien and Sedition Acts (q.v.); and strongly combated the doctrines of the Virginia and Kentucky Resolutions (q.v.). A coolness which had appeared in the relations between Hamilton and John Adams (q.v.) as early as 1788, owing to the former having exerted his influence to prevent an equal vote being cast for Washington and Adams, gradually became pronounced and was especially marked after the election of the latter to the presidency, when Hamilton, though holding no office, exerted perhaps as much influence over the members of the cabinet as did the President himself. Hamilton, moreover, strongly disapproved of the mildness and apparent indecision of President Adams's policy towards France. (See X Y Z CORRESPONDENCE.) At Washington's request, however, he was placed in 1798 at the virtual head of the army when hostilities with France appeared imminent, and while acting in this capacity, with the rank of major general and the position of inspector general (from July 19, 1798, to June 15, 1800), he devoted himself with energy and ability to the task of organization and preparation, effecting various much-needed reforms and perfecting plans for the invasion of Louisiana and the Floridas. In the presidential election of 1800 Hamilton showed a preference for Pinckney over Adams for the presidency, and by publishing an ill-advised pamphlet sharply criticizing Adams and advocating the casting of an equal vote by the Federalists for their two candidates, he greatly weakened his party and deeply offended Adams and his immediate following. When, after the election, the famous contest for the presidency arose in Congress, he suppressed his strong dislike for Jefferson and by the use of his powerful influence was instrumental in securing the defeat of Burr. With the fall of the Federalists Hamilton's political career virtually ended. In 1804 Burr, who had at various times been balked in his political schemes by Hamilton, challenged the latter to a duel, on the ground of an alleged insult, and Hamilton, feeling that by refusing to acknowledge the accepted code, of which he strongly disapproved, he would lose his influence, and anticipating a crisis in the affairs of the nation with which he would probably be called upon to deal, consented to a meeting. The duel occurred at Weehawken, N. J., on July 11, and Hamilton fell, mortally wounded, at the first fire—having, it is said, discharged his own weapon into the air. He died the following day.

Hamilton's services to the nation can scarcely be overestimated. At a time when disintegrating tendencies were pronounced, when British rule having been overthrown, the mass of the people were restive under any restraint, and when financial and economic ruin threatened the very existence of the nation, he contended steadily for

the establishment of a strong central government, initiated various measures which were influential in bringing about such a result, and did more than any other man to put the nation on a firm financial footing, to restore the public credit, and to inculcate in the minds of the people sounder views than were then current with regard to political economy and finance. Judged by modern economic standards, some of his opinions show confusion of thought with regard to capital and wealth, but for the most part he undoubtedly saw further and clearer in his own special field than any of his contemporaries. He was not, however, like Jefferson, a great political leader, and, frankly distrusting the people, a large element of whom distrusted him in return, he never had a large personal following.

The best edition of Hamilton's *Works* is that by H. C. Lodge (9 vols., New York, 1885-86). Consult: J. C. Hamilton, *History of the Republic of the United States as Traced in the Writings of Alexander Hamilton and his Contemporaries* (7 vols., New York, 1857-64; 4th ed., 7 vols., Boston, 1879); J. C. Hamilton, *Life of Alexander Hamilton* (2 vols., New York, 1834-40), unfinished; Morse, *Life of Alexander Hamilton* (2 vols., Boston, 1876); Shea, *Life and Epoch of Alexander Hamilton* (New York, 1879); Lodge, *Alexander Hamilton* (Boston, 1882), in the "American Statesmen Series"; Sumner, *Alexander Hamilton* (New York, 1890), in the "Makers of America Series"; and a brief sketch by Conant, *Alexander Hamilton* (Boston, 1901), in the "Riverside Biographical Series." A vivid account of Hamilton is contained in Mrs. Gertrude Atherton's historical romance, *The Conqueror* (New York, 1902). Oliver's *Alexander Hamilton: An Essay on American Union* (London, 1906) is a brilliant work, though strongly anti-Jefferson. Consult also: J. H. Choate, *Abraham Lincoln and Other Addresses* (New York, 1910); A. M. Hamilton, *The Intimate Life of Alexander Hamilton* (ib., 1910); F. T. Fox, *A Study in Alexander Hamilton* (ib., 1911); S. W. Culbertson, *Alexander Hamilton* (New Haven, 1911). A list of books concerning Hamilton, and of Hamilton's writings, is given in Ford, *Bibliotheca Hamiltonia* (New York, 1886).

HAMILTON, ANDREW (?-1703). A Colonial Governor of New Jersey. He was of Scottish birth, and before emigrating to East Jersey had been a merchant in Edinburgh. In 1686 he was appointed a member of Governor Lord Neill Campbell's council, and a year and a half later, Dec. 10, 1687, on the latter's return to Europe, was appointed his substitute. While on a visit to London in 1692 he was regularly commissioned Governor of East Jersey and soon afterward received the appointment to the same office in West Jersey. In 1697 the proprietors deposed him because of his Scottish birth, in accordance with an act of Parliament passed shortly after Sir George Barclay's attempt to assassinate King William; but in 1699 he was reappointed. In 1701 William Penn appointed him Deputy Governor of Pennsylvania. He was for some time Postmaster-General in America, and either he or his son, Col. John Hamilton, established the first Colonial postal service under a patent dated 1694.

HAMILTON, ANDREW (c.1676-1741). An American lawyer, born in Scotland. Of his early history nothing is known, nor is it certain

that Hamilton was his real name, as he was for some time called Trent. About 1697 he came to Virginia and afterward removed to Philadelphia, where he was made Attorney-General (1717) and a member of the Provincial Council (1721). He was prothonotary of the Supreme Court and recorder of Philadelphia, a member of Assembly (1727) and its Speaker in 1729. He and his son-in-law built as a private property the State House, which later became Independence Hall. Hamilton is best known for his defense (1735) of John Peter Zenger (q.v.) on the charge of libel. He advanced as defense the truth of the publication and gained a verdict of "not guilty," which did much for the freedom of political discussion, so that Gouverneur Morris styled him "the dog star of the American Revolution." He was trustee of the General Loan Office and (1737) judge of the Vice-Admiralty Court of the Province of Pennsylvania.

HAMILTON, ANTHONY (1646-1720). An English courtier and French author of fables and of the scandalous *Mémoires du Chevalier de Gramont*, otherwise known as the *Histoire amoureuse de la cour d'Angleterre* (1713). He was born at Roscrea, Ireland, the third son of Sir George Hamilton, a son of the first Earl of Abercorn, and was brought up in France and as a Roman Catholic. This prevented his promotion by Charles II, at whose court he was very popular, but furthered it under James II, who made him colonel of an Irish regiment and Governor of Limerick. After the fall of James he went back to France, where he found a patroness in the Duchess Ludovise of Maine. At her country seat at Seceaux he wrote the famous *Mémoires*. His last public enterprise was a share in the fiasco of the Old Pretender in 1708. Hamilton's *Contes de féerie* aimed at once to rival and to ridicule the *Arabian Nights* of Galland (q.v.). They err through artificiality and the intrusion of personal and local allusions. The *Mémoires de Gramont*, on the other hand, will always remain one of the most remarkable pictures that we possess of the noble younger son, the cadet of the *grand siècle*—light yet hard-hearted, keenly witty, profoundly skeptical, chivalrously brave when in view, capable of dastardly meanness behind the scenes. They give interesting side lights on Mazarin, Cromwell, Charles II, and Louis XIV, as well as on the customs of both France and England. The *Mémoires* were printed in English in 1714. There is an illustrated translation with notes by Walter Scott (1811), and many editions in both languages. The *Fables* were first printed in 1730, and Hamilton's *Works* in six volumes in 1749. Editions after 1812 are more complete. Consult Sainte-Beuve, *Causeries du lundi*, vol. i (Paris, 1857-62).

HAMILTON, CLAYTON (MEEKER) (1881-). An American dramatic critic. Born in Brooklyn, N. Y., he graduated from the Polytechnic Institute of Brooklyn in 1900 and from Columbia University (M.A.) in 1901. He was extension lecturer on the drama at Columbia after 1903, and lectured also in other connections. He served as dramatic critic and associate editor of the *Forum* in 1907-09, and as dramatic editor of the *Bookman* after 1910, of *Everybody's Magazine* after 1911, and of *Vogue* after 1912. He was elected a member of the National Institute of Arts and Letters. He edited Stevenson's *Treasure Island* for "Long-

man's English Classics" in 1910; contributed to the *NEW INTERNATIONAL ENCYCLOPEDIA*; and is author of *The Love That Blinds* (1906) with Grace Isabel Colbron; *Materials and Methods of Fiction* (1908); *The Theory of the Theatre* (1910); *The Stranger at the Inn* (1913); *Studies in Stagecraft* (1914); and, with A. E. Thomas, a play, *The Big Idea* (1914).

HAMILTON, ELIZABETH (1758-1816). An author, of Scottish parentage, born in Belfast. She was educated by relatives in Stirlingshire and began to write at an early age. *Hindoo Rajah* (1796), containing Eastern impressions of England; *Memoirs of Modern Philosophers* (1800); *Letters on Education* (1801-02); *Memoirs of Agrippina, the Wife of Germanicus* (3 vols., 1804); *Letters on the Formation of the Religious and the Moral Principle to the Daughter of a Nobleman* (1806), are her more serious works; but she is best known by her Scottish tale, *The Cottagers of Glenburnie* (1808), and the ballad "My ain Fireside." She was unmarried, but called herself Mrs. Hamilton and was personally revered as a philanthropist.

HAMILTON, EMMA, LADY (?1761-1815). Mistress of Horatio Nelson (q.v.), the famous English admiral. She was a daughter of Henry Lyon, a man in very humble circumstances. Her career was for a long time an obscure one, and she gave birth to several illegitimate children. In 1784 she fell in with Sir William Hamilton, Ambassador at Naples, and he was captivated by her great beauty. She became his mistress, but he married her on Sept. 6, 1791. At Naples she played a great social and political rôle, being an intimate of Queen Maria Carolina. Nelson first met Lady Hamilton at Naples in 1793, again in 1798, and from 1800 onward they lived together. In 1801 Lady Hamilton gave birth to a child, Horatia, by Nelson. After Nelson's death Lady Hamilton's affairs became involved, and in 1813 she was even arrested for debt. She died at Calais, on Jan. 15, 1815. Her child by Nelson lived with the latter's sisters. She died March 6, 1881. Another child by Nelson died in infancy. Consult Sichel, *Emma, Lady Hamilton* (London, 1905), and Moorhouse, *Nelson's Lady Hamilton* (ib., 1906).

HAMILTON, FRANK HASTINGS (1813-86). An American surgeon, born at Wilmington, Vt. He graduated at Union College in 1830 and received the degree of M.D. at the University of Pennsylvania in 1835. After teaching in various colleges, he became in 1861 professor in the Bellevue Hospital Medical College. He was a military surgeon for two years in the Civil War and was appointed medical inspector with the rank of lieutenant colonel in 1863. Among the many positions of honor and trust which he held was the presidency of the New York Society of Medical Jurisprudence. He served as consulting surgeon to various hospitals and asylums and became widely known as an authority on surgery, his three large works having a recognized place in the literature of medical science. They are: *Treatise on Fractures and Dislocations* (1860; 5th ed., 1880); *Practical Treatise on Military Surgery* (1861); *The Principles and Practice of Surgery* (1872).

HAMILTON, FRANKLIN ELMER ELLSWORTH (1866-1918). An American Methodist Episcopal clergyman and educator, brother of John W. Hamilton. He was born at Pleasant Valley, Ohio; graduated from Harvard College in 1887, and, after being professor of Latin and Greek in

Chattanooga University (1887-88), from the Boston University School of Theology in 1892; and studied at Berlin and Paris for nearly three years. He entered the ministry in 1892, joining the New England conference. In 1905-06 he made a trip around the world for the purpose of studying missions. He was a member of the general conferences of 1908 and 1912 and of the ecumenical Methodist conference of 1911. In 1908 he became chancellor of the American University, at Washington, D. C., succeeding Bishop C. C. McCabe. He was president of the Epworth League of New England in 1902-04 and vice president of the Epworth League of the world from 1908 to 1912. He is the author of *The Cup of Fire* (1914).

HAMILTON, GAIL. The pseudonym of Mary Abigail Dodge (q.v.).

HAMILTON, GAVIN (1730-97). A Scottish painter and antiquary. He was born at Lanark, of an ancient Scottish family. At an early age he was sent to Rome, where most of his life was spent. He studied painting under Massucci and painted chiefly classical subjects. His favorite themes were chosen from the *Iliad*—"Achilles beside the Dead Body of Patroclus," "Hector and Andromache," and "Helen and Paris." Hamilton, however, rendered greater service to art by his discoveries of precious fragments of ancient monuments than by his direct contributions to it. The latter part of his life was devoted to excavations in various parts of the Roman states, but especially on the Via Appia, at Prima Porta, Monte Cagnuolo, Castel di Guido, Gabii, and above all at Hadrian's villa at Tivoli. The statues, busts, and bas-reliefs found by him form the most interesting portion of the Museo Pio-Clementino in the Vatican, after the treasures of the Belvedere. Many collections in England, Germany, and Russia are deeply indebted to his labors. To one of the best of these—the Townley collection (British Museum)—Hamilton contributed a large number of valuable marbles. The Gabii marbles are in the Louvre. As a dealer in the antiquities which he discovered, he was liberal and honest. In 1773 he published at Rome *Schola Italica Pictura*, illustrated after his own drawings of the great Italian masters.

HAMILTON, GEORGE FRANCIS, LORD (1845-). An English administrator, born at Brighton, the third son of the first Duke of Abercorn. He was educated at Harrow, entered the Rifle Brigade as ensign in 1864, and in 1868 was transferred to the Coldstream Guards, with a lieutenant's commission. In 1868 he entered Parliament as a Conservative for Middlesex, which he represented till 1885. After 1885 he sat for the Ealing division. In 1874-78 he was Undersecretary of State for India. With the return to power of the Conservative party in 1885 he became First Lord of the Admiralty, an office which he occupied until 1892. In 1895 he became Secretary of State for India under Lord Salisbury and retained office under Balfour till 1903, when he resigned owing to his opposition to Mr. Chamberlain's tariff reform proposals. His ability in dealing with Indian affairs was marked. He was chairman of the London School Board in 1894-95, chairman of the Poor-Law Commission in 1905-09, and after 1899 was captain of Deal Castle.

HAMILTON, SIR IAN STANDISH MONTEITH (1853-). A British army officer, born in Corfu, the son of a colonel, of the Silvertonhill

branch of the family. He was educated at Cheam and Wellington, and entering the army in 1873, he served with distinction in the Afghan War in 1878-80 and in the Boer War of 1881. In the Nile expedition (1884-85) he received the Khedive's Star, and, as in the Burmese expedition of 1886-87, a medal. He became colonel (1891) and major general during the Boer War (1899-1901), where he fought before Ladysmith, and in 1901 was appointed chief of staff to Kitchener. In 1903-04 he was quartermaster-general. During the Russo-Japanese War he accompanied the Japanese forces in Manchuria as military representative of India. He held the southern command in 1905-09, and (after being adjutant general to the forces and second military member of the army council) in 1910 took the command of the Mediterranean, which Kitchener had refused. He wrote prose and verse with some facility and published in 1905 *A Staff Officer's Scrap-Book during the Russo-Japanese War* (abridged ed., 1913).

HAMILTON, JAMES, first DUKE OF (1606-49). A Scottish nobleman. After the descendants of James VI he was heir to the Scottish throne. He was educated at Exeter College, Cambridge. In 1631 he aided Gustavus Adolphus in Germany with 6000 men, but after heavy losses from disease and famine he returned in 1634 and became an adviser to Charles I. Appointed in 1638 a commissioner to pacify the Scottish covenanters, who had revolted against the new English Prayer Book, he informed the King that his countrymen "were possessed by the devil," and his expedition was futile. He became involved in numerous political intrigues, on one side and then another. In 1641 an attempt was made to seize Argyll, Hamilton, and the Earl of Lanark; but they escaped. He was with the King in 1642 when the effort was made to arrest the five members of Parliament. Charles, who had zealously befriended Hamilton, became dissatisfied with him at last and had him imprisoned (1644) in Pendennis Castle and afterward at St. Michael's Mount, from which he was released by Fairfax's troops in 1646. Two years later, after the seizure of the King, Hamilton raised an army of 24,000 Scots, but he was held in check and later easily defeated in detail at Preston by Cromwell with only 9000 men. Taken prisoner, Hamilton was tried in February, 1649, condemned to death, and executed. Consult G. Burnet, *Memoirs of James and William, Dukes of Hamilton* (London, 1677).

HAMILTON, JAMES (c.1710-83). A Colonial Governor of Pennsylvania, son of Andrew Hamilton (q.v.) the lawyer, and born probably in Accomac County, Va. He was prothonotary of the Supreme Court of Pennsylvania after his father's resignation, was six times a member of the Provincial Assembly, was elected mayor of Philadelphia (1745), and a member of the Provincial Council (1746). Two years later he became Lieutenant Governor, which office he resigned in 1754. He took a prominent part in the defense of the Colonies against the Indians in 1755 and was Deputy Governor (1759-63, 1771, and 1773). While the British held Philadelphia, he was a prisoner on parole. He was active in educational and scientific circles after the war, serving as president of the board of trustees of Philadelphia College and head of the Philosophical Society.

HAMILTON, JAMES (1769-1829). A British teacher of languages. Hamilton went to school

for four years only, to two Jesuits in Dublin. As a business man, he lived in France and Hamburg, where he learned German from an émigré, D'Angeli, who used no grammar, but taught by literal translation. On the rupture of the Peace of Amiens, Hamilton was "detained" in France, and his continental business was ruined. In 1815 he came to New York, intending to manufacture potash. Instead, he became a teacher of languages, combining the methods of his Jesuit teachers and of D'Angeli. This analytic method met with almost incredible success in New York City and in Philadelphia, where he published English interlinear translations of works in Greek, Latin, French, Italian, and German. Opposition to his methods in Baltimore College roused him to a defense which resulted in the total desertion by the students of the college to the Hamiltonian Institute, which he had founded in Baltimore. After teaching in many college towns of the United States and in Canada, he went to London (1823). Throughout England and Scotland he was again marvelously successful. Hamilton's great work was *History, Principles, Practice, and Results of the Hamiltonian System* (last ed., 1831).

HAMILTON, JAMES (1786-1857). An American politician, born in Charleston, S. C. He received a good education in his native city, studied law, and soon attained a high position at the South Carolina bar. In 1812 he was appointed a captain in the army and served in the campaigns on the Canadian frontier. He was mayor of Charleston for several terms, and in 1822, while serving in that capacity, he detected, and by his measures suppressed, a well-planned negro conspiracy. After serving in the State Legislature, he was in 1822 elected a member of Congress as a States Rights Democrat, to fill a vacancy, and was twice reelected, serving until 1829. He was an ardent supporter of Andrew Jackson, both in 1824 and 1828, and after Jackson's election in the latter year he was offered the position of Secretary of War or of Minister to Mexico, both of which he declined. Returning to South Carolina, he was in 1830 elected Governor of the State on an extreme States Rights platform, and immediately recommended to the Legislature that it authorize armed resistance to the enforcement of the provisions of the tariff of 1828. He advised the passage of the Nullification Act, which brought affairs to a crisis, and in 1832 was appointed by Gov. Robert Y. Hayne, who in that year succeeded him in the governorship, to the chief command of the State troops recruited to resist the national government. He never acquiesced in the settlement of the trouble and soon thereafter removed to Texas, where he became interested in some colonization schemes. In 1841 he was the accredited representative of Texas in Europe, where he was active in securing the recognition of the independence of the Republic by England and France in that year. He next bent all his energies to securing the admission of Texas into the Union. In 1857 he was elected United States Senator from Texas, but was drowned in a steamship collision off the Texas coast before he took his seat.

HAMILTON, JAMES (1814-67). A Presbyterian divine. He was born in Paisley, Scotland, Nov. 27, 1814, educated at Glasgow and Edinburgh, entered the ministry, and from 1841 till his death, Nov. 24, 1867, was minister of the National Scotch Church, Regent Square, Lon-

don. His literary activity was very great, as aside from editorial labor he produced numerous volumes of devotion and biography. His *Collected Works* were published in six volumes (London, 1869-73). His life, by Arnot, is in the *Scottish Ecclesiastical Biographies* (Edinburgh, 1870).

HAMILTON, JAMES CLELAND (1836-1907). A Canadian barrister and author. He was born at Belfast, Ireland, but in his youth came to the United States, was educated at Hanover College and Rutgers College, and afterward took a law course in Toronto University. He was called to the Canadian bar in 1861. In addition to his professional duties he devoted considerable time to literary and scientific investigation. His more important work is contained in the papers upon literary and scientific subjects written for the Canadian Institute, of which he was elected vice president, and printed in its *Proceedings*—such as *The Great Centre, an Astronomical Study* and *The Paris, an Historical Outline of Canadian Indian Slavery in the Eighteenth Century*. He published also *The Prairie Province: Sketches of Travel from Lake Ontario to Lake Winnipeg* (1876) and *The Georgian Bay* (1893).

HAMILTON, JOHN ANGUS LUSHINGTON MOORE (1874-1913). A British newspaper correspondent, born in London. He studied at Cheltenham College and in Germany and France. He served as a special correspondent in the United States (1894), in Australasia (1896), and in Central Asia (1905-06); and he was war correspondent at the siege of Mafeking (1899-1900), in the Boxer uprising (1900-02), in the Balkans (1903), in the Russo-Japanese War (1904-05), in the Assam operations (1911-12), and in the Balkan War (1913). While serving as correspondent with the Turkish army, he was twice captured by the allies. He attempted to give a lecture tour in the United States in 1913, but, his efforts resulting in failure, he committed suicide. He published: *Siege of Mafeking* (1900); *Korca* (1904); *Afghanistan* (1906); *Problems of the Middle East* (1908); *Somaland* (1910); *In Abor Jungles* (1912).

HAMILTON, JOHN McLURE (1853-). An American portrait painter, born in Philadelphia. He studied first at the Pennsylvania Academy of Fine Arts, then at the Royal Academy of Antwerp, and at the Ecole des Beaux-Arts, Paris. After 1878 he made his home in London, where he established a reputation by his portraits of many noted Englishmen. There is nothing essentially English about his style, which unites French accuracy of line with the warm shadows of the Antwerp school, giving the effect of solid modeling. His portraits are small in size and depict the sitter in familiar surroundings with the intimacy of actual life. He was awarded gold medals at the Pan-American Exposition (Buffalo, 1901) and the St. Louis Exposition (1904). His works in public galleries include "Gladstone at Downing Street," "The Honorable Richard Vaux," and "Cardinal Manning," in the Pennsylvania Academy; "Gladstone," in the Luxembourg; and "Professor Tyndall," in the National Portrait Gallery, London.

HAMILTON, JOHN WILLIAM (1845-). An American Methodist Episcopal bishop, brother of Franklin E. E. Hamilton. He was born at Weston, Va., and graduated from Mount Union College in 1865 and from the Boston School of Theology in 1871, having entered the

ministry in 1866. From 1892 to 1900 he was secretary of the Freedmen's Aid and Southern Education Society and at the same time editor of the *Christian Educator*. In 1900 he was elected Bishop, and is now resident in Boston. He was a member of five general conferences and a member of each of the last three ecumenical Methodist conferences. In 1898 he was selected as the fraternal delegate to the Wesleyan conferences of England and Ireland. He is the author of *Jesse Lee and the Old Elm* (1875); *The People's Pulpit* (1884); *American Fraternal Greetings* (1898).

HAMILTON, MOUNT. See LICK OBSERVATORY.

HAMILTON, PATRICK (c.1504-28). A precursor of the Scottish Reformation. He was born probably in the year 1504, either at Stanc-house or Kincavel. He was educated at the University of Paris, where he took his degree of A.M. in 1520, after which he probably proceeded to Louvain and Basel. In 1523 he was back in Scotland and was admitted to St. Andrews University. While abroad, he had formed new tastes and interests, but for some time his opinions attracted no attention. Gradually, however, his convictions matured. From agreeing with Erasmus he came to agree with Luther, and about 1526 he appears to have announced his new views in such a manner as to draw the notice of Archbishop Beaton. Early in 1527 Beaton made "inquisition" into the grounds of the rumor against him, and Hamilton fled to Wittenberg, where he became familiar with Luther and Melancthon, and then passed on to Marburg, where the university was just opened. After six months he returned to his native country, in the autumn of 1527. He repaired to the family mansion at Kincavel and there preached openly. In some way he was induced to go to St. Andrews in January, 1528, and took up his abode in a lodging provided for him by the Archbishop. A conference was held, in which his opponents showed a conciliatory spirit and even to some extent expressed concurrence in his views. He was allowed to depart in peace and for some time to promulgate his sentiments in the city and University of St. Andrews. After a month or so he was summoned to answer before Beaton to a charge of heresy. He was condemned for divers heresies, deprived of all dignities and benefices in the Church, and delivered over to the secular power to be punished. The sentence was carried out without delay. On the very same day on which he was tried (Feb. 29, 1528), he was burned at the stake in the front of the gate of St. Salvador's College. His only publication is known as *Patrick's Places*, and is an evangelical treatise, written in Latin; it was translated by Frith (London, 1807). For his life, consult Lorimer (ib., 1857).

HAMILTON, ROBERT (1743-1829). A Scottish writer on finance, born in Edinburgh, educated at the University of Edinburgh. He entered a banking house, but at the age of 26 left mercantile pursuits and became successively rector of Perth Academy, professor of natural philosophy in Aberdeen University (1779), and professor of mathematics (1817). In 1777 he wrote an *Introduction to Merchandize*; in 1790, three essays on *Peace and War*; in 1822, *Management of the Poor*, a work displaying enlightened views on economics. His most important work is the *Essay on the National Debt*, which appeared in 1813. A posthumous volume published in 1830,

The Progress of Society, is also of great ability, treating of economical principles by tracing their natural origin and position in the development of social life.

HAMILTON, SCHUYLER (1822-1903). An American soldier, a grandson of Alexander Hamilton. He was born in New York, graduated at West Point in 1841, served with great gallantry in the Mexican War, and was brevetted first lieutenant in 1846 and captain in 1847. From the latter year until 1854 he was aid-de-camp to Gen. Winfield Scott. He then resigned from the army, but upon the outbreak of the Civil War volunteered as a private in the Seventh Regiment, New York National Guard. He was rapidly promoted, becoming a brigadier general of volunteers in 1861, and a major general of volunteers in 1862. He was actively engaged in the operations against New Madrid, Mo., and Island No. 10, in the Mississippi River, and in the campaigns in Tennessee and Mississippi. Sickness compelled him to resign in 1863. He was hydrographic engineer in the Department of Docks, New York City, in 1871-73, and superintendent of yards in 1873-75, and subsequently, owing to ill health, lived in retirement. He wrote *A History of our National Flag* (1852).

HAMILTON, THOMAS (1789-1842). An English prose writer, of Scottish descent, born in Glasgow. He was educated at Glasgow University and became the friend of Wordsworth and Scott. His novel *Cyril Thornton* (1827) was popular in its day, while in *Men and Manners in America* (1833) he showed himself a kindly critic, shrewd and humorous.

HAMILTON, WALTER (1844-99). An English writer, born in London, and educated at the Collège de Dieppe. He was a fellow of the Royal Historical Society, vice president of the Société Française des Collectionneurs d'Ex Libris, and vice president of the Ex Libris Society. His published works include: *A Memoir of George Cruikshank* (1878); *The Origin of the Office of Poet Laureate* (1879); *The Poet Laureates of England* (1879); *The Esthetic Movement in England* (1882); *Parodies of the Works of English and American Authors, Collected and Annotated* (5 vols., 1884-88); *French Book Plates for Ex Libris Collectors* (1892); *Dated Book Plates* (2 parts, 1894-95).

HAMILTON, WILLIAM (1704-54). A Scottish poet, born at Bangour, Linlithgowshire. Between 1724 and 1727 he contributed lyrics to Allan Ramsay's *Tea Table Miscellany*. In 1745 he joined the cause of Prince Charles and celebrated the battle of Prestonpans in an ode beginning "As over Gladsmuir's blood-stained field." After the disaster of Culloden he lurked for several months in the Highlands and at length escaped to France; but the influence of his friends at home procured him permission to return to Scotland. Broken in health, he went back to France, where he died. Though Hamilton wrote much graceful verse, his fame rests upon what Wordsworth called "the exquisite bal-lad," "The Braes of Yarrow."

HAMILTON, SIR WILLIAM (1730-1803). Grandson of William Douglas, third Duke of Hamilton, born in Scotland. From 1764 to 1800 he was English Envoy Extraordinary and Plenipotentiary to the court of Naples. During his residence there he devoted much time to a study of Vesuvius, ¹Ætna, and other volcanoes, and embodied his results in *Campi Phlegreæ*

(2 vols., and suppl., Naples, 1776-79) and shorter papers. He called attention also to the earlier excavations and discoveries at Pompeii. He was also an enthusiastic collector, particularly of ancient vases, which he seems to have been one of the first Englishmen to appreciate for their artistic merit. His first collection was sold in 1772 to the British Museum for £8400 and formed the nucleus of the present department of Greek and Roman antiquities. This collection was described by D'Hancarville, in *Antiquités étrusques, grecques et romaines* (4 vols., Naples, 1766-67; 2d ed., Florence, 1801-08). In 1787 he resumed collecting and in 1798 sent a second collection to England for sale; but the vessel was wrecked, and only about two-thirds of the cases were recovered. The whole collection was drawn by Tischbein in his *Collection of Engravings from Greek Vases . . . in the Possession of Sir W. Hamilton* (Naples, 1791 et seq.). From 1793 to 1800 Hamilton took an active part in the diplomacy of the court of Naples; but his health failed, and in 1800 he was recalled. A claim upon the British government for special services was not allowed, but he was granted a pension of £1200. Hamilton's first wife was Miss Barlow, who died in 1782. In 1791 he married his mistress, Emma Lyon, who as Lady Hamilton is prominent in the life of Lord Nelson. See Michaelis, *Die archäologischen Entdeckungen des neunzehnten Jahrhunderts* (Leipzig, 1906).

HAMILTON, SIR WILLIAM (1788-1856). An eminent philosopher of the Scottish school. He was born March 8, 1788, at Glasgow, where his father, Dr. William Hamilton, and his grandfather, Dr. Thomas Hamilton, held in succession the chairs of anatomy and botany. After gaining distinction, especially in the philosophical classes, at Glasgow, he went in 1807 to Balliol College, Oxford, as a Snell exhibitioner, and made a brilliant record for himself as a student of literature. He left Oxford in 1811, and instead of going into the practice of medicine, which he had studied, he became a member of the Scottish bar in 1813, but seems never to have had any practice in his profession except what became incumbent on him afterward, on being appointed crown solicitor of the Court of Teinds. In 1820, on the death of Dr. Brown, he was an unsuccessful competitor for the chair of moral philosophy in Edinburgh. In the following year, however, Hamilton was appointed to the professorship of history in that university. He took part in 1827 in the discussion of the scientific value of phrenology, and made investigations for himself of the brains of various animals in order to become acquainted at first hand with the facts of the case. In 1829 there appeared in the *Edinburgh Review* a critique of Cousin's *Cours de Philosophie* of the previous year, in which was developed Hamilton's famous doctrine of the infinite. The critique, which was entitled "The Philosophy of the Unconditioned," immediately drew attention to him from philosophers both in Great Britain and on the Continent. For some years after this Hamilton was a regular contributor to the *Edinburgh Review*, writing articles on philosophy, literature, medicine, education, and university reform. Many of these contributions were translated into German, French, and Italian. In 1852 they were all edited by Hamilton himself, with large notes and appendices, under the title of *Discussions in Philosophy and Literature, Education, and Uni-*

versity Reform. In 1836, after a severe contest, Hamilton was elected to the chair of logic and metaphysics in Edinburgh. In 1846 he published in two volumes *The Works of Thomas Reid*, carefully edited with notes and supplementary descriptions, which give satisfactory views of his own philosophy, but are not always fair to Reid. In 1844 he had a stroke of paralysis. He was, however, able, with an assistant, to perform the duties of his class till the close of session 1855-56, when his health suddenly became worse. He died May 6. In logic Hamilton proposed the so-called doctrine of "the quantification of the predicate" in affirmative propositions. In this contention Hamilton may properly be regarded as the forerunner of the algebraic school of logicians. (See LOGIC.) In philosophy he was an exponent of the common-sense Scottish school, but in some respects he went beyond the tradition of the school. Agreeing with Reid that "the root of our nature cannot be a lie," and that "the deliverance of consciousness" must be trusted, he accepted a naïve sort of natural realism, maintaining that we are directly conscious of the existence of external objects in contact with our bodies and of ourselves. And yet knowledge is said to be relative. "To think is to condition." In this doctrine of the relativity of knowledge consists his departure from Scottish traditions, and it led him to maintain in the spirit of Kant that the unconditioned cannot be known. God is an object of faith, not of knowledge.

Philosophy, according to Hamilton, cannot say whether God is absolutely limited or absolutely unlimited. One or the other He must be, for between contradictions there is no compromise; but either characteristic is inconceivable. Again, our conception of causality is nothing positive. It is nothing but the *inability* of the mind to conceive an absolute beginning. So the infinity of space and time is the inability of the mind to conceive a point where space comes to an end or a moment after which time shall be no more. But this inability to think is no test of unreality. Thus, philosophy is only a learned ignorance (*docta ignorantia*), or a well-assured conviction of the limits of our knowledge. His philosophy of relativity was developed by Mansel (q.v.), and in the hands of Herbert Spencer, who gave up "common sense," it changed into agnosticism. Consult: Veitch, *Memoir of Sir William Hamilton* (London, 1869); id., *Hamilton*, in Blackwood's "Philosophical Classics" (Edinburgh, 1879), and *Hamilton, the Man and his Philosophy* (ib., 1883); J. S. Mill, *Examination of Sir William Hamilton's Philosophy* (London, 1878); Martineau, *Reviews and Addresses*, vol. iii (ib., 1891); A. Seth, *Scottish Philosophy* (Edinburgh, 1890); Stirling, *Sir William Hamilton* (London, 1865); Monck, *Sir William Hamilton* (New York, 1881); Seth, *English Philosophies and Schools of Philosophy* (London, 1912). His principal writings are accessible in the four volumes of lectures edited by Mansel and Veitch, reprinted in two volumes (Boston, 1859-60). A college edition of his writings was published in 1855, by O. W. Wight; and an abridgment of his philosophy appeared as *Metaphysics*, under the editorship of Bowen (Cambridge, Mass., 1870).

HAMILTON, WILLIAM GERARD (1729-96). An English statesman. Of Scottish family, but born in London, he passed through Winchester College to Oriel, Oxford, though he did not

graduate. He entered as a student at Lincoln's Inn (1744), but left the law for political life, and was a member of Parliament for both English and Irish boroughs. "Single Speech Hamilton" was a misnomer, since Horace Walpole remarked upon the brilliance of his oratory on more than one occasion. Boswell mentions that he also charmed Dr. Johnson by his personality and conversation. He went to Ireland in 1761, as Chief Secretary to the Lord Lieutenant, having Edmund Burke as his own secretary. He was appointed Chancellor of the Irish Exchequer in 1763; and in 1782 he was offered a place in the English cabinet as Secretary for War, but declined. He was so notable a figure in his time that the *Letters of Junius* were ascribed to him, but he was more of a politician than a statesman. He died in London, July 6, 1796. His published writings were collected by Malone under the title of *Parliamentary Logick* (1808).

HAMILTON, SIR WILLIAM ROWAN (1805-65). A Scottish-Irish mathematician, born at Dublin. His father, a solicitor, went to Dublin as a boy. William was remarkable as a child, having a good knowledge of Hebrew at the age of seven, and at 12 having studied not only Latin, Greek, and the leading modern languages of Europe, but also Syriac, Persian, Arabic, Sanskrit, Hindustani, and Malay. This devotion to languages was encouraged by his father because of the opportunities for service in the East India Company. During this same period his mathematical powers began to be manifest, and in his tenth year he entered a contest with the young American calculator (see CALCULATORS, REMARKABLE), Zerah Colburn, who was then visiting Dublin, and, although defeated, made a creditable record. Before he went to Trinity College, Dublin (1823), in his eighteenth year, he had not only mastered Euclid, Newton's *Arithmetica Universalis* and the *Principia*, and Laplace's *Mécanique céleste*, but had discovered an important error in the last-named work and had written an original memoir on osculation of certain curves of double curvature. His career at Trinity was one of remarkable brilliancy. While only a second-year student he read before the Royal Irish Academy a "Memoir on Caustics," which attracted wide attention and led Airy to assert that "it had made a new science of optics." While still an undergraduate (1827), Hamilton was appointed Andrews professor of astronomy and superintendent of the observatory, and soon after became Astronomer Royal for Ireland. He was twice honored with the gold medal of the Royal Society—first for his work on optics, and again for his contributions to dynamics. He was knighted in 1835 and was subsequently made president of the Royal Irish Academy and corresponding member of the Academy of St. Petersburg and of the Académie des Sciences of Paris.

Hamilton is chiefly known for his discovery of quaternions (q.v.). He announced the theory in 1844 and in 1848 began to lecture upon it at Trinity. His *Lectures on Quaternions* (1853) and *Elements of Quaternions* (posthumous, 1866; 2d ed., 1899) were not, however, written in a style to appeal to a large circle of mathematical readers, and it is owing chiefly to the work of Professors Tait and Kelland that the theory has attracted the attention that it merits. Consult Graves, *Life of Sir William Rowan Hamilton* (Dublin, 1882-89).

HAMILTON COLLEGE. An institution of

higher education, situated at Clinton, N. Y. It was founded in 1793 by the Rev. Samuel Kirkland, a Congregational missionary among the Oneida Indians, for the education of the white and Indian population. The erection of a building, of which the corner stone was laid by General Steuben in 1794, was brought to a standstill for lack of funds, and was only completed in 1799 through the untiring efforts of the founder. In that year the school was formally opened, and until 1812 was known as Hamilton Oneida Academy, deriving its name from Alexander Hamilton, one of its benefactors and trustees. In 1812, the necessary \$50,000 having been collected, the institution was chartered by the University of the State of New York as Hamilton College. It grew steadily for a while, but during President Davis's administration differences arose between him and the trustees, and the college suffered in consequence. Under President North's administration, however, the institution developed into one of the best-known classical colleges in the United States and has since maintained a national reputation, especially in the departments of rhetoric and oratory. It has made no effort to give "university" or specialized training, but has consistently upheld high scholastic standards. The two courses are the classical and the Latin-scientific, both offering numerous electives. The A.B. degree is not given without Greek. Two prizes are available. The attendance in 1914 was 200, and the faculty numbered 20. At the same time the endowment was \$1,100,000, the gross income \$70,000, and the value of real estate and collections was estimated at \$500,000. The library contains 62,000 volumes. The campus, covering 95 acres, is notable as representing the graduates and college classes in buildings, grounds, and other college improvements. The presidents have been: Azel Backus (1812-16); Henry Davis (1817-33); Sereno Edwards Dwight (1833-35); Joseph Penney (1835-39); Simeon North (1839-57); Samuel Ware Fisher (1858-66); Samuel Gilman Brown (1866-81); Henry Darling (1881-91); Melancthon Stryker (1892-). Consult C. E. Allison, *Historical Sketch of Hamilton College* (Yonkers, N. Y., 1889).

HAMILTON INLET. An indentation of the Labrador coast, North America, 150 miles long, with a maximum breadth of 30 miles (Map: Canada, T 6). It forms the estuary of the Grand, or Hamilton, River (q.v.). From the north it receives the waters of Grand Lake. Melville Lake is a name applied to the inner waters of the estuary.

HAMILTON RIVER. See **GRAND RIVER.**

HAMILTON SERIES. See **DEVONIAN SYSTEM.**

HAMITES, or HAMITIC. Designations applied to peoples and languages of the white or Caucasian branch of mankind settled from remotest times in northern and northeastern Africa and the Canary Islands. Both in biological character and in speech, as well as in situation and activities, they are nearest to the Semites. The Hamites are in touch with African tribes south of the Sahara, and mixture with negroes has influenced the type of the population during thousands of years. On the other hand, Hamite culture has extended far from its original province. Much confusion has been created by adopting at the same time a somatological and linguistic basis of classification. The following popular scheme for the eastern Hamites suffers from this difficulty:

1. The ancient Egyptians, the oldest-known people of the white race to develop a high civilization. Their descendants are the Copts, or native Christians, interspersed among the population, and the Fellahin, or peasant class, speaking a Semitic language and practicing a Semitic religion.

2. Farther up the Nile the Nubians, strongly negroid, are mixed with Hamite Bejas.

3. The aboriginal population on the Abyssinian plateau: Agau Hamites.

4. Ethiopian, or Kuschitic, Hamites: Somalis, in many tribes; Gallas, one branch of whom, including Shoas and Amharas, extends into Abyssinia; Danakils in Afarland.

5. Masai, in British East Africa, south of the equator and east of the Victoria Nyanza. They are Hamites in language, have dark skin and frizzled hair, and are physically among the most magnificent races.

6. Wahuma, or Watusi, the ruling race in northwestern German Africa, almost identical in speech and biological character with the Gallas. Passing westward from the Egyptian area along the north of Africa, the Berber Hamites, including Tuaregs, Suluhs, and Kabyles, occupy the littoral region and the Sahara. They are the descendants of the oldest-known inhabitants of this territory, who were believed to have been the founders of the Mediterranean race.

7. Tibus, or Tubus, Hamites of the Sahara north of Lake Chad, mixed with negroes. Their speech is of doubtful affiliation.

8. Fulah, or Fulbe, in extreme West Africa, in Futa-tor and Futa Jallon.

9. Guanches, ancient Hamites of the Canaries. Meinhof has promulgated the revolutionary view that not only Hausa, but even Hottentot, is to be classed with the Hamitic languages. Sapir accepts Meinhof's opinion as very probable for Hausa, but admits at best a bare possibility that Hottentot was once affected by Hamitic influence. This linguist also definitely rejects the inclusion of Fulah in the Hamitic stock and looks upon Masai as possibly (but not yet demonstrably) a member of the family.

Each of the separate peoples here named is described in its proper place. Among the Hamites are tribes that show blond characteristics, but it cannot be decided whether this is due to albinism or to invasion of Teutonic nations. The standard color is dark brunette; the hair is black and curly; the body is over medium height and in some tribes of great stature. The Hamites have in recent years come into especial prominence through their connection with the origin of Mediterranean peoples and early culture, some ethnologists tracing their type into the heart of Europe. Hamitic speech in its three varieties, Egyptian, Ethiopian, and Berber, belongs to the inflected class, near to the Semitic, from which it has been separated for millenniums. The oldest writing in the world is the hieroglyphic inscriptions placed on their monuments by the Hamitic Egyptians. They also were the earliest engineers, machinists, and architects in massive stones. Consult: Sergi, *Africa: Antropologia della stirpe camitica* (Turin, 1897); Stanford, *Africa* (London, 1907); Keane, *Man, Past and Present* (ib., 1899); Meinhof, *Die Sprachen der Hamiten* (Hamburg, 1912); Sapir, in *Current Anthropological Literature*, vol. ii (Lancaster, Pa., 1913).

HAMITIC LANGUAGES. See **AFRICAN LANGUAGES.**

HAM'LET, or **HAMLETH**. See **AMLETH**.

HAMLET. An opera by Ambroise Thomas (q.v.), first produced in Paris, March 9, 1868; in the United States in 1872 (New York).

HAMLET. 1. The common spotted moray (q.v.). 2. The Bermuda grouper. See **GROUPE**.

HAMLET. The longest and profoundest of Shakespeare's tragedies, acted before 1602, when it was entered at the Stationers' Register. The first quarto of 1603 was doubtless a pirated and imperfect copy of the original play; and the second quarto of 1604 was taken from a shortened stage version. The drama is included in the folio of 1623. The story of Hamlet appears first in Saxo Grammaticus' *Historia Danica*, adapted by Belleforest about 1560 in his *Histoires tragiques*. The story was used in a lost play of 1589, probably by Kyd, which Shakespeare worked over and subsequently elaborated into the present form. See **AMLETH**.

HAMLEY, SIR EDWARD BRUCE (1824-93). An English general and author, son of Vice Admiral William Hamley, born at Bodmin, and educated at Woolwich. He was gazetted to the artillery and sent to Ireland in 1843 and served in Canada in 1844-48. Returning to England, he became a popular contributor to *Fraser's Magazine* in 1849. He was sent to Gibraltar in 1850. In 1854 he was made adjutant, and later became aid, to Sir Richard Dacres and served through the Crimean War. He was appointed professor of military history at Sandhurst in 1859 and occupied the position until 1865. In 1882 he went with Sir Garnet Wolseley to Egypt, fought at Tell-el-Kebir, and was much aggrieved that his division was not recognized, insisting that it had won the day. He was made general in 1890, as a recompense for his ill treatment. Hamley's best-known works are: *The Operations of War Explained and Illustrated* (4th ed., 1878), used as a textbook; *The Story of the Campaign of Sebastopol* (1855); *The War in the Crimea* (1891); *Lady Lee's Widowhood* (1853); and reprints from *Blackwood's Magazine*, with which he was long connected. Consult Shand, *The Life of General Sir Edward Bruce Hamley* (Edinburgh, 1895).

HAM'LIN, ALFRED DWIGHT FOSTER (1855-1926). An American architect, born at Constantinople, Turkey, the son of Cyrus Hamlin (q.v.). He graduated at Amherst in 1875, studied architecture at Boston and Paris, and after 1883 was engaged chiefly in teaching in the School of Architecture of Columbia University, of which he was director in 1903-1912. Besides many articles in the professional magazines, and contributions on architecture to the *NEW INTERNATIONAL ENCYCLOPEDIA* (1902-04; 2d ed., 1914-15), he was the author of *A Text-book of the History of Architecture* (1896) and, in collaboration, of *European and Japanese Gardens* (1902).

HAMLIN, CHARLES SUMNER (1861-). An American lawyer and public official, born in Boston. He graduated from Harvard College in 1883 and from Harvard Law School in 1886, and thereafter practiced law at Boston. Participating in Democratic national politics, he was Assistant Secretary of the Treasury in 1893-97, and was appointed to the same position again in 1913, and in 1914 he was chosen by President Wilson chairman of the new Federal Reserve Board. In 1897 he served as commissioner to Japan, and as commissioner also at conventions between Russia, Japan, and the United States,

and between England and the United States. He lectured at Harvard on government in 1902 and 1903; in 1912 was vice president of the Woodrow Wilson College Men's League and president of the Woodrow Wilson League of Massachusetts; and he published, besides pamphlets on statistical and financial subjects, an *Index Digest of Interstate Commerce Laws* (1907).

HAMLIN, CYRUS (1811-1900). An American Congregational missionary and educator, the father of A. D. F. Hamlin. He was born at Waterford, Me., and graduated at Bowdoin College in 1834, and at Bangor Theological Seminary in 1837. In the latter year he went to Constantinople, as a missionary under the direction of the American Board. In 1860 he began the work of establishing Robert College at Constantinople, and succeeded in spite of the strong opposition of the Turkish authorities. He acted as its president until 1876, and then became professor of dogmatic theology in Bangor Seminary. In 1880 he was elected president of Middlebury College, Vermont, which post he retained till 1885. He published *Among the Turks* (1878) and *My Life and Times* (1893).

HAMLIN, HANNIBAL (1809-91). An American political leader, Vice President of the United States in 1861-65. He was born at Paris Hill, Me., and prepared for college at Hebron Academy, but his father's death prevented his taking a college course. After some years spent in running the home farm and a short period as proprietor of a country weekly at Paris, he studied law, was admitted to the bar, and in 1833 began practice at Hampden, Me. His long political career of almost a half century began in 1835 with his election to the lower branch of the Maine Legislature as a Democrat. To this he was a number of times reelected, and served as its presiding officer in 1837, 1839, and 1840. In the last year he was a Democratic nominee for Congress, but was defeated in the Whig landslide of that year. Two years later he was elected to the Twenty-eighth Congress, and was reelected to the Twenty-ninth, serving from 1843 to 1847. Early in his congressional career he took a pronounced stand as an anti-slavery man, opposed the annexation of Texas, and drew particular attention to himself by introducing the famous Wilmot Proviso (q.v.) during the temporary absence of its author, and securing its acceptance by the House by a vote of 115 to 106. In 1848 he was elected to the United States Senate to fill a vacancy caused by the death of Senator Fairfield. In spite of his action in speaking and voting against Clay's compromise measures, he was reelected for a full term of six years in 1851. Before the completion of this term, however, he had taken an active part in the founding of the Republican party, and resigned his seat in the Senate in 1856 upon being elected by that party Governor of his native State. In 1857, however, he resigned from the governorship to resume his seat in the Senate, to which he had been reelected, and where he thought he could be of more use to the antislavery cause than in the Governor's chair. He remained in the Senate until after his election, in 1860, as Vice President of the United States on the ticket with Abraham Lincoln. During the Civil War he was a valued adviser of President Lincoln, and the relations between the two were especially intimate. He was again United States Senator, 1869-81, and

was Minister to Spain, 1881-83. Consult C. E. Hamlin, *Life and Times of Hannibal Hamlin* (Cambridge, 1899).

HAMLINE, LEONIDAS LENT (1797-1865). An American Methodist Episcopal bishop, born in Burlington, Conn. He studied for the ministry, but afterward read law, and practiced in Ohio. In 1830, however, he became a preacher in the Methodist church, in 1836 was chosen assistant editor of the *Western Christian Advocate*, and four years later chief editor of the *Ladies' Repository*. In 1844, when the Methodist church divided on slavery, he was a member of the General Conference, and drew up the plan of separation. He was elected Bishop at that session and served until 1852. Hamline University, Minnesota, was named in his honor. A number of his sermons are given in the *Works of L. L. Hamline, D.D.*, edited by Rev. F. G. Hibbard, D.D. (2 vols., 1869). Consult W. C. Palmer, *Life and Letters of Leonidas L. Hamline, D.D.* (New York, 1866).

HAMLINE UNIVERSITY. A coeducational college under the Methodist Episcopal church, located in St. Paul, Minn., at Hamline, midway between the centres of St. Paul and Minneapolis, founded in 1854. It was first located at Red Wing in 1854 until it closed in 1869. It was reopened in Hamline in 1880. It is purely a college of liberal arts and sciences, with an attendance of 400. The college faculty in 1914 consisted of 20. A modern library building with 15,000 volumes and a modern gymnasium, together with several other buildings adapted to classroom and laboratory work, were maintained in 1914. The value of the grounds and buildings was \$220,000; endowment about \$800,000, and income from all sources, \$59,000. The president in 1914 was S. F. Kerfoot, D.D.

HANNM, hām. The capital of a district in the Prussian Province of Westphalia, situated at the confluence of the Ahse with the Lippe, 23 miles northwest of Arnsberg (Map: Germany, B 3). It is surrounded by old ramparts and a moat, and contains a Roman Catholic church dating from 1510, and an old Gymnasium. It is at the junction of several railroad lines, and produces iron and steel goods, wire, machinery, enamel ware, bridge materials, agricultural implements, iron furniture, gloves, flour, liquors, starch, leather, bricks, brushes, baskets, chemicals, lacquer, varnish, lumber, and tin. At Bad Hanm in the vicinity are thermal baths. It was formerly the capital of the County of Mark and a member of the Hanseatic League. Pop., 1900, 31,371; 1910, 43,663.

HAMMACHER, hām'āg-ēr, FRIEDRICH (1824-1904). A German politician, born at Essen, and educated at Bonn and at Berlin, where he studied law. He had to leave the government service in 1850 because of his part in the rising of '48, and went into business. He soon became interested in the mining industries of the Rhine District and of Westphalia, and founded at Dortmund a union for mining interests. A member of the Prussian House of Deputies (1864-85), and of the Reichstag from 1869 to 1898, with two interruptions, he was one of the founders and leaders of the National Liberal party; took an especial interest in economic questions, and drew up the declaration of more than 200 deputies, which, in 1878, altered Bismarck's commercial policy. He was one of the promoters of the government system of

railroads in Prussia in the following year, and a founder and director of the German Colonial Union. In 1889 he mediated the disagreements between the Rhenish Westphalian miners and mine owners in the coal strike of that year.

HAMME, hām'me or hām. A town in the Province of East Flanders, Belgium, situated on the right bank of the Durme, 13 miles east-northeast of Ghent. It contains grain and oil mills, has manufactures of lace, ribbons, and linen, and carries on trade in flax. Pop., in 1900, 13,755; in 1910, 14,178.

HAMMER (AS. *hamor*, Icel. *hamarr*, OHG. *hamar*, Ger. *Hammer*; connected with OChurch Slav. *kamy*, Lith. *akmū*, stone, Gk. *ἀκμῶν*, *akmōn*, anvil, Skt. *akman*, stone). A tool used for applying the force of impact either for the purpose of beating or forging malleable materials into a specific shape, or for driving nails, spikes, wedges, etc. Hammers may be divided into two general classes, viz., hand hammers and power hammers. Hand hammers are made in a variety of forms to suit the particular purposes for which they are employed. They are all made with a steel or iron head set crosswise of a wooden handle. The part of the hammer which strikes the work is called the face, and the opposite part is called the peen. The peen of the ordinary carpenter's hammer is bent, and has a V-shaped notch to permit its use as a lever for drawing nails; that of a geologist's hammer is wedge-shaped, etc. Many hammers have two faces, either of which may be used indifferently. Hammers of large size requiring the use of both hands to wield them are commonly called sledges, and usually have two faces.

Power hammers are of several forms, the most important of which is the direct-acting steam hammer and its modifications, the drop press and drop hammer. One of the oldest forms of power hammer is the tilt hammer, which consists essentially of a handle working on a horizontal axis at or near one end, and having a head at the other end. The handle and head are usually made of iron, and very heavy. This type of hammer is operated by a cam or eccentric (see CAM; ECCENTRIC), or by a steam cylinder, which swings up the head end one or two feet and lets it drop. An anvil placed so as to receive the blow is an essential part of the mechanism. Various modifications of this simple device have been devised, but, like the original form, they have become practically obsolete in forging operations, having been replaced by the direct-acting steam hammer. This tool was invented by James Nasmyth, who first conceived the invention in 1830, but did not patent it until 1842. Meanwhile a steam hammer had been actually built at the ironworks of Le Creusot, France, the idea of which, according to English writers, had been obtained from Nasmyth's preliminary sketches, to which the French builders had had access. Be this as it may, the fact is that the first Nasmyth hammer was erected at the Bridgewater Foundry at Patricroft, near Manchester, England, in 1843. This hammer consisted of two vertical uprights or columns surmounted by an entablature, which carried an inverted vertical steam cylinder midway between the two columns. In this cylinder was a piston, with a piston rod projecting downward between the two columns and carrying at its end a casting which formed the hammer proper. An anvil block occupied the space between the feet of the columns, and received the blow of the hammer.

To operate the hammer steam was admitted to the cylinder below the piston, which raised it with its attached piston rod and hammer to any height desired, limited by the height of the cylinder; when at the desired height the steam was allowed to escape into the air, and the piston and its attachments fell by gravity. The force of the blow depended upon the weight of the hammer and the height of the fall. The hammer was worked by means of an ordinary slide valve and a long lever, requiring great labor and constant attention in order to give the blow required; so that some contrivance capable of adjustment was necessary in order to have complete command over the power of the blow, and in order that, the instant the blow was struck, the block should rise again, so that not only no loss of time should ensue, but that the heat in the mass of iron on the anvil might not be reduced or carried off by the cold face of the block. The peculiar difficulty of securing a true automatic arrangement will be seen when it is considered that the instant of percussion must vary with almost every blow that is struck; for the piece on the anvil becomes thinner and thinner by each succeeding blow, and in flat bars a blow is first given on the flat side, and then on the edge, the difference in the fall of the hammer in the two cases being oftentimes several inches; and further, that the hammer must be under perfect control at all times.

Nasmyth, after many and protracted trials, failed to produce the motion required, and, as a consequence, the whole hammer scheme was on the point of being abandoned. In this dilemma, and during Nasmyth's absence from the works, his partner, Gaskell, applied to their engineering manager, Robert Wilson, who afterward became managing partner and successor to Nasmyth, to endeavor to solve the problem which had hitherto baffled the skill of Nasmyth. Wilson took the matter in hand, and in little more than a week a mechanism was invented and attached to a hammer upon which former experiments had been made, and was at once found to answer most admirably every condition

respect, the long lever and the hard work before referred to being now entirely banished. By simply altering the position of the tappet lever by means of two screws, a blow of the exact force required could be produced and continued so long as steam was supplied. On Aug. 18, 1843, the first hammer was delivered to the Low

STEEL HAMMER.

For forging iron and steel.

Moor Iron Works, near Bradford, Yorkshire, and gave such satisfaction that orders for this remarkable tool began to flow in from all parts of the country. The hammer remained in this condition, with the exception of a few minor details, from 1843 to 1863, when Wilson (who had become connected with the Low Moor Iron Works) invented, patented, and applied to the hammers at Low Moor and elsewhere what is called the "circular balanced valve." He later devised for the steam locomotive a balanced slide valve, in which, by a most ingenious arrangement, the valve is allowed to float, as it were, in an atmosphere of steam pressing equally upon it on every side, entirely doing away with all superincumbent pressure upon the valve, no matter what the pressure in the boiler may be. The great advantage of this invention will be apparent when it is stated that hammers are now made of such a size that if the valve were not balanced a small steam engine would be required to move it. In June, 1861, Wilson patented and introduced another very important improvement, popularly known as the *double-acting hand-gear motion*. By this arrangement the steam is admitted as before to raise the piston, and when it has attained the required elevation, and at the very moment when about to descend, by slightly increasing the travel of the hand lever (more than when working single-acting), the steam is admitted into the cylinder above the piston, which accelerates and increases the intensity of the falling blow and the consequent capacity of the hammer so much that a 5-ton hammer is, by this double-action arrangement, increased to at least a 12½ or 15 ton one.

Since 1861 the chief improvements in steam

STEAM HAMMER.

required. Under the influence of this very beautiful mechanical device every variety of blow could be given—from the gentlest tap to the heaviest blow within the compass of the hammer—and that, too, perfectly self-acting in every

hammers have been in the nature of mechanical improvements in detail and construction to enable larger hammers to be built. A steam hammer of great size was erected at the Bethlehem Steel Works, South Bethlehem, Pa., in 1889, to be used in forging armor plates and other large steel objects. The steam cylinder was 76 inches in diameter, and had a stroke of 16½ feet, and the weight of the moving parts was 125 tons; the anvil was made up of three 22-inch iron blocks, each weighing 70 tons. This hammer has been torn down and replaced by an hydraulic press. At Perm, Russia, there is a 50-ton hammer; at the Terni Steel Works, in Italy, one of 100 tons; at the Krupp Works at Essen, Germany, one of 50 tons; at Woolwich Arsenal, England, one of 25 tons; and at Le Creusot, France, one of 50 tons. Recently steam hammers have been replaced by hydraulic presses for forging armor plate and similar large forgings, and they are now seldom built in the large sizes stated above. In smaller sizes for making drop forgings (see *FORGE, FORGING*), and for forging the vast majority of smaller work, they are still extensively used. In some works compressed air is used in place of steam for operating their hammers. For a description of a class of compressed-air-operated hammers for light work, such as driving rivets, calking, etc., see *PNEUMATIC TOOLS*. The steam hammer doubtless ranks as one of the most important economic inventions of all time.

HAMMER, hām'mēr, JULIUS (1810-62). A German poet, born in Dresden. He studied law at Leipzig, but in 1834 made the acquaintance of Tieck and Theodor Hell by his play *Das seltsame Frühstück*, and decided to devote himself to literature. It was largely due to him that the Schiller Society was formed at Dresden in 1855. His early fiction is of comparatively small value, only *Einkkehr und Umkehr* (1856) deserving mention; and his dramatic attempts met with little success and had not much worth. He is best known for his lyric-didactic poetry: the popular collection of proverbs, *Schau um dich und schau in dich* (1851; 33d ed., 1892); *Zu allen guten Stunden* (1854); *Fester Grund* (1857); *Auf stillen Wegen* (1859); *Lerne, liebe, lebe* (1862), all republished many times. He also published a poetic version of the Psalms, *Die Psalmen der heiligen Schrift* (1861); *Unter dem Halbmond* (1860); and the religious anthology *Leben und Heimat in Gott* (13th ed., 1896). Consult *Ende, Julius Hammer* (Nuremberg, 1872).

HAM'MER, THE. A popular name for Judas Maccabæus.

HAMMER, WILLIAM JOSEPH (1858-). An American electrical engineer, born at Cressona, Schuylkill Co., Pa. He was educated at Newark, N. J., and studied also in various European universities and technical schools. Early an assistant of Thomas A. Edison at Menlo Park, N. J., he was chief engineer of the English Edison Company (1881-82) and of the German Edison Company (1883-84); represented the Edison interests at various expositions; and had charge of the Boston Edison Electric Illuminating Company for one year. He received the John Scott and Elliott Cresson medals from the Franklin Institute, was vice president of the American Institute of Electrical Engineers, and for 10 years was president of the National Conference on Standard Electrical Rules. Besides papers on electrical engineering,

he is author of *Radium and Other Radio-active Substances* (1903).

HAMMER AND SCOURGE OF ENGLAND, THE. A popular title for Sir William Wallace.

HAMMER BEAM. A horizontal beam projecting inward from the foot of a main rafter, the inner end supported by a bracket from the wall below; it supports in turn a vertical strut and the foot of a half arch of curved timber which meets its opposite fellow under the centre of a collar beam connecting the rafters. The projecting end of the hammer beam beyond this framing is often carved. The hammer-beam framing is employed in order to dispense with tie beams or rods; it was developed by the English mediæval builders into the most beautiful of all forms of artistic roof carpentry. The finest example is that of Westminster Hall, London (1399-1510).

HAMMERFEST, hām'mēr-fēst. A seaport of Norway and the most northern town in the world, situated in lat. 70° 40' 11" N. and long. 23° 45' E., on the west shore of the island of Kvalø, in a barren, treeless district (Map: Norway, G 1). The town is built almost entirely of wood. The sun is above the horizon, day and night, from the 13th of May to the 29th of July. Its absence for several months in the winter has led to the extensive introduction of electric lighting, the power being derived from waterfalls. The chief occupations of the people are the production of cod-liver oil, and walrus hunting. There is an excellent and sheltered harbor frequented by shipping from all over Europe, and from it are dispatched the whaling and fishing fleets which work the polar seas. There is an active trade with the Russian port of Archangel, the chief exports being fish and train oil. Pop., 1901, 2208; 1911, 2709.

HAMMERHEAD, or HAMMERFISH. 1. A shark of the genus *Sphyrna*, consisting of four or five species, and constituting a family, Sphyrnidae, distinguished from all other fishes by the extraordinary form of the head, which in the adults resembles a double-headed hammer, with the eyes at the ends of the lateral extensions. The mouth is below the centre of the head. Some of the species attain a length of 15 feet, and are very voracious. The great hammerhead (*Sphyrna zyggæna*) is found in all warm seas, occurring on the coasts of the United States and Europe. These sharks are ovoviviparous, and produce about 40 young at a birth. See *PLATE OF GREAT SHARKS*. 2. See *HAMMERKOP*.

HAMMERHEAD BAT. An extraordinary fruit-eating bat (*Hypsignathus monstrosus*), discovered about 1860 by Du Chaillu in the Gabon region of West Africa. It is about 5 inches long, and has the nose greatly swollen and prolonged, as shown in the illustration of its head on the *PLATE OF BATS*. Nothing is known of its habits.

HAMMERICH, hām'mēr-ik, MARTIN JOHANNES (1811-81). A Danish linguist and teacher, brother of Peter Frederik Adolf Hammerich, historian and theologian. He studied theology, but early showed interest and marked ability in mythology and philology; received his degree in 1836, was instructor of Sanskrit at Copenhagen from 1841 to 1844, and was head of a Gymnasium at Christianshavn. His important works are: a translation of the *Sakuntala* of Kalidasa (last edition, 1879); *Om Ragnarök-*

smøythen (1836); *Bidrag til en Skildring af Holberg* (1858); *Ewalds Lærned* (1860); *Danmark-Norges Litteratur i kort Overblik* (1864); *Thorvaldsen og hans kunst* (1870).

HAMMERKOP, hām'ēr-kōp'. The Dutch name in South Africa for a bird, the umbrette (q.v.), Anglicized as "hammerhead."

HAMMER OF HERETICS. A title applied to St. Augustine; also to Pierre d'Arly, president of the Council of Constance (1414-18).

HAMMER OF THE SCOTCH, TINE. A popular name for Edward I of England. It appears on his tombstone in Westminster Abbey.

HAMMER-PURGSTALL, hām'er-pürk'shtāl, JOSEPH BARON (1774-1856). An Austrian historian and Orientalist, born at Graz. He studied in the Oriental Academy of Vienna, took part in the publication of an Arabic-Persian-Turkish lexicon, and was appointed interpreter to the Internuncio at the Porte in 1799 and took part in the expedition under Sidney Smith against the French. He continued in the Austrian diplomatic service until 1817, when he was made Aulic Counselor. In 1847-49 he was president of the newly established Academy of Sciences of Vienna. Meanwhile he wrote constantly on many subjects connected with the history and literature of the Orient. He translated from the Arabic, Persian, and Turkish works previously unknown in Europe. One of his most important contributions was the *Litteraturgeschichte der Araber* (7 vols., 1850-56), and one of his best known, the *Diwan des Hafis* (1813). He also wrote the *Geschichte der Assassinen* (1818; Eng. trans. by Wood, London, 1835); *Geschichte der osmanischen Dichtkunst* (1836-37); *Geschichte des osmanischen Reiches* (2d ed., 4 vols., 1840); *Geschichte der Goldenen Horde in Kiptschak* (1840); *Geschichte der schönen Redekünste Persiens* (1818); *Leben des Kardinals Khlesl* (4 vols., 1847-51); *Porträtgalerie des steiermärkischen Adels* (1855); etc. Consult Schlottmann, *Joseph von Hammer, ein kritischer Beitrag* (Zurich, 1857).

HAMMER SHELL. An Oriental bivalve mollusk, of the wingshell family (Aviculidae)

HAMMER SHELL.

and genus *Mallus*, remarkable for the T shape of its shells, which are expanded along the hinge margin. It is also called "hammer oyster," and the flesh is eaten.

HAMMER-SMITH. A metropolitan borough of London, England, on the left bank of the Thames, 6 miles west-

southwest of St. Paul's; formerly a suburban village with large nursery and market-gardening interests (Map: London, F 5). Hammer-smith mainly consists of rows of residential streets occupied by the lower middle and poorer classes, though here and there there are aristocratic and artistic colonies. Schools are numerous. St. Paul's School, founded as an adjunct to St. Paul's Cathedral in 1509, moved to Hammersmith in 1883, and now ranks as one of the chief English public schools. There are many Roman Catholic religious houses, chief among which is Nazareth House, while in the north of the borough is the great Roman Catholic cemetery of Kensal Green. William Morris,

the poet and craftsman, lived here for the greater part of his life. Pop., 1901, 112,243; 1911, 121,521.

HAMMERSTEIN, hām'er-stīn, OSCAR (1847-1919). An American operatic impresario, born in Berlin, Germany. As a lad of 16 he came to America and after a checkered career as cigar maker, inventor, and playwright he drifted in 1870 into the theatrical business as lessee and manager of the old Stadt Theatre in New York, thereby laying the foundation for his subsequent considerable fortune. In 1888 he built his first theatre, the Harlem Opera House, in New York, which was followed in rapid succession by several other playhouses, of which the New York Theatre (originally opened as the Olympia), the Belasco, and the Victoria (vaudeville) were particularly successful places of amusement in New York. In 1906 he opened the Manhattan Opera House, which he had planned for the production of opera in English at popular prices. But before the building was completed he changed his plans and opened the theatre with a grand-opera company of artists of the first rank in open rivalry with the long-established Metropolitan Opera House. As sole manager of this hazardous undertaking he displayed a shrewdness, courage, and enterprise nothing short of genius. It was he who placed French opera in America upon a firm footing. The spirit of rivalry brought about a vast improvement in all the departments of the Metropolitan company, and became a powerful stimulus for the production of novelties at both houses. Artists' salaries soared to fabulous heights. At the end of the fourth season Hammerstein was at the end of his resources, and sold his interests to his rival for the sum of \$2,000,000 (1910), agreeing at the same time not to enter the field of grand opera for 10 years in any territory controlled by the Metropolitan interests.

While managing the Manhattan Opera House Hammerstein yet found time to build and open the Philadelphia Opera House in 1908, which, however, he sold early in 1910. Then he transferred his field of operations to London, where, in 1911, he opened the London Opera House, which he conducted along the same lines as formerly the Manhattan. But the English capital showed very little interest in French opera, and at the end of a disastrous season he abandoned the project. In spite of his agreement with the Metropolitan company he built in 1912 the American Opera House in New York. He had already signed contracts with artists for a new grand-opera company and announced the opening date, when the courts intervened, compelling him to abide by his agreement with the Metropolitan. Consequently, when the new house was opened in 1914, it was an ordinary theatre under the name "Lexington Theatre." For details of the operatic war, consult the NEW INTERNATIONAL YEAR BOOK for the years 1907-14 under title "Music."

HAMMOCK (a word probably of Indian origin, also spelled *hamak* and *hommock*; confused by some nineteenth-century writers and printers with *hummock*, dim. of *hump*). A localized area characterized by the type of vegetation peculiar to the coastal plain of the southeastern United States, and more common in Florida than elsewhere. In general a hammock is a comparatively dense forest composed mostly of trees other than pines, not subject

to inundation (and thus distinguished from a swamp), in a region where open pine forests or prairies predominate. In Florida hammocks are sometimes classed as high and low, according to their topographic position and the amount of moisture in the soil; or light and heavy according to the stand of vegetation and the texture of the soil. The soil may be either sand or clay, or underlaid by marl ("marl hammock"), shells ("shell hammock"), or limestone, but it is always covered with more or less humus, which accumulates in the shade of the trees. The formation of humus in the surrounding pine forests is prevented by frequent ground fires; but the hammocks are usually protected from fire on one or more sides by streams or other topographic features.

The trees in hammocks include both evergreen and deciduous species. In southern Georgia and northern Florida some of the commonest ones are water oak (*Quercus laurifolia*), magnolia (*Magnolia grandiflora*), holly (*Ilex opaca*), dogwood (*Cornus florida*), spruce pine (*Pinus glabra*), loblolly pine (*Pinus taeda*), red bay (*Persea*), hickory (*Hicoria glabra*), hop hornbeam (*Ostrya*), beech (*Fagus*), and sugar maple (*Acer floridanum*). But in extreme southern Florida the hammock trees are nearly all West Indian broad-leaved evergreens, unknown farther north.

Hammock land is considered the most fertile in Florida, and the oldest settlements in that State, other than seaports, are located in or near hammocks. For further information, consult almost any descriptive work on Florida; also Harper, in *Science*, Sept. 29, 1905 (New York); the third and fourth annual reports of the Florida Geological Survey (1910 and 1911); and *United States Bureau of Soils, Soil Survey of the Ocala Area, Florida* (Washington, 1912).

HAMMOCK. The apparatus in which a sailor slings his bed derives its name through the Spanish *hamaca*, from a Peruvian word, the custom of thus suspending a bed having been derived from Peru, where the natives fasten the two ends of a piece of canvas, or of a netting of grass twist, to the branches of a tree. A sailor's hammock consists of a rectangular piece of hempen or cotton canvas, about 6 feet long and 3 in width, gathered together at each end by means of cords and a clew, and hung to hooks under the deck. The hammock thus suspended forms a sort of bag capable of containing the sailor's mattress, his blankets, and himself, as soon as he has acquired the far from easy knack of climbing into it. The hammocks are taken below at sunset and hung in rows about 2 feet apart, in the men's portion of the ship. When done with in the morning the bedding is carefully tied up within each, and the whole stowed in the *hammock netting*, which is no longer a netting, but is a locker or box-shaped receptacle, and is generally in the bulwarks of the waist or below decks.

HAMMOND. A city in Lake Co., Ind., 21 miles south by east of Chicago, Ill.; on the Grand Calumet River, and on the Erie, the Michigan Central, the Pennsylvania Company, the Chesapeake and Ohio of Indiana, the Pere Marquette, the Wabash, and several other railroads (Map: Indiana, B 1). With its exceptional railroad facilities, the city is of considerable importance as a commercial and manufacturing centre. The industries include

extensive chemical works, a bookbindery, woolen mills, foundries, a distillery, starch works, brickyards, and manufactories of beds, lounges, mattresses, railway equipment, agricultural machinery, glue, pianos, and surgical instruments. The city contains a Carnegie library, St. Margaret's Hospital, fine courthouse and Federal buildings, and four large parks. Settled in 1860, Hammond was incorporated in 1883, the charter of that date being still in operation. The government is vested in a mayor, chosen every four years, and a city council, which elects administrative officials. The water works are owned by the municipality. Pop., 1890, 5428; 1900, 12,376; 1910, 20,925; 1914 (U. S. est.), 24,481; 1920, 36,004.

HAMMOND. A city in Tangipahoa Parish, La., 52 miles north-northwest of New Orleans, on the Illinois Central and the Yazoo and Mississippi Valley railroads (Map: Louisiana, H 5). It is in an agricultural and fruit-growing region, ships large quantities of milk and strawberries, and has two saw mills. Hammond adopted the commission form of government in 1913. Pop., 1900, 1511; 1910, 2942.

HAMMOND, ANTHONY (1668-1738). An English literary parliamentarian. He was born in Huntingdonshire, for which he was elected a member of Parliament in 1695. As a fluent and well-informed speaker on financial questions, he soon gained a considerable reputation, but his lack of tact stood in his way. He was twice chosen as member for Cambridge University, and in 1701 was appointed a commissioner for stating the public accounts. The following year he was made a commissioner of the navy, under Godolphin's administration. After another term as member of Parliament he went in 1711 to Spain as paymaster of the British forces there, but soon retired and devoted himself to literary pursuits. In 1720 he edited a *New Miscellany of Original Poems, Translations, and Imitations*, and he also published several pamphlets on political and financial subjects.

HAMMOND, EDWARD PAYSON (1831-1910). An American evangelist. He was born at Ellington, Conn.; graduated at Williams College in 1858, and studied theology at Union Theological Seminary, New York, and at the Free Church Seminary, Edinburgh. After being ordained to the Presbyterian ministry in 1862, he engaged in evangelistic work in the United States, Canada, and Great Britain, and was specially interested in work for the young. He wrote many tracts and small books, and a number of hymns for use in his work. His work is described by Headley, in *Harvest Work of the Holy Spirit* (Boston, 1884).

HAMMOND, HENRY (1605-80). A learned English divine and controversial writer, born at Chertsey, Surrey. He was educated at Magdalen College, Oxford, in 1629 became rector of Penshurst, and in 1643 Archdeacon of Chichester. His devotion to Charles I cost him the living; nevertheless he continued to act as chaplain to the King until 1647, when all the royal attendants were dismissed. After that he was subdean of Christ Church, Oxford, but was soon imprisoned, for 10 weeks, and spent the rest of his life in Worcestershire. His separate works numbered 58, the most celebrated of which are the *Practical Catechism* (1644) and *Paraphrase and Annotations on the New Testament* (1653). His *Miscellaneous Theological Works* were published in the "Library of Anglo-Catholic The-

ology" (1847-50). His *Life*, by Fell, Bishop of Oxford (London, 1861), is a charming biography. It is reprinted in Wordsworth's *Ecclesiastical Biography*, vol. v (2d ed., 1818).

HAMMOND, JABEZ D. (1778-1855). An American author and politician, born in New Bedford, Mass. He practiced medicine in Vermont, but afterward studied law and followed that profession at Cherry Valley, N. Y. He was a Democratic Congressman from New York in 1815-17, a State Senator in 1817-21, and in 1825 was made a commissioner in the settlement of the claims of New York against the Federal government. In 1838 he was elected county judge at Albany, where he had lived since 1822, and he was one of the regents of New York University from 1845 until his death. His published works include: *The Political History of New York to December, 1840* (2 vols., 1843); *Life and Opinions of Julius Melbourn* (1847); *Life of Silas Wright* (1848).

HAMMOND, JAMES BARTLETT (1839-1913). An American typewriter inventor. He was born in Boston, graduated from the University of Vermont in 1861 and, after serving in the Civil War as a newspaper correspondent, from Union Theological Seminary; and he studied also in Germany. Turning his attention to mechanical improvements, in 1880 he invented one of the first typewriting machines that was built on scientific principles and with a true alignment. In 1884 his typewriter was placed on the market, and its manufacture netted him a large fortune.

HAMMOND, JAMES HENRY (1807-64). An American politician. He was born in Newberry District, S. C., graduated at South Carolina College in 1825, and was admitted to the bar in 1827. In 1830 he became editor of the *Southern Times*, published at Columbia, S. C. He was a Representative from South Carolina in the Twenty-fourth Congress until Oct. 30, 1836, when he resigned. He was Governor of South Carolina in 1842-44, and was a member of the United States Senate in 1858-60. Both as an editor and as a member of Congress he was a vigorous exponent of nullification and States' rights, and a defender of the institution of slavery. Several letters written by him in defense of slavery, as a reply in part to an antislavery circular by Clarkson, were published, with various essays advocating the same view, in a volume entitled *The Pro-Slavery Argument* (1853).

HAMMOND, JOHN HAYS (1855-). An American mining engineer, born in San Francisco. He graduated at Sheffield Scientific School (Yale) in 1876, and after a course at the mining school at Freiberg, Germany, he was appointed mining expert on the United States Geological Survey and Mineral Census for the examination of California gold fields. In 1882 he became superintendent of silver mines at Sonora, Mexico. Afterward he was consulting engineer to a mining company at Grass Valley, Cal.; to an iron company in San Francisco; to the Southern and Union Pacific railway companies; to the various mining companies operated by a London firm in South Africa (appointed 1893); to the British South Africa Company, known as the Chartered Company; to the Consolidated Gold Fields Company; and to other organizations of promoters acting in South Africa. He was connected with the Jameson raid (see JAMESON, LEANDER STARR), was tried for complicity in the revolt against the South African Republic, and was sentenced to death.

This sentence was, however, commuted to 15 years' imprisonment, and later Hammond was released by the Boer authorities upon the payment of a fine of \$125,000. Afterward he was for a time in London, and finally he returned to the United States. He became largely interested in important mining interests in this country and in Mexico, and also in various hydroelectric enterprises, irrigation projects, etc. He lectured at Columbia, Harvard, Yale, and Johns Hopkins universities, and in 1907 was elected president of the American Institute of Mining Engineers. In 1910 he was the special representative of President Taft at the coronation of King George V.

HAMMOND, ROBERT (1621-54). A soldier in the English Civil War. He was born in Surrey, was educated at Oxford, and in 1643 was appointed captain in one of the cavalry regiments of the Parliamentary forces which were then being organized. He was made colonel of an infantry regiment in 1645. He was present at the battle of Naseby, and at the capture of Bristol and of Dartmouth. In the struggle which soon afterward began between the army and Parliament, Hammond at first sided with the former, but his scruples finally compelled him to change his mind, and he resigned from military service, accepting the appointment of Governor of the Isle of Wight. King Charles I, believing that he would be befriended by Hammond, threw himself upon the latter's protection; but Parliament ordered the King to be kept in custody, a duty which the Governor performed from Nov. 13, 1647, to Nov. 20, 1648. In 1654 Hammond was appointed by Cromwell a member of the Irish Council, but he died in Dublin shortly after his arrival.

HAMMOND, SAMUEL (1757-1842). An American Revolutionary soldier. He was born in Richmond Co., Va., and as a youth took part in Indian warfare. In the Revolution he participated in the battles of King's Mountain, Cowpens, and Eutaw Springs. In 1803-05 he was a member of Congress from Georgia; from 1805 to 1824 was military and civil Governor of Upper Louisiana; and from 1831 to 1835 was Secretary of the State of South Carolina.

HAMMOND, WILLIAM ALEXANDER (1828-1900). An American neurologist, born in Annapolis, Md. He graduated in medicine at New York University in 1848; was assistant surgeon in the United States army from 1848 to 1850, and surgeon from 1850 to 1860; professor of anatomy and physiology in Maryland University from 1860 to 1861; and again surgeon in the United States army from the outbreak of the rebellion in 1861. He was surgeon-general of the army, with the rank of brigadier general, from 1862 to 1864, when he was dismissed from the service upon the charge of official corruption after trial by court-martial. In 1878 President Hayes, under authorization of Congress, reviewed the findings of the court-martial, following which action Dr. Hammond was restored to his rank and placed on the retired list as a brigadier general. He was professor of mental and nervous diseases in Bellevue Hospital Medical College from 1867 to 1873, and occupied the corresponding chair in New York University from 1873 to 1892. In 1892 he became a founder of the New York Postgraduate Medical School, in which he was professor of mental and nervous diseases till his death. He established the *Quarterly Journal of Psychological Medicine*

and *Medical Jurisprudence* and was a founder of the *New York Medical Journal*. Among his works are: *Physiological Memoirs* (1863); *Military Hygiene* (1863); *On Wakefulness* (1866); *Insanity in its Medico-Legal Relations* (1866); *Sleep and its Nervous Derangements* (1869); *The Physics and Physiology of Spiritualism* (1871); *Diseases of the Nervous System* (1871); *Insanity in its Relations to Crime* (1873); *Cerebral Hyperæmia* (1895); *Treatise on Insanity* (2d ed., 1883), and several novels.

HAMMONTON. A town in Atlantic Co., N. J., 31 miles southwest of Philadelphia, Pa., on the Atlantic City and the West Jersey and Seashore railroads (Map: New Jersey, C 4). It is in a great fruit and poultry region; and its manufactures consist of shoes, cut-glass ware, domestic wines, underwear, hosiery, macaroni, optical instruments, etc. The water works and sewage system are owned by the town. Pop., 1900, 3481; 1910, 5088.

HAMMURABI, hām'ū-rā'pē, King of Babylonia (2124-2081 B.C.). He was the sixth ruler of the so-called first dynasty of Babylon, founded by the Amoritish chief Sumuabū (2232-2217), and a son of Simmuballit (2149-2124). In the beginning of his reign he probably recognized the suzerainty of the Elamitish King, Kudur Mabuk, and it is possible, though it cannot be strictly proved, that he accompanied another Elamitish king, Kudur Lagamar (see CHEDOLAOMER), on a raid into Syria, as is suggested by Gen. xiv. 1 ff. (See AMRAPHEL.) If the identification is correct, and the notice reliable, this event, in which Rim Sin of Larsa (see AROCH) also participated, is likely to have occurred c.2100 B.C., after the conquests of Mesopotamian cities which occupied the King during the first half of his reign. In 2094 he conquered Rim Sin, took possession of Emtul, and made himself independent of Elam. He seems to have forced his suzerainty on Assyria, whose ruler Samsi Adad I apparently was dependent on him, and whose great cities, Assur and Nineveh, he mentions as belonging to his realm. Beyond Emtul he does not seem to have possessed any part of Elamitish territory; and whether the title "adda Martu" shows that he held control of Syria is doubtful. It is as an organizer of his Empire that he became particularly famous. In his inscriptions he records the building of canals, the construction of a granary for the storing of wheat against times of famine, and numerous building enterprises in Babylon and other cities. The correspondence between the King and a high official, Sin-idinam, Governor of the Sumerian South, with the cities of Larsa, Ur, Uruk, and Lagash, which has been compared to that between Trajan and Pliny the Younger, throws a vivid light on the organization of the Empire. The King takes a personal interest in the administration of justice, the condition of the standing army, the development of the financial resources, the welfare of all classes of the population. He prides himself on being "the king of righteousness." To secure justice and prosperity he undertook an extensive codification of the law (see HAMMURABI, CODE OF), and reorganized the judiciary so as to transfer the judicial functions from the priesthood to the "elders" in the cities presided over by the governors of these cities, and to courts whose members were appointed for life by the King, from whose decisions appeal was possible to a supreme court in Babylon and the King himself.

The social life of Babylonia in the time of Hammurabi is more intimately known than that of any other period of its history. The determinative for god is sometimes used in connection with the King's name, but that may be due to the first part of it ('Ammu, or Hammu) being, rightly or wrongly, understood to be the name of a god; for from the time of this Amoritish dynasty the kings of Babylonia regarded themselves as the servants of the gods, but not as gods themselves, as their predecessors had done; the meaning of the second part of the name, known to be *rapi*, and not *rabi*, is uncertain. Hammurabi wrote his law in the Akkadian language that it might be understood by all, but also many bilingual inscriptions, in Sumerian and Akkadian. He was one of the greatest and noblest of all the kings that reigned in Babylonia. Consult: Winckler, *Geschichte Babyloniens und Assyriens* (Leipzig, 1892); Maspero, *Histoire ancienne* (Paris, 1897); Rogers, *A History of Babylonia and Assyria* (New York, 1900); King, *Letters and Inscriptions of Hammurabi* (3 vols., London, 1898-1900); id., *A History of Sumer and Akkad* (ib., 1910); Thureau-Dangin, *Die Sumerischen und Akkadischen Königsinschriften* (Leipzig, 1907); Ed. Meyer, *Geschichte des Altertums* (3d ed., Stuttgart, 1913).

HAMMURABI, CODE OF. On a block of black diorite, nearly 8 feet high, broken into three pieces, discovered by De Morgan on the acropolis of Susa in December, 1901, and January, 1902, the Law of Hammurabi is engraved. Under a bas-relief exhibiting the King receiving this code from Shamash, the sun god, there are 16 columns of text, four and one-half of which form the prologue. These are on the obverse, where there originally were five more columns. On the reverse there are 28 columns, the last five of which form the epilogue. The stone was probably brought to Susa by Shutruk-Nachunte in the twelfth century B.C. A fragment of another copy has subsequently been found at Susa; and other fragments have been found on tablets in Asurbanipal's library and in Babylonia. The code contains 282 paragraphs. These are in the main arranged under two heads, dealing respectively with property and person, each having three subheads, and each subhead still smaller divisions. It begins with directions concerning legal procedure, penalties for unjust accusations and false testimonies as well as for unjust judges, and decision by ordeal in the case of witchcraft. Then follow laws concerning property rights, duties and possession of soldiers and other landowners, loans, deposits, and debts, and a large number of paragraphs dealing with domestic property and family rights. After this come laws in reference to torts, where the *lex talionis* is literally applied, and penalties affixed in proportion to the social position of the injured. Cognizance is taken of injuries done by careless and unsuccessful operations by physicians, and damage occasioned by neglect in various trades. Fixed rates are determined for various forms of service, this rate legislation affecting most branches of trade and commerce. The law is throughout a civil code; there is no religious legislation. This is one of the most striking features of the code. The civil rights of priestesses and devotees are often mentioned, but there is no reference to their religious duties. The law reflects a somewhat advanced economic condition, and seeks to pro-

tect the weak, the poor, the widow, and the orphan against injustice from the rich and the powerful. Woman's position is relatively high, as is indicated by her right to own and dispose of property, her right to divorce her husband on grounds deemed sufficient, and the practical monogamy modified only by concubinage under definite restrictions that prevails. There is a curious mixture of barbarous punishments and humane regulations. An eye is gouged out for an eye that is destroyed, theft is punished with death, and a priestess who enters a saloon is thrown into the water; but the wronged wife has redress, the son cannot be disowned unless he repents the offense against his father, and the slave for debt must be released in the fourth year. No attempt is apparently made to go behind the overt act, to search for motives, or to consider the peculiarities of the individual case. But the law as a whole compares very favorably with the corresponding parts of the Mosaic codes, and is distinctly in advance of most codes in antiquity known to us. As it is many centuries older than the earliest of the Hebrew codes, according to any reckoning of their date, it has been suggested that the latter have been influenced by the former. Such an influence can scarcely have been direct; but the impact of Babylonian legal principles on the Amorites in Syria is quite probable, and the common law of Palestine, not less than the time-honored customs of the invaders, is likely to be reflected in Hebrew legislation. (See PENTATEUCH.) It is now known that Hammurapi was not the first to codify Babylonian law. Already the Sumerian ruler of Lagash, Urukagina, and others had long before his time written down collections of laws. How much in the code is due to Hammurapi's own conception of justice or to the principles prevailing among the Amorites of Babylonia, and how much only repeats earlier Sumerian or Akkadian enactments, cannot yet be determined. Consult: Scheil, *Mémoires de la délegation en Perse* (Paris, 1902), where the code was first published; R. F. Harper, *The Code of Hammurabi* (Chicago, 1904); Winckler, *Die Gesetze Hammurabis in Umschrift und Uebersetzung* (Leipzig, 1904); D. H. Müller, *Die Gesetze Hammurabis und die Mosaische Gesetzgebung* (Vienna, 1903); Johns, *Babylonian and Assyrian Laws, Contracts, and Letters* (Edinburgh, 1904); Kohler and Peiser, *Hammurabis Gesetze* (Leipzig, 1904); Ungnad, *Keilschrifttexte der Gesetze Hammurapis* (ib., 1909); id., in Grossmann, *Texte und Bilder* (Tübingen, 1909); Kohler and Ungnad, *Hammurabis Gesetze* (Leipzig, 1909-11); Joh. Jeremias, *Moses und Hammurabi* (2d ed., ib., 1903); Oettli, *Das Gesetz Hammurabis und die Thora Israels* (ib., 1903); Davies, *The Codes of Hammurabi and Moses* (Cincinnati, 1905); S. A. Cook, *The Laws of Moses and the Code of Hammurabi* (London, 1903); Lyon, "The Structure of the Hammurabi Code," in *Journal of the American Oriental Society*, vol. xxv (Boston, 1904); id., "The Consecrated Women of the Hammurabi Code," in *Studies in the History of Religions, Presented to Crawford Howell Toy* (New York, 1912); Rogers, *Uneiform Parallels to the Old Testament* (ib., 1912); Ed. Meyer, *Geschichte des Altertums* (3d ed., vols. i-ii, Stuttgart, 1913).

HAMON, a'môn', JEAN LOUIS (1821-74). A French genre painter. He was born at St. Loup, near Plouha, in northern Brittany, and was

educated for the priesthood, but his artistic temperament carried him to Paris, where he studied painting with Delaroche and Gleyre. He first exhibited the "Tomb of Christ" (Marseilles Museum) in the Salon of 1848. In 1849 he found employment in the porcelain manufactory at Sèvres, in which work he was very successful. His enameled casket, exhibited at the London Exposition of 1851, received a medal. His "Human Comedy" (1852, Louvre), and the celebrated "Ma sœur n'y est pas" (My Sister is not at Home) made his reputation; the latter was purchased by Napoleon III. In 1855 he received the ribbon of the Legion of Honor. In 1862 he went to Rome, and in 1865 established himself at Capri. The last years of his life were spent at St. Raphael (Provence), on the Mediterranean. Hamon belonged to the "Neo-grec" group of painters, whose art is the logical development of that of Ingres and Gleyre, and represents modern ideas in a classical garb. It is delicate and graceful in execution, but without real life. Consult La Fenestre, "Hamon," in *L'Art*, vol. ii (Paris, 1875).

HAMPDEN, hām'den, HENRY BOUVERIE WILLIAM BRAND, first VISCOUNT (1812-92). A British politician. Entering Parliament in 1852, he became a leader of the Liberal party, and from 1872 to 1884 was Speaker of the House of Commons. To overcome the Irish Nationalists' obstructionist tactics, in 1881 he refused further debate on Forster's Coercion Bill, and this led to the closure rule in parliamentary proceedings. In 1884 he was created Viscount Hampden and in 1890 became Baron Dacre.

HAMPDEN, JOHN (1594-1643). An English statesman. He was born in 1594, the eldest son of William Hampden, of Great Hampden, Buckinghamshire, and Elizabeth, daughter of Sir Henry Cromwell, of Hinchbrook, Huntingdonshire, aunt of Oliver Cromwell. In 1610 he was entered a gentleman commoner at Magdalen College, Oxford, and in 1613 was admitted to the Inner Temple, where he made considerable progress in the study of law. On Jan. 30, 1621, he first entered the House of Commons as a member for Grampound. He attached himself to the party of St. John, Selden, Coke, Pym, and those who opposed the arbitrary encroachments of the crown; but at first took no very forward part in public business and spoke but seldom. In the first three parliaments of Charles I he sat for Wendover. In 1627, for refusing to pay his proportion of the general loan which the King attempted to raise on his own authority, Hampden was imprisoned in Hampshire for nearly a year. His uncle, Sir Edmund Hampden, with whom he is sometimes confused, was one of the five knights who sued for liberty on a writ of habeas corpus in the famous Five Knights case. The prisoners were all set free when Charles found it necessary to summon his third Parliament. Hampden's industry in Parliament now rendered him one of its leading and most useful members; he was on most of its committees; but after the dissolution of the Parliament of 1628-29 he retired to his estate and devoted himself to study, and country sports and occupations. In 1634 Charles had recourse to the impost of ship money, claiming that it was not a tax, but a commutation for the military service, which every one owed. At first limited to London and the maritime towns, and levied only in time of war, it was in 1635 extended to inland counties in time of peace, when Hampden

resolutely refused to pay it, and his example was followed by nearly the whole county of Buckingham. In 1637 he was prosecuted before the Court of Exchequer for nonpayment, when a bare majority of the judges gave a verdict against him while the moral victory was clearly with Hampden. In the Short Parliament of 1640 Hampden took a prominent part in the great contest between the crown and the House of Commons. To the Long Parliament he was returned for both Wendover and the County of Buckingham, and made his election for the latter. For his resistance to the King's proceedings, he was one of the five members whom Charles, on Jan. 4, 1642, rashly attempted in person to seize in the House of Commons. On the breaking out of the Civil War he raised and became colonel of a regiment in the Parliamentary army under the Earl of Essex. He was also a member of the Committee of Public Safety. He was an excellent soldier, and constantly urged Essex to a more energetic conduct of the campaign. Some of his reputed victories over the Royalists, however, as at Aylesbury and Reading, are unhistorical. Prince Rupert having attacked a Parliamentary force at Chinnor, near Thame, Hampden joined a small body of cavalry that was rallied in haste to oppose him, and in the fight that ensued at Chalgrove Field received in the first charge a wound of which he died six days later, on June 24, 1643.

Consult: Anthony à Wood, *Athenæ Oxonienses*, vol. iii (Oxford, 1813-20); Clarendon's *History of the Rebellion* (6 vols., Oxford, 1838); Lord Nugent, *Memorials of John Hampden* (2 vols., London, 1832), with letters; Macaulay's essay on *Lord Nugent's Memorials of Hampden* (New York, 1861); John Forster, *Life*, in "Eminent English Statesmen," vol. iii (London, 1837); id., *Arrest of the Five Members* (London, 1860); id., *Debates on the Grand Remonstrance* (London, 1860); id., *Sir John Eliot* (2 vols., London, 1864); S. R. Gardiner, *History of England, 1603-42* (10 vols., London and New York, 1883-84); and his *Great Civil War* (4 vols., London and New York, 1893).

HAMPDEN, JOHN (c.1656-96). An English politician, grandson and namesake of the famous statesman. By 1679 he represented his native county, Buckingham, in Parliament, but made no great sensation there, and became known more as a partisan than as a debater, while his long sojourns in France developed free-thinking tendencies. On suspicion of being implicated in the Rye House Plot, he was imprisoned in the Tower (1683), tried and condemned to death, but saved himself by appealing to the King's mercy. He lost caste with his own party, and when it gained the ascendancy at the accession of William III Hampden did not receive the honors nor the position he expected. He was defeated when he ran for Parliament and, turning despondent, committed suicide.

HAMPDEN, RENN DICKSON (1793-1868). Bishop of Hereford. He was born in Barbados, March 29, 1793, and educated at Oxford, with a brilliant record in scholarship. He published *An Essay on the Philosophical Evidence of Christianity* (1827), and *Parochial Sermons Illustrative of the Importance of the Revelation of God in Jesus Christ* (1828). In 1829 he returned to Oxford and was tutor at Oriel (1832), after having twice acted as public examiner in classics. He was selected to preach the Bampton Lectures in 1832, when he chose for his subject *The*

Scholastic Philosophy Considered in its Relation to Christian Theology (London, 1833). He became the principal of St. Mary's Hall (1833), and professor of moral philosophy (1834), and in 1836 regius professor of divinity. The last appointment caused strong opposition because certain of his views placed the authority of the Scriptures higher than that of the Church. Later he published a *Lecture on Tradition* (1839; 5th ed., 1842) and a lecture on *The Thirty-nine Articles of the Church of England* (1842). In 1847 he was nominated to the see of Hereford, and only consecrated after bitter opposition on the part of the Tractarians, who were joined by Dr. Merewether, the dean of Hereford. He was not embittered by this opposition, but quietly pursued his life as bishop and scholar. He published *The Fathers of Greek Philosophy* (Edinburgh, 1862), the nucleus of which was articles he wrote for the eighth edition of the *Encyclopædia Britannica*. He died in London, April 23, 1868. Consult his life by his daughter (London, 1871).

HAMPDEN, RICHARD (1631-95). An English statesman. He was the second son of the famous John Hampden (q.v.), and at the age of 25 entered political life as member for Buckinghamshire. As an ardent supporter of Cromwell Hampden had a seat in Parliament until the end of the Protectorate, and afterward during a considerable part of the reigns of Charles II and James II. Inheriting the political principles and sterling character of his father, he resisted the Stuart encroachments upon popular rights, and his fear of the religious consequences led him to advocate earnestly the measure for excluding the Duke of York, afterward James II, from the throne. In the parliamentary deliberations in 1689, which ended in the call of William, Prince of Orange, to the British throne, Hampden bore an important part, and upon the establishment of the new dynasty was rewarded with responsible appointments. He was made Privy Councillor, Commissioner of the Treasury, and finally Chancellor of the Exchequer in 1690.

HAMPDEN SIDNEY. A community in Prince Edward Co., Va., 54 miles from Lynchburg, on the Buffalo River (Map: Virginia, F 4). It is the seat of the Hampden Sidney College, established in 1776, and is situated in an agricultural region, producing lettuce, tobacco, and grain. The water works and gas plant are owned by the college. Pop., 1914 (local est.), 400.

HAMPDEN SIDNEY COLLEGE. A college at Hampden Sidney, Va., founded in 1776 and chartered in 1783. It is under Presbyterian auspices, but is nonsectarian. It confers the following degrees: A.B., B.S., B.Litt., and A.M. The attendance averages 115. The college has buildings, grounds, and equipment valued at \$281,000, productive funds amounting to \$190,000, and an income of \$25,000. The library contains about 18,000 volumes. Among its early trustees were Patrick Henry and James Madison; among its presidents Rev. Samuel S. Smith, president of Princeton, Rev. John Blair Smith, first president of Union College, New York, and Rev. Archibald Alexander, founder of Princeton Theological Seminary; and among its alumni President William Henry Harrison and General Sterling Price. Extensive improvements have been made recently in buildings and equipment. The requirements for entrance and for graduation are those of the standard American colleges.

The president in 1914 was Rev. H. T. Graham, D.D.

HAMP/POLE, RICHARD ROLLE OF. See ROLLE, RICHARD.

HAMP/SHIRE, SOUTHAMPTON, or familiarly HANTS. A maritime county in the south of England, bounded on the west by Dorsetshire and Wiltshire, on the north by Berkshire, on the east by Surrey and Sussex, and on the south by the English Channel (Map: England, E 5). Area, including Isle of Wight, 1645 square miles. The surface is irregular, being traversed by the North and South Downs. The principal rivers are the Test, which is joined by the Anton, the Itchen, and the Avon. The climate of the country is in general mild and favorable to vegetation: the climate in the south of the Isle of Wight is milder than that of any other portion of Great Britain except southern Cornwall. Hops are cultivated, and the bacon cured here is famous. Vegetable gardening is an important pursuit. Southampton and Portsmouth, both termini of important railways, are the chief centres of trade, while Winchester is the capital. At Aldershot is the principal military training camp in Great Britain and headquarters of the First Army Corps. The New Forest is an extensive tract in the southwest of the county. Hampshire contains many interesting relics of the early ages of English history. Of these the chief is Portchester Castle on Portsmouth harbor. Pop. (including Isle of Wight), 1891, 692,055; 1901, 799,582; 1911, 950,579. Consult Shore, *History of Hampshire* (Southampton, 1892), and the *Victoria History of the Counties of England: Hampshire* (5 vols., London, 1912).

HAMP/STEAD, hām'stēd. A metropolitan borough in the County of London, England, 4 miles northwest of St. Paul's Cathedral (Map: London, D 6). The borough has an area of $3\frac{1}{2}$ square miles, over 15 per cent of which is devoted to the finest open public grounds of the metropolis. Hampstead is the seat of several benevolent and other metropolitan institutions, has one of the finest of London town halls, municipal electric lighting, baths, and public library. It is situated on a range of hills that reach their greatest altitude of 443 feet in Hampstead Heath, which commands extensive views. It was formerly a village celebrated for its mineral springs (which have now disappeared) as far back as the Roman period, and many valuable archaeological finds have been made here. From early times it has been a favorite residential section, with numerous elegant mansions and villas of Londoners. It has interesting artistic and literary associations with Pope, Addison, Gay, Steele, Johnson, Byron, Keats, Leigh Hunt, Joanna Baillie, Constable, Du Maurier, and others. Hampstead Heath, with an area of 240 acres, and Primrose Hill, on the southeast with 265 acres, acquired by the London County Council since 1870 as public grounds, are popular and greatly frequented resorts on Sundays and holidays, while on the August bank holiday more than 100,000 visitors are found each year on Hampstead Heath. Pop., 1901, 81,942; 1911, 85,510. Consult: Baines, *Records of Hampstead* (London, 1890); White, *Sweet Hampstead* (ib., 1901); A. Maxwell, *Hampstead: Its Historic Houses, its Literary and Artistic Associations* (ib., 1912); T. J. Barrett, *Annals of Hampstead* (3 vols., ib., 1912); *Hampstead Heath: Its Geology and*

Natural History, prepared by the Hampstead Scientific Society (ib., 1913).

HAMP/TON. A city and the county seat of Franklin Co., Iowa, 92 miles north of Des Moines, on the Chicago, Rock Island, and Pacific, the Minneapolis and St. Louis, and the Chicago Great Western railroads (Map: Iowa, D 2). It has a fine courthouse, a Carnegie library, and fine public parks. The city is the centre of an agricultural and stock-raising district and is an important market for horses. It contains a canning plant, foundry and machine shops, and nurseries. The water works are owned by the city. Pop., 1900, 2727; 1910, 2617.

HAMPTON. A city and the county seat of Elizabeth City Co., Va., on the north side of Hampton Roads, $2\frac{1}{2}$ miles northwest of Fortress Monroe and 16 miles north by west of Norfolk, with which it is connected by steam ferry on the Chesapeake and Ohio Railroad, and on several steamship lines (Map: Virginia, H 4). It is a popular resort, with good bathing facilities, and has considerable trade in agricultural produce, fish, oysters, clams, and crabs. The city is the seat of the Hampton Normal and Agricultural Institute, and has the church of St. John (Protestant Episcopal), built in 1660, Old Point Comfort College, an artillery school, a school for deaf and blind children (colored), the Huntington Library, a National Soldiers' Home, with 3500 inmates, and a National Cemetery where 3323 bodies are interred, 600 of unknown dead. The government is administered under a charter of 1910 by a mayor, elected every four years, and a council. Pop., 1900, 2764; 1910, 5505. Hampton was settled (before 1610) on the site of an old Indian village, Kecoughtan, and for many years was known by that name. It was one of the original boroughs represented in 1619 in the first Virginia Legislature. During the Revolution and the War of 1812 it suffered by fire at the hands of the English, and again in August, 1861, it was burned by a Confederate force under General Magruder.

HAMPTON, JOHN SOMERSET PAKINGTON, first BARON (1799-1880). An English statesman, born in Worcestershire. His father was William Russell, but he adopted his mother's name, Pakington, upon inheriting estates from her family. He received his education at Eton and at Oriel College, Oxford, but took no degrees. He entered Parliament in 1837 for Droitwich and continued to sit for the same constituency until 1874. In 1852 he was Colonial and War Secretary under Lord Derby, First Lord of the Admiralty in 1859, and was again appointed to the same position in 1866, when his party returned to power. He was War Secretary under Disraeli, and was made Baron in 1875. His parliamentary labors tended towards advancement in education and freedom in religion. From 1875 until his death he was Chief Civil Service Commissioner.

HAMPTON, WADE (1754-1835). An American soldier and planter, grandfather of Gen. Wade Hampton (1818-1902). He served with distinction under Marion and Sumter in the Revolutionary War, but, as McMaster says in his *History of the People of the United States* (vol. iv, p. 49), he "was another of that small class of officers who, after serving with credit in the War for Independence, fought with discredit in the War of 1812." Not only did he show no ability during the disastrous campaign in which he took part as major general in Wil-

kinson's army, but he helped to render abortive the projected invasion of Canada in 1813 by the enmity which he displayed towards his superior. The next year he resigned his commission and returned to South Carolina, where he became one of the wealthiest planters in the State. He was twice elected to Congress, once in 1794 and again in 1802.

HAMPTON, WADE (1818-1902). An American soldier and politician, the third of that name, born at Columbia, S. C., March 28, 1818, the son of one of the wealthiest planters in the South. He studied law at the University of South Carolina, but instead of practicing gave all his time to the management of his extensive estates. Although a Democrat, he belonged to the Union rather than the States' rights wing of the party—a fact which shut him out from political preferment in a State where radicalism was rife. When South Carolina seceded from the Union, he raised and equipped at his own expense the famous "Hampton Legion." At the head of these troops Hampton participated in the first battle of Bull Run and in the Peninsular campaign, was wounded at Fair Oaks, and soon afterward was commissioned brigadier general of cavalry. He took part in Lee's northward advance in 1863, was thrice wounded at Gettysburg, and was promoted major general on August 3 following. He was engaged in opposing the advance of Sheridan in the Shenandoah valley in 1864, and was in August of that year commissioned lieutenant general and placed in command of all Lee's cavalry. Later he commanded the cavalry in Johnston's army, which opposed Sherman's advance from Savannah in 1865. After the war he entered enthusiastically into the work of building up the South and reconciling its citizens to the outcome of the struggle. In 1876, having the confidence of the negroes, he succeeded in breaking the solid colored vote and was elected Governor, ending the "carpet-bag" rule. He was hailed as savior of his State. In 1878, by an accident with a shotgun, he lost a leg, and while he was lying at death's door was elected to the United States Senate. He was an advocate of moderate protection and sound money, and, with the rise of the Tillman faction and Populist principles, he retired from the Senate in 1891. From 1893 to 1897 he was United States Commissioner of Railroads, to which office he was appointed by President Cleveland. He was married twice—to Margaret, daughter of Francis Preston, and to a daughter of Governor McDuffie, of South Carolina. He died April 11, 1902. Consult E. L. Wells, *Hampton and Reconstruction* (Columbia, S. C., 1907).

HAMPTON COURT. An English royal palace, situated amid extensive pleasure grounds, on the north bank of the Thames, 1 mile from the village of Hampton and about 15 miles west-southwest of London (Map: London, G 4). It dates from 1515, when it was built for Cardinal Wolsey, who presented it to Henry VIII. The palace is built of red brick with stone facings and consists of three quadrangles, with some smaller courts. The great east and south fronts were built, from designs by Sir Christopher Wren, for William III. In the palace Edward VI was born, Queen Jane Seymour died, and Charles I was imprisoned. It was the occasional residence of Cromwell and was a favorite periodical residence of the sovereigns until the reign of George II. It contains 1000 rooms, 800

of which in suites are now occupied by needy persons of position in favor with the King. There is a famous picture gallery, with a valuable collection of old masters. The gardens cover 44 acres of land; one of the most notable features is the labyrinthine maze. The palace and grounds are opened daily to the public, free of charge, and constitute a popular holiday resort of the Londoners. Consult: E. Law, *Hampton Court in Tudor, Stuart, Orange, and Guelph Times* (3 vols., London, 1885-91); id., *A Short History of Hampton Court* (2d ed., ib., 1906); C. Jerrold, *Fair Ladies of Hampton Court* (Boston, 1911); W. C. Jerrold, *Hampton Court* (ib., 1913).

HAMPTON COURT CONFERENCE. A conference at Hampton Court, shortly after the accession of James I to the throne of England, for the discussion of religious differences. The King presided, and was supported by Archbishop Whitgift, with eight bishops, five deans, and two other clergymen. The Puritan party, whose demands were under consideration, were represented by John Reynolds, dean of Lincoln, and three other eminent clergymen of moderate views. These demands had been presented to the King in the previous year in what is known as the Millenary Petition, because it was intended to be signed by 1000 Puritan clergymen, though in fact it seems not to have been done, about 750 clergymen having probably signified their adherence by letter. It disclaimed schism and, unlike former demands of the Puritan party, carefully refrained from attacking episcopacy, restricting its prayers to a purification of the ritual and the encouragement of preaching as an essential part of the service, together with greater latitude of belief for those clergymen who objected to subscribing to the whole of the Prayer Book; and, lastly, to the reform of a few enumerated abuses, principally in matters of discipline.

There were three sessions of the conference—on January 14, 16, and 18, 1604. The petitioners were admitted to the second, in which James preserved for a time an appearance of impartiality, interrupting, however, to say, "It is my aphorism, no bishop, no king," and becoming more and more inflamed by the discussion, he put a stop to it with the declaration: "If you aim at a Scottish presbytery, it agreeth as well with monarchy as God and the devil. . . . If this be all that they have to say, I shall make them conform themselves, or I will harry them out of the land, or else do worse." On the third day the King's decision, save for a few points entirely adverse to the petitioners, was announced in indecorously harsh language. This marks the beginning of the close connection between the bishops and the house of Stuart and the alienation of the Puritan party.

The Millenary Petition is printed in Prothero, *Statutes and Constitutional Documents, 1559-1625*, p. 413 (Oxford, 1894), together with a few documents bearing upon the conference. The Petition and James's proclamation for the use of the Prayer Book are also to be found in Gee and Hardy, *Documents Illustrative of English Church History* (London, 1896). Consult also Gardiner, *History of England, 1603-42*, vol. i (New York, 1883-84).

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institution for the education of negroes and Indians, situated on a plantation of 170 acres on the Hampton River,

Va., 2 miles from Old Point Comfort. The school was opened in 1868 under the auspices of the American Missionary Association, with Gen. S. C. Armstrong in charge. In 1870 it received a charter from the State. It is a private corporation, administered by a board of 17 trustees of different denominations. The school owns over 1000 acres of land, with 140 buildings, including, besides dormitories and recitation halls, a library with 37,000 volumes, a church, a hospital, gymnasium, a well-equipped trade school, and a large building for domestic science and agriculture. The instruction comprises academic, trade, agricultural, domestic science, and normal courses. The Armstrong and Slater Memorial Trade School, opened in 1896, gives training in the theory and practice of carpentry, painting, blacksmithing, tailoring, and other handicrafts. The girls are instructed in housework, laundry work, cooking, sewing, upholstery, and other home and farm occupations. A farm, with barn and stock, greenhouses, and experiment station, furnishes work and instruction for agricultural students. Five miles from the school is another farm of about 600 acres, largely for stock, also worked by students. The expenses of tuition are met by contributions; but in pursuance of the school's policy to foster independence in the students, those who are unable to pay their board are required to make a return in labor. The young men are under military discipline and are organized in a battalion of six companies. The school publishes a monthly paper, the *Southern Workman*, devoted to matters relating to the two races and printed, as is all other school literature, by the students' printing department. In 1914 the school had 135 instructors and an attendance of 1309, of whom about 38 were Indians. The day school is closed from June to October, but the industrial departments continue through the summer. A normal institute is carried on during four weeks in the summer for the colored teachers of the South. Between 400 and 500 attend. The institute has graduated over 1800 students, of whom by far the greater number of those living are engaged in teaching. At least 9000 undergraduates have gone out from the school. Many former students of both races are successful farmers or engaged at their trades or in various business enterprises, while a limited number have fitted themselves for professional careers. The most noted graduate is Booker T. Washington (q.v.), of the class of 1875. The endowment of Hampton is about \$2,700,000, and the annual income of about \$300,000 is received from endowments, from the State land scrip and agricultural funds, the Slater fund, the General Education Board, from churches, Sunday schools, and from private benefactions. The president in 1914 was Rev. H. B. Frissell, D.D. Consult H. B. Frissell, "Hampton Institute," in *From Servitude to Service* (Boston, 1905).

HAMPTON ROADS. The lower part of the estuary of the James River, Va., where it falls into Chesapeake Bay. It is an important military point and is defended by Fort Wool and Fortress Monroe. Its channel is broad and deep, and the harbors along its shores, especially that of Norfolk, are excellent. This fact, together with the number of railroad lines which terminate at Norfolk and other points on its shores, gives it a considerable commercial importance. During the Civil War there were two

naval engagements in and near Hampton Roads. On March 8, 1862, the frigate *Congress*, the sloop of war *Cumberland*, the steam frigates *Minnesota* and *Roanoke*, and the ship *St. Lawrence* were in the roadstead, when the *Virginia*, an ironclad Confederate craft, formerly the United States steam frigate *Merrimac*, which had been seized the year before, attended by two small steamers, came from Norfolk, passed rapidly by the *Congress*, exchanging broadsides, and ran directly into the *Cumberland*, which sank in less than three-quarters of an hour. The *Congress* was disabled and set on fire, and eight hours later her magazine exploded. The other Union vessels escaped. The Union loss was 286; that of the Confederates only about a dozen. On the following day the famous contest occurred in the Roads between the Federal *Monitor* and the *Virginia*. See *MONITOR*.

HAMPTON ROADS CONFERENCE. In American history, an informal conference, with reference to the arrangement of a peace between the North and South, held on a vessel, the *River Queen*, near Fort Monroe, Feb. 3, 1865, towards the close of the Civil War, between President Lincoln and Secretary of State Seward, representing the United States government, and Vice President Alexander H. Stephens, Senator Robert M. T. Hunter, and Assistant Secretary of War John A. Campbell, representing the Confederate States. The conference was brought about primarily by Francis P. Blair (q.v.), who conceived that the war might be closed and the two sections of the country reunited by arranging for joint action on the part of the Federal and Confederate armies against Maximilian in Mexico, with a view to the enforcement of the Monroe Doctrine and the possible absorption of Mexico by the United States, the Southern States to agree, however, to the complete abolition of slavery within their boundaries. President Lincoln refused to consent to such a conference except on the basis of union, and the Southern commissioners somewhat equivocally acceded to his terms. During the conference, which lasted for four hours, President Lincoln expressed himself in favor of the admission of the Southern States, after their surrender, to immediate representation in Congress, and stated that in regard to the confiscation acts he should "exercise the power of the executive with the utmost liberality," but that he would never modify to the slightest extent the Emancipation Proclamation, though "if the war should then cease, with the voluntary abolition of slavery by the States," he should, personally, favor the payment by the Federal government of a fair indemnity to the former slave owners. He disapproved, however, of the project for a joint attack upon the French in Mexico, and refused to consent to any treaty with the Confederate government as such, or to consider any proposition for peace which did not provide for the complete restoration of the Union. The conference broke up without any agreement having been reached, and the Confederate commissioners immediately returned to Richmond. Consult: Nicolay and Hay, *Abraham Lincoln: A History*, vol. x (New York, 1890); A. H. Stephens, *The War between the States*, vol. ii (Philadelphia, c.1868-70); Davis, *Rise and Fall of the Confederate Government*, vol. ii (New York, 1881).

HAM/STER (Ger., from OHG. *hamster*, weevil; possibly borrowed from Lith. *staras*,

hamster). A burrowing gregarious rodent of the Old World, representing a subfamily (Cricetinae) of the mice (Muridae) and having the troublesome habits of the North American gophers. The group is characterized by the tuberculous crowns of the molar teeth, by the extensive cheek pouches, and by the short, hairy tail. The hamster (*Cricetus vulgaris*, or *cricetus*) is a native of the north of Europe and of Asia and is abundant in many parts of Germany and Poland, but rare west of the Rhine. It is of variable color, usually reddish gray above, the belly black, the feet white, and large white spots on the sides, throat, and breast. It is larger and of stouter form than the common rat, with the tail only about 3 inches long. It burrows in dry soils, each individual making a burrow for itself, to which there are more entrances than one, and which also contains several holes or compartments, one of them lined with straw or hay, in which the animal sleeps. Some of the chambers are capacious enough for the storing of large quantities of seeds or other provisions, even to the amount of 60 or 100 pounds of grain or beans, which the animal carries thither in its cheek pouches, and on which it feeds during the milder parts of winter, spending the most severe part of that season in a state of torpid hibernation. It is a great pest to the farmers and the object of their unceasing hostility; but it is very prolific and produces two or three broods in the year, 16 to 18 at a birth. This leads occasionally to their appearing in countless swarms, overrunning the fields in migrating hordes which form a devastating plague until gathering enemies and disease kill them off. The hamster feeds generally on vegetable food, as leaves, seeds, and the like, and is said also to devour small quadrupeds, birds, frogs, etc. It is a fierce and pugnacious animal and exhibits more than the pertinacity of the bulldog. The skins of hamsters are of some value. As at present understood, the genus *Cricetus* contains a single species divided into a number of subspecies. The two other genera in the subfamily are both African.

HAMSUN, hām'sun, KNUT (1860-1920). A Norwegian author, born in Lom, Gudbrandsdal. He was the son of a tailor, was brought up by an uncle in one of the Lofoten Islands, became a cobbler's apprentice, and at 18 wrote and had printed a poem, *Et gjensyn*, and a novel, *Björger*. He ambitiously entered the University of Christiania, but was ill prepared and could not finish his course. Hoping to become a Unitarian minister, he went to America, and tried various employments, occasionally lecturing on French literature in Minneapolis. He went back to Christiania and attempted authorship without success. But after three years on a Newfoundland fishing boat, he wrote for a Danish periodical his novel fragment *Sult* (1888), which portrayed the cravings of a young man, and which at once secured him a place in the front rank of the young authors of the North. After a brilliant and none too kind criticism of America, *Fra det moderne Amerikas aandsliv* (1889), and after having enlarged and issued *Sult* in book form (1890), he returned to the theme of loneliness in *Mysterier* (1892). *Redaktør Lynge* and *Ny jord* (both 1893) were political and radical—Hamsun was a member of the extreme Norwegian Left. His radical lectures on prominent men followed

(1891-92). His first love story was *Pan* (1894), one of his best books. A dramatic trilogy—*Ved rigets port* (1895), *Livets spil* (1896), *Aftenrøde* (1898): a drama in rhymed verse, *Munken Vendt* (1902), the story of a false priest; and the play *Dronning Tamara* (1903), on the theme of criminal love, showed his ability as a dramatist, as did *Siesta* (1897) in the field of the humorous short story, *Viktoria* (1898), probably his greatest novel, in longer fiction, *I eventyrland* (1903) in writing imaginative travels, and *Det vilde kor* (1904) in lyric verse, which contains his splendid poem to Björnson at To. Among his later works are the novels *Svarmere* (1904), *Under høststjernen* (1906), *Benoni* (1908), *Rosa* (1908), a story of the far north, *Den sidste glæde* (1912), and *Børn av tiden* (1913). His poverty-stricken and joyless childhood and youth he has described in "Oplevelser" (*Norsk Familiejournal*, 1898). He sharply attacks what he thinks are the failings of modern Norway and does it in a witty, wonderfully clear style. His works have been translated into 17 languages. There are German versions of most of his books, published at Munich by the Langen-Verlag; Russian versions of many; Finnish and Bohemian of some; and in English *Hunger* (1899; from *Sult*, 1890), and *Shallow Soil* (1914; from *Ny jord*, 1893), a satiric description of the superficiality of life in a cosmopolitan city. His *Samlæde romaner og fortællinger* are published in 12 vols. (Christiania, 1907-10). Consult the preface by Hyllested to *Shallow Soil* (New York, 1914), and Hyllested, "Knut Hamsun: An Appreciation," in the *American-Scandinavian Review* (New York, March, 1914).

HAMTRAMCK, hām-trām'k. A village in Wayne Co., Mich., 5 miles northeast of Detroit. It has manufactures of wheels, iron and aluminum castings, automobile accessories, radiators, white lead and colors, brass goods, etc. There are also some truck-growing and general farming interests. Pop., 1910, 3559; 1920, 48,615.

HAMY, a'mē, THEODORE JULES ERNEST (1842-1908). A French anthropologist, born at Boulogne-sur-Mer, France. He studied medicine at Paris, received his diploma in 1868, and served as assistant naturalist, and after 1892 as anthropologist, at the Museum of Natural History. From 1890 until his death he was director of the Museum of Ethnography in the Trocadéro. He became an officer in the Legion of Honor in 1889 and a member of the Academy of Inscriptions in 1890. His publications comprise: *Précis de paléontologie humaine* (1870); *Crania ethnica* (1875-82), with Professor De Quatrefages; *Anthropologie du Mexique* (1884); *Decades Americanae* (1896-99); *Origines du Musée d'Ethnographie* (1890); *Galerie américaine du Musée d'Ethnographie du Trocadéro* (1897); *Etudes historiques et géographiques* (1896); *Aimie Bonpland, médecin et naturaliste* (1900).

HAN, hān. A Chinese dynasty. It was founded by one Liu-pang, a soldier of fortune (born 247 B.C., died 195 B.C.), who rebelled, took to soldiering, became Duke of P'ei, later Prince of Han, and after much fighting and many adventures became the acknowledged Emperor of the country and mounted the throne about 206 B.C. The capital was at Changan (now Sianfu in Shensi); but later, in the reign of the fifteenth Emperor (25 A.D.), it was changed to Loyang in Honan. Hence the

division of the dynasty into Western, or Former, and Eastern, or Later, Han. It came to an end in 220 A.D., when the Empire became divided into "Three Kingdoms," one of which is known as the Minor Han (221-264 A.D.). In all 14 emperors ruled during the Former Han, 12 during the Later, and 2 during the Minor Han.

One of the first acts of Kao-ti, its founder, was to abolish the tyrannical laws of his predecessors and to establish a new code characterized by moderation and justice, and in the reign of his successors literature began to revive. In 91 B.C. appeared the first general history of the country, from the pen of Ssi-ma Ts'ien, the Herodotus of China, whose works covered the period from 2697 to 104 B.C. In 100 A.D. appeared the great dictionary of Hsi Shen, in which all the words in Chinese literature—about 10,000 in all—are defined and explained. Early in the dynasty the Jews entered China and established a colony in Honan (see KAI-FENG), and about 120 B.C., through the expedition of the Chinese general Chang-kien to the far west, communication between China and the countries of western Asia began to create a new epoch in Chinese civilization. In 67 A.D. Buddhism entered China under Imperial auspices, and Taoism, under the influence of the new cult, began to take on its present forms. The practice of burying slaves with the dead was abolished and clay figures used instead. Though not without internal troubles at times, and a usurpation that threatened the continuity of succession, the Han period was one of increasing prosperity and advancing civilization and culture. Consult: Williams, *Middle Kingdom* (New York, 1883); Giles, *Historic China* (London, 1882); F. Hirth, *Ancient History of China* (New York, 1908). See CHINA, *History*.

HANAFORD, PUEBE ANN (COFFIN) (1820-). A Universalist minister and author, born on the island of Nantucket. She was brought up a Quaker. She was married in 1849; became a minister in 1868 (the first woman minister ordained in New England); preached with success; and on several occasions performed the duties of chaplain to the Legislature of Connecticut. She was conspicuous in temperance work. Her varied writings include *lives of Abraham Lincoln* (1865), of *George Peabody* (1870), and of *Charles Dickens* (1870); *Leonette, or Truth Sought and Found* (1857); *The Soldier's Daughter* (1860); *The Young Captain* (1868); *From Shore to Shore, and Other Poems* (1870); *Women of the Century* (1877); *The Ordination Book* (1887).

HANAU, hā'noū. The capital of a district in Hesse-Nassau, Prussia, situated at the junction of the Kinzig with the Main, 12 miles east of Frankfurt (Map: Germany, C 3). The newer, or industrial, portion of Hanau was founded in 1597 by Walloons and Protestants from the Netherlands. The most notable buildings are the castle, formerly the residence of the counts of Hesse-Philippsthal, situated in a large park (it is now owned by the city); the old church of St. Mary, mentioned at the beginning of the fourteenth century; the seventeenth-century church of St. John; the two ancient town halls, dating from the fifteenth and sixteenth centuries respectively; the seventeenth-century town hall, the theatre, and the house formerly occupied by the brothers Grimm, natives of Hanau. Hanau is an important industrial cen-

tre and is noted for its gold and silver ware and jewelry, the cutting and setting of precious gems. There are also manufactures of tobacco, cigars, platinum, aluminium, leatherware, chocolate, lithographed work, spices, gloves, carpets, paper, knit ware, machinery, and chemicals. Hanau has, near by, one of the largest powder factories in the world. There is a considerable trade in local manufactures, agricultural products, wine, and spirits. The town possesses canal communication and is well equipped with a Gymnasium, a mathematical academy, a natural history and historical society. In the vicinity are situated the fine palace of Philippsruhe and the bathing resort of Wilhelmsbad, with its iron springs. Pop., 1900, 20,846; 1910, 37,472, mostly Protestants.

Hanau is believed to have had its origin in a Roman settlement. It became a city early in the fourteenth century and was fortified in 1528. During the Thirty Years' War it was occupied repeatedly by the Swedes and the Imperial troops, and it was the scene of the last battle fought by Napoleon on German soil, at Rückingen. This conflict, which took place on the 30th and 31st of October, 1813, resulted in the severe defeat of the allied armies under Wrede.

HANBURY, BENJAMIN (1778-1864). An English Nonconformist historian, born at Wolverhampton. He was employed in the Bank of England from 1803 to 1850. He devoted himself to collecting documents bearing on all Nonconformist matters and took the most lively interest in the promotion of the cause. His works include: *An Historical Research Concerning the Most Ancient Congregational Church in England* . . . (1820); *Historical Memorials Relating to the Independents* . . . (1839-44); *A Life of Calvin* (1831).

HANCOCK. A village in Houghton Co., Mich., opposite Houghton, on Lake Portage and on the Copper Range and the Mineral Range railroads (Map: Michigan, A 1). A ship canal to Lake Superior affords transportation facilities also by water. Hancock is in the centre of the Lake Superior copper region, and besides several highly productive copper mines has smelting works, foundries and machine shops, and other industrial establishments. Montezuma Park, a Finnish college, and Kerredge Theatre are among the features of the village. Settled in 1850, it was incorporated as a fourth-class city in 1903. The government is vested in a mayor and board of aldermen and a village council, elected on a general ticket. The water works are owned and operated by the municipality. Pop., 1900, 4050; 1910, 8981; 1914 (U. S. est.), 11,081.

HANCOCK, JOHN (1737-93). An American patriot of the Revolutionary period, president of the Continental Congress, a signer of the Declaration of Independence, and the first Governor of the State of Massachusetts. He was born at Braintree, Mass., Jan. 23, 1737, graduated at Harvard in 1754, and was adopted by an uncle, Thomas Hancock, who in 1764 left him a fortune of about £80,000, and to whose large mercantile business he succeeded. After his graduation he spent some time in England. He was for several years one of the selectmen of Boston, and after 1766 was repeatedly elected to the Massachusetts General Court, where he steadily resisted the encroachments of the British ministry. After the "Boston Massacre" (q.v.), in 1770, Hancock was a member of the

committee which was appointed by the people of Boston to demand of Governor Hutchinson the removal of the British troops from Boston, and on the fourth anniversary of the "massacre" he delivered the customary commemorative oration, and by his boldness and eloquence attracted attention to himself anew as one of the leaders of the Patriot, or Whig, party. In June, 1774, he was appointed by the General Court, of which he was a member, one of the representatives of Massachusetts in the first Continental Congress, and in October he was appointed chairman (later President) of the first Provincial Congress of Massachusetts, which adjourned on December 10. He was likewise President of the second Provincial Congress, which assembled at Cambridge in February of the following year, and by his activity in this and other extra-legal proceedings incurred, with Samuel Adams, the bitter hostility of Governor Gage, whose expedition to Lexington and Concord on April 18-19 (see LEXINGTON) was sent out in part to secure the capture of these two leaders, and who, when issuing his proclamation of pardon on June 12, expressly excepted Hancock and Adams, "whose offenses," he said, "are of too flagitious a nature to admit of any other consideration than that of condign punishment." In defiance of the known hostility towards Hancock of the British ministry, and partly, no doubt, with a view to winning over members of the wealthier and more aristocratic families in New England, who as a class were inclined to conservatism and were disposed to remain loyal to the home government, Hancock was elected President of the Continental Congress in May, 1775. Though he resigned this position in October, 1777, he remained a member of the Congress until 1780, and served again in that body in 1785-86. In 1778, as major general of Massachusetts militia, he commanded the State troops in the Rhode Island expedition. In 1780 he was a member of the Constitutional Convention of Massachusetts, and upon the adoption of the constitution there framed was elected first Governor of the State, in which position he was retained by annual re-elections until 1785. After an intermission of two years he was again Governor from 1787 until his death. Though at first thought to be opposed to the Federal Constitution as drawn up by the convention at Philadelphia in 1787, he presided over the Massachusetts convention which ratified that document in 1788 and used his influence to win over those who favored rejection. Concerning Hancock's character and the extent of his influence there has been much difference of opinion among historical writers; but he is now generally considered to have been a man of undoubted patriotism and of considerable ability, whose usefulness at times was impaired by his vanity and his jealous disposition. There is no adequate biography of Hancock, but considerable material bearing upon his life may be found in Abraham E. Brown, *John Hancock, his Book* (Boston, 1898). Consult also L. Sears, *John Hancock, the Picturesque Patriot* (ib., 1912).

HANCOCK, WINFIELD SCOTT (1824-86). A distinguished American soldier, born Feb. 14, 1824, at Montgomery Square, Montgomery Co., Pa. He graduated at West Point, June 30, 1844, number 18 in a class of 25, and was assigned, July 1, 1844, as a brevet second lieutenant to the Sixth Infantry, with which he served for two years in the Indian country. He was

appointed second lieutenant in the same regiment in June, 1846. In the Mexican War he commanded a company at the National Bridge (Aug. 12, 1847) and subsequently earned the brevet of first lieutenant for services at Contreras and Churubusco. From 1848 to 1855 he served successively as regimental adjutant and quartermaster and for a short time as assistant adjutant general, Department of the West. Having shown great aptitude in all staff details, he was appointed captain and assistant quartermaster in November, 1855, and was assigned to duty in Florida. He accompanied General Harney to Kansas, serving during the border troubles there, and in 1855 was ordered to proceed to Utah, arriving at Fort Bridger with his wagon train after a march of 700 miles in 26 days. At this point he found his old regiment under orders to march overland to California. He was directed to accompany it, in charge of the transportation. Organizing and equipping a train of 128 wagons from inferior materials, he conducted it safely over a rough trail of 1100 miles to its destination, at Benicia. From May, 1859, to August, 1861, he was chief quartermaster on the Pacific coast, with headquarters at Los Angeles.

At the outbreak of the Civil War Captain Hancock was among the first to be appointed to the grade of brigadier general of United States Volunteers, his commission being dated Sept. 23, 1861. Assigned to command a brigade in Smith's Division, Fourth Corps, Army of the Potomac, he first led it in action at Williamsburg, Va. (May 5, 1862), where he earned the mention, in General McClellan's dispatches, that "Hancock was superb." At Antietam, upon the death of General Richardson, he was placed in command of the First Division, Second Corps. In November, 1862, he was promoted to be major general of United States Volunteers. At Fredericksburg, Va., Dec. 13, 1862, his new command suffered a loss of 40 per cent, including 150 officers killed and wounded. The battle of Chancellorsville (May 2-4, 1863) was to a great extent prevented from becoming a total rout of the Federal forces by the steadiness of Hancock's Division. Soon afterward the command of the Second Corps was given to him. On the morning of July 1, 1863, the advance of Lee's army, having encountered the left wing of the Army of the Potomac in front of Gettysburg, was steadily pressing it back, with the loss of its commander, Reynolds. General Meade ordered Hancock to proceed to the battlefield, assume command there, and virtually to decide at his discretion whether the Army of the Potomac should meet the Army of Northern Virginia at that time and place. Hancock arrived on the field at 3.30 p.m., to find the Confederates massing their forces for a farther advance while confronted by the depleted lines of the Federal army. He quickly infused confidence among the troops, reformed the Federal lines, and in various ways so strengthened his position as to deter General Lee from making his contemplated attack. On the following day, during the nearly successful attempt of Lee to turn the flanks of the Federal army, Hancock was placed in command of the left wing, and, by judicious handling of his men and gallant personal effort, stemmed the tide of battle. On the third day a Confederate charge was directed against Hancock's command, the Federal centre, and succeeded in penetrating the first line, but

was finally repulsed. Each side suffered terrible losses, and Hancock received a wound from which he never entirely recovered. In March, 1864, he resumed command of his corps, which, in the reorganization of the army under Grant, was reinforced by the transfer of two divisions from the Third Corps, making an aggregate strength of 43,055. Hancock was distinguished by the energy, good judgment, and tactical skill displayed in the Wilderness campaign. The unfortunate engagements in front of Petersburg and at Ream's Station were the first occasions in which his command met with reverses. On Aug. 12, 1864, he was promoted to be brigadier general in the regular army, and in November he was placed in command of the Middle Military Division. He received his commission as major general in the regular army on July 26, 1866. He was then sent to command the Department of Missouri, with headquarters at Fort Leavenworth, and during the year 1867 personally led an expedition against the Indians. In August of that year he was sent to New Orleans to supervise the rehabilitation of the States of Louisiana and Texas. In a general order he defined his duty, stating that "crimes and offenses committed in this district must be left to the consideration and judgment of the regular civil tribunals," but added that "armed insurrection or forcible resistance to the law will be instantly suppressed by arms." His conservative course not meeting with that support of the Washington authorities which he expected, he was at his own request relieved, and assigned to command the Military Division of the Atlantic, with headquarters at Governor's Island, where he remained until March, 1869, when he assumed charge of the Department of Dakota. In 1872 he was reassigned to the Division of the Atlantic. While acting in this capacity, General Hancock was in 1880 made the Democratic nominee for President of the United States, but was defeated by his Republican opponent, Garfield. General Hancock died at Governor's Island, after a brief illness, on Feb. 9, 1886. In 1850 he married Miss Almira Russell, of St. Louis, by whom he had two children. Consult: Walker, *General Hancock* (New York, 1894), in the "Great Commander Series," and id., *History of the Second Army Corps* (ib., 1886).

HANCOCK HOUSE. The former residence in Boston of Gov. John Hancock. It was erected in 1737 and taken down in 1863.

HAND (AS., Icel. *hond*, Goth. *handus*, OIIG. *hant*, Ger. *Hand*; perhaps connected with Goth. *hinnan*, AS. *hentan*, to seize). The terminal portion of the superior limb of man. It is almost invariably distinguished by name from the same organ in other vertebrate animals; but actually there is little essential difference, and it is legitimate and proper, therefore, to speak of the terminal part of the fore limb of any quadruped as the hand, or *manus*, in distinction from the foot, or *pes*. We will first consider the human hand, and afterward its homologue in the lower animals.

"That," says Cuvier, "which constitutes the *hand*, properly so called, is the faculty of opposing the thumb to the other fingers, so as to seize upon the most minute objects—a faculty which is carried to its highest degree of perfection in man, in whom the whole anterior extremity is free, and can be employed in prehension." The peculiar prehensile power of the

human hand is chiefly dependent upon the length, power, and mobility of the thumb, which can be brought into exact opposition to the extremities of all the fingers, whether separately or grouped together. The general arrangement of the bones of the arm is similar to that of the leg. The *humerus*, or arm bone, corresponds to the *femur*, or thigh bone; the lower end of the humerus is connected with the two bones of the forearm, the *radius* and the *ulna*, which correspond with the two bones of the leg. Then come the *carpal* bones, the *metacarpal* bones, and the *phalanges*, corresponding to the *tarsal* bones, *metatarsal* bones, and *phalanges* in the foot. The diagram shows the way in which the bones of the hand are arranged. The carpal bones are eight in number and are arranged in the wrist in two rows. The first, or upper, row consists

LEFT HAND (dorsal surface).

ra., radius; ul., ulna; sca., scaphoid; semi., semilunar; pis., pisiform; cunei., cuneiform; trapez., trapezoid; mag., magnus; unc., unciform; metc., metacarpal; f.pha., first phalanx; s.pha., second phalanx; t.pha., third phalanx.

practically of three bones, the scaphoid, semilunar, and unciform, the fourth, the pisiform, being regarded as belonging to the class of *saccharoid* bones (q.v.), and the second row of four bones, trapezium, trapezoid, os magnum, and unciform; so that, excluding the pisiform bone, the carpal and the tarsal bones correspond in number. As we commonly term the palm the *front* of the hand, the thumb becomes conventionally the *outer*, and the little finger the *inner* digit; but according to the rules of comparative anatomy, and in order to compare the hand and foot, we ought to reverse these terms. The outer of the carpal bones of the first row supports the bones of the thumb and forefinger and constitutes with them the *outer* division of the hand. The inner of the carpal bones bears the little and the next (the ring) finger and constitutes with them the *inner* division of the hand; while the middle one bears the middle finger and belongs to the *middle* division of the

hand. The two outer bones are connected with the radius, while the inner bone is connected (indirectly by a thick ligament) with the ulna.

Collectively the carpal bones are so arranged that the carpus presents a dorsal convex surface, upon which the tendons of the extensor muscles of the fingers play, and a palmar concave surface, on which the tendons of the flexor muscles lie. The several bones are joined to one another—each bone being united to three or more others—by a large extent of surface and are girded together by strong ligamentous bands. The wrist is thus as strong as if it had been constructed of one solid piece of bone, while the slight gliding movements which occur between the several bones give it an elasticity which serves to break the shocks that result from falls upon the hand. The uppermost surface of the first row of carpal bones is convex, and this convex surface is received into a wide cup, or socket, formed by the lower articular surface of the radius, and by a ligament passing from that bone to the ulna. The metacarpal bones and the phalanges require no special description. Like the great toe, the thumb has only two phalanges, while each of the other digits has three.

The various movements of which the hand is capable may be divided into (1) the different directions in which the hand collectively can be moved, and (2) the movements of which the hand itself, without reference to the arm, is capable. The *scapula*, or shoulder blade, with which the principal arm bone articulates, is itself movable to a very considerable extent on the surface of the ribs on which it rests. Again, the socket in which the nearly spherical head of the *humerus*, or arm bone, lies is very shallow—not unlike the cup in the well-known toy *cup-and-ball*—and the arrangements of the shoulder joint generally are such as to permit so great a variety and so extensive a range of movements that we are able to apply the hand to every part of the body. This freedom of motion is due in a great degree to the clavicles, or collar bones, which, by steadying the shoulder blades and keeping the shoulders apart, afford a fixed point for the various muscles which we employ in raising the arms, in folding them over the chest, in the act of hugging, etc. The movement at the next junction of bones, the elbow joint, is very different from that at the shoulder. The latter is termed, from its construction, a ball-and-socket joint and admits of motion in all directions within definite limits; while the elbow is a hinge joint and merely admits of bending and straightening, or, in other words, of motion in one plane. We have next to consider a class of movements of the forearm and hand, to which there is nothing precisely analogous in the leg. The movements in question are called pronation and supination. In *pronation* (from Latin *pronus*, with the face downward), we turn the palm of the hand downward, as in picking up any substance from the table; in *supination* (from Latin *supinus*, with the face upward), we turn the palm upward, as for the purpose of receiving anything that may be placed in it.

These movements of pronation and supination are exceedingly important to the usefulness of the hand and are chiefly effected by three muscles. One of these muscles passes from a projecting process on the inner side of the humerus, at its lower end, to the outer edge of the middle of the radius. Its contraction causes the radius

to roll over, or in front of, the ulna. It thus pronates the hand and is called a *pronator* muscle. Another muscle passes from a projecting process on the other side of the arm bone to the inner edge of the radius near its upper part. It runs therefore in an opposite direction to the former muscle and produces an opposite effect, rolling the radius and the hand back into the position of supination. Hence it is called a *supinator* muscle. The third is a very powerful muscle, termed the *biceps* (q.v.), which not only bends the elbow, but, from the mode in which its tendon is inserted into the inner side of the radius, “also rotates the radius so as to supinate the hand; and it gives great power to that movement. When we turn a screw, or drive a gimlet, or draw a cork, we always employ the *supinating* movement of the hand for the purpose; and all screws, gimlets, and implements of the like kind are made to turn in a manner suited to that movement of the right hand, because mechanics have observed that we have more power to supinate the hand than to pronate it.” Supination can only be performed to its full extent by man, and even in man it is not the natural or habitual position; monkeys can partially effect the movement, and in most of the lower animals the part corresponding anatomically to the hand is constantly in a state of pronation.

The movements of which the hand itself, without reference to the arm, is capable, are very numerous, and in this respect differ considerably from the corresponding movements of the foot. Thus, we can bend the fingers down upon the palm, or we can extend them beyond the straight line; we can separate them from one another to a considerable extent, and we can close them with considerable force. The wrist and hand are bent forward or flexed upon the forearm by three muscles, which pass downward from the inner condyle, or expanded end of the humerus, and are termed the *radial flexor*, the *ulnar flexor*, and the *long palmar* muscles. The first two of these muscles are inserted into wrist bones on the radial and ulnar sides respectively, while the third expands into a fanlike *fascia*, or membrane, in the palm of the hand, and thus serves both to support the skin of the palm and to protect the nerves and vessels which lie below it. Beneath the palmar fascia lie two sets of *flexor* muscles of the fingers, and they present so beautiful a mechanical arrangement as to merit special notice.

The *superficial flexor* muscle passes down the front of the forearm and divides into four tendons, which become apparent after the removal of the palmar fascia, and are inserted into the second phalanges of the fingers, each tendon splitting at its termination, to give passage to the similar tendons of the *deep flexor* muscle, which passes from the upper part of the ulna to be inserted into the last phalanx of each finger. These *flexor* muscles are antagonized by the *common extensor* muscle of the fingers, which, like the flexors, divides into four tendons, one for each finger. Besides these, there are a special *extensor* of the index finger, a series of muscles forming the ball of the thumb, which move that organ in almost every direction, and various small slips giving lateral and other movements to the fingers.

The hand possesses marvelous adaptability to a great variety of uses. The fingers are fitted for grasping small objects or for suspending the

body from a horizontal bar. The hand may be made into a cup for conveying fluid to the mouth, or extended rigidly, as when swimming. A small needle may be used with great precision and delicacy in the same hand that wields a heavy sledge hammer or holds a taut rein over the back of a turbulent horse. The great flexibility of the fingers and their capacity for training in accurate work is seen in their use in playing upon the violin or the piano. Some of the commonest daily uses of the hand consist of very intricate and complex working of groups of muscles in which coördination is exact. Controlling the pencil in drawing or writing and rolling a cigarette may be cited as examples. It is not strange, in view of its adaptability and capacity for such accurate adjustment, that the hand was thought in old times to be a reservoir of special force which passed out of it upon occasion. The "laying on of hands" for the cure of the sick, or for the transmission of a beneficent influence, is as old as the Scriptures; and the touch of royalty was supposed to possess special virtue in healing scrofula, or "king's evil." See HANDS, IMPOSITION OF.

The markings in the palm of the hand are supposed to be indications of the character and temperament, and disciples of palmistry (q.v.) believe they can read the secrets of the future in the records of palmar lines and folds. The papillae on the skin of the finger tips are arranged in concentric or ovoid lines. Probably these lines are never identical in different individuals. It is said that the Chinese use an impression of the papillary lines on the pulp of the thumb tips as a means of identification; and to the measurements of criminals by the Bertillon method, impressions of their thumbs as a further standard of comparison and identification have been added by the police of the larger cities (see FINGER PRINTS). The investigations of Francis Galton (q.v.) in this respect were noteworthy. Fingers differ much in their size and model and give hands different expressions. Righthandedness is a natural condition, for which several causes have been assigned, no one of them being convincing. It has been considered due to a larger arterial supply to the right side; to "an innate tendency to a predominance of nutrition on the right side in fetal life" (Breschet); to the position of the fetus *in utero*; and to the assumed fact that the centre of gravity of the body lies on the right side. Lefthandedness occurs in about 9 per cent of human beings.

There are many congenital and developmental anomalies encountered in a study of hands. In some rare cases the hand is wanting altogether. This condition is termed *achiria*. If one or more fingers be missing, the condition is termed *ectrodactylism*. *Hypophalangism* is the name given to the condition in which the number of phalanges in a finger is less than normal. *Polycheiria* denotes a supernumerary hand; *polydactylism*, a supernumerary finger; *polyphalangism*, the condition in which the number of phalanges in a finger is greater than normal. The union of fingers together, web fingers, or *syndactylism*, also occurs; as well as cleft hand, club hand, and other deformities. In the disease *acromegaly* (q.v.) an enlargement of the hands takes place. Changes in the fingers and hands occur in many other diseases, as in *myxoedema* and *syngomyelia* (q.v.). In pulmonary tuberculosis the extremities of the fingers may be

bulbous, or clubbed, from change in the condition of the peripheral circulation. Consult Gray, *Anatomy* (Philadelphia, 1913).

HAND, COMPARATIVE ANATOMY OF THE. In birds the hand has been so profoundly modified for flight that it is considered as a distinct sort of organ—the wing. Among Amphibia the tailed forms have the hand constructed on the same general plan as the foot; it thus consists of digits, palm, and wrist; or, in terms of the skeleton, phalanges, metacarpals, and carpals, the latter the equivalent of the tarsals of the foot; in all amphibians there are four digits on the hand, except in three genera which have only two or three, but the number of phalanges differs considerably. The Urodela have a carpus of nine bones—a centrale, radiale, ulnare, intermedium, and five carapales; but in the Anura the intermedium is wanting. Among reptiles we find a general resemblance in the hand to that of the Urodela, though the digits bear claws or nails, which are always wanting in the Amphibia; crocodiles have no intermedium, and the carapales are only partially developed.

Among mammals we find a very great variety in the form and uses of the hand, the number of functional digits varying from one to five, though the number of phalanges is remarkably constant, for except in Cetacea there are two in the first and three in each of the others. In monotremes and marsupials the hand possesses no peculiar features worthy of special note, though in *Urchidna* it is very stout and powerful, while among kangaroos it is rather small and comparatively feeble. The hands of the *Edentata* are remarkable for the reduction in the number of digits to four, three, or even two, and the long and very strong claws which they bear. In the Ungulata we find an even stronger tendency towards suppression of digits, for there are never more than four, and usually there are only two, sometimes only one, functional. In this order the hand resembles the foot (q.v.) so closely that it is not necessary to repeat here the various modifications; suffice it to say that the tapirs have four digits on the hand and only three on the foot, and that the metacarpals of the camel are separated by a deep cleft. In the Sirenia there are only four digits, and these are united by the integument to form paddles and bear only rudimentary nails. The Cetacea also have the hands transformed into paddles; but the carpus is made up of polygonal bones, the phalanges are numerous, and there are no nails. The hand of the Carnivora has never less than four digits, and they always bear claws, usually sharp and curved, and in cats retractile. The hand of the elephant is remarkable for being larger than the foot and for its very short and thick carpal, metacarpal, and phalangeal bones. Hyrax has four toes on the hand, but only three on the foot, and the nails are nearly flat. The Rodentia have rather small, often weak hands, with five clawed digits, while the Insectivora have rather stout hands, especially the moles. Of all mammals, bats have the most profoundly modified hands, since with them, as with birds, flight is the object in view. There is only one bone in the proximal series of the carpus, and the metacarpal bones and phalanges are greatly elongated to form the framework for the wing, which consists of a delicate membrane stretched between the digits and the foot. There are five digits, but only the first two (sometimes only the first) are provided with claws. Among the

Primates we find a hand more nearly like that of man, the digits being provided with flat nails, and the first digit being opposable to the others and thus forming a true thumb. The marmosets, however, have sharp curved claws, and the thumb is not opposable. Of all mammals, the gorilla has a hand most like that of man.

HAND, EDWARD (1744-1802). An American soldier of the Revolution, born at Clydull, Kings County, Ireland. He came to America in 1774 and practiced medicine in Pennsylvania until the outbreak of the Revolution, when he served at the siege of Boston as lieutenant colonel in William Thompson's brigade. In 1776 he was appointed colonel. He served in the battles of Long Island and Trenton in 1777, was promoted to brigadier general, succeeded John Stark at Albany (1778), and took part in Sullivan's campaign against the Six Nations. He was in command of a brigade of light infantry (1780) and soon after succeeded Scammell as adjutant general; in 1798 Washington recommended him to a like post for the war with France. He was a member of the Continental Congress in 1784-85 and was a signer of the Pennsylvania constitution (1790).

HAND-BALL'. A game of ball similar to the English Fives, played in the United States chiefly on account of its physical benefits in training for contests of endurance, though it is also one of the sports under the regulations of the Amateur Athletic Union. It seems clear that the game is of Celtic origin and very ancient. There is an apparently authentic mention of its being one of the Tailten games, in the time of Ere, the last King of the Firbolgs, a race which inhabited Ireland in the early centuries of the Christian era, and it is of interest that the Venerable Bede records that St. Cuthbert excelled in the game.

Though the game may be played on a court of any reasonable size, a regulation court should be from 60 to 65 feet long, 22 to 25 feet wide, and 30 to 35 feet high in the front, tapering down to 12 feet at the back wall. A brick wall faced with marble makes an ideal front wall; the side walls should be faced with cement. The floor should be of white pine and very rigid. About 30 feet from the front wall a line is drawn parallel to it across the court, called the "ace line." Near the front wall is drawn the "over line." Every service coming off the wall must fall between these two lines to be in play. The ball should be a hollow sphere of rubber, $1\frac{7}{8}$ inches in diameter and $1\frac{5}{8}$ ounces in weight. The game is started by one player "tossing" out the ball on to the ground and hitting it on the rebound, with his hand, against the end wall. If it falls inside the short line, and the other player fails to return it, it counts an "ace" to the server. Should it be returned and the original server fail to return it, it is a "hand out." Then the service changes, and the game goes on alternately. The game is won by the player who first gets the number of aces agreed upon. In professional games the number is usually set at 21. Consult Egan, *Handball*, in "Spalding's Athletic Library" (New York, 1913).

HANDCUFFS, or HANDIRONS. See IRONS.

HANDEL, GEORGE FREDERICK, GER. GEORG FRIEDRICH HÄNDEL, hən'del (1685-1759). A famous German musical composer, the greatest master of the oratorio. He was born at Halle an der Saale, Feb. 23, 1685. His father, a barber, and afterward a surgeon, at Halle,

so opposed the development of his son's musical proclivities that the lad was obliged to practice at night upon a small clavichord secretly placed in the attic, when the rest of the family were asleep. A visit paid with his father in 1692 to a stepbrother in the service of the Duke of Saxe-Weissenfels had important results. Whenever during this visit young Handel found opportunity, he stole into the ducal chapel and played upon the organ. The Duke, chancing to hear him, questioned him, and, learning of his father's opposition, persuaded the latter to abandon his intention of making a lawyer of the boy. As a result, on returning to Halle, Handel began a thorough study of music under Zachau. Going to Berlin in 1696 to pursue his studies further, he became acquainted with Ariosti and Buononcini.

In 1703 he took a modest position in the orchestra of the Hamburg Opera House, but soon astonished the public by the skill with which he presided at the harpsichord during the temporary absence of the renowned Keiser. At this time he also applied for the post of organist at Lüneburg; but learning that one of the stipulations in the competition was that the successful candidate should marry the daughter of the retiring organist, he withdrew. At Hamburg he formed a friendship with Mattheson, and when, in 1705, Handel produced his first opera, *Almira*, Mattheson took the chief rôle.

Visiting Italy, Handel produced in Florence the opera *Roderigo*, and in Venice *Agrippina*, which he composed in three weeks, and which was received with enthusiasm. Here he met Scarlatti, who greatly influenced Handel's subsequent works, Gasparini, and Lotti, and in Rome became the intimate of Cardinal Ottoboni. In 1709 he took service with the Elector George of Hanover (afterward George I of England).

In 1710 Handel went to England, where he spent practically the rest of his life. There the taste for Italian music was on the increase, and his *Rinaldo* achieved great success. The opera was patched together from his earlier works in 14 days and would have been finished sooner had the translator of the libretto been able to keep pace with him. The year 1713 saw the production of his *Tecum* and *Jubilate*, in celebration of the Peace of Utrecht. They brought him a life pension of £200. When George I ascended the English throne, Handel, though previously in his service, avoided him. He feared his Utrecht music might have offended the former Elector, as the German Protestant princes had not regarded the treaty with favor. But his *Water Music*, performed during the Thames fête, led to a second annuity of £200. For three years, beginning 1718, Handel was musical director to the Duke of Chandos and during that time composed, among other pieces, the two Chandos Te Deums and the 12 Chandos anthems. During the period from 1720 to 1740 Handel, spurred on by the rivalry of Ariosti and Buononcini, produced more than a score of operas. The fact that their instrumentation was not fully written out, and the change in the style of opera demanded in England, prevented these works from receiving their just appreciation; but it is beyond cavil that they were superior to the compositions of his contemporaries.

Handel's career in England should have been uninterruptedly prosperous, but he ruined himself financially by undertaking, in rivalry with Buononcini, whom he finally vanquished, the

responsibilities of operatic management as well as of composition. He, however, retrieved his fortunes by his oratorios. In January, 1739, he produced *Saul*, followed in April by *Israel in Egypt*, but although both oratorios were highly praised, they met with no popular favor at the time. The latter is considered by many even superior to his famous *Messiah*. The *Messiah* was produced for the first time April 13, 1742, in Dublin. At the first London performance, March 23, 1743, in Covent Garden, when the "Hallelujah Chorus" was reached, the King and the whole audience rose, and thus established a custom which continues to this day. George II's victory at Dettingen was celebrated by Handel with the Dettingen Te Deum and Anthem. In 1752 his eyesight began to fail, and he became totally blind. He, however, continued to accompany his oratorios on the organ, and did so at a *Messiah* performance only eight days before his death, which occurred April 14, 1759. He is buried in Westminster Abbey.

Though of liberal disposition and much interested in charity, Handel was at times choleric. Quarrels with his singers had much to do with his failure as a manager.

Handel's service to music lies largely in the grace and freedom with which he handled the musical forms of his day, especially as compared with the severer and much greater Bach, of whom he was a contemporary. Handel founded no school; he lacked the genius for creating new forms or for revolutionizing existing musical conditions. His choral work, especially in *Israel in Egypt*, *The Messiah*, and *Judas Maccabaeus*, is great because of the massive effects he obtains by simple means. Greater musicians have superseded him in the fields of operatic and instrumental composition, but in oratorio he is still supreme. His works include 27 oratorios, 40 operas, 30 concertos for various instruments, many anthems and several cantatas. See ACCOMPANIMENT; CHRYSANDER.

Bibliography. Marshall, *Handel*, in the "Great Musicians Series" (New York, 1883), an excellent short life; Rockstro, *Life of G. F. Handel* (London, 1883); Chrysander, *G. F. Handel* (Leipzig, 1858-67), the most authoritative biography; Whittingham, *Life and Works of Handel* (London, 1882); Cummings, *Handel* (ib., 1904); F. Volbach, *Georg Friedrich Händel* (Berlin, 1907); R. A. Streacfield, *Handel* (London, 1909); M. Brenet, *Handel, Biographie critique* (Paris, 1912).

HANDEL AND HAYDN (hā'd'n) SOCIETY. See CHORAL SOCIETIES.

HANDELMANN, hān'del-mān, GOTTFRIED HEINRICH (1827-91). A German historian and antiquarian, born at Altona and educated at Kiel, Heidelberg, Berlin, and Göttingen. His first historical work was *Die letzten Zeiten hansischer Uebermacht im skandinavischen Norden* (1853). With his friend Theodor Lehmann he edited *Jahrbücher für die Landeskunde der Herzogtümer Schleswig-Holstein und Lauenburg* (1858-63). After several years devoted to American history he turned his attention again to German antiquities, especially in his own province. In 1866 he was made professor at Kiel and conservator of the antiquities of Schleswig-Holstein. Handelsmann's other historical works include: *Geschichte der Vereinigten Staaten* (2d ed., 1860); *Geschichte der Insel Haiti* (2d ed., 1860); *Geschichte von Brasilien* (1860); *Die dänische Reunionspolitik um die*

Zeit des siebenjährigen Krieges (1866, 1870); *Geschichte von Schleswig-Holstein* (1874).

HANDEL SOCIETY. 1. A society formed in England in 1843 for the purpose of publishing Handel's works. Its object was accomplished between 1843 and 1858. The society, however, was dissolved in 1848. 2. A German society formed at Leipzig in 1856, which under the editorship of Chrysander has issued Handel's works in 100 folio volumes (1856-94). See CHRYSANDER.

HANDFASTING (A.S. *handfestnung*, a clasping of the hand, from *hand*, hand + *fast-nung*, fastening, from *fastnian*, to fasten, from *fast*, OHG. *fasti*, Ger. *fest*, fast, firm). An ancient ceremonial of betrothal, which prevailed extensively in western Europe during the early Middle Ages, and which consisted in the plighting of troth and the clasping of hands in the presence of witnesses. It belonged to the class of betrothals known as *sponsalia per verba de presenti*. In Scotland the practice of handfasting developed into an irregular form of marriage of a temporary character, good for a year and a day. At the end of that time the relation came to an end or was made permanent by a ceremonial marriage. See BETROTHAL; MARRIAGE.

HAND GRENADE. A shell designed for throwing with the hand, used for many hundred years; at first, as mere envelopes containing incendiary composition and afterward as explosive shells. The invention of the shell gun caused them to fall into disuse, and upon the advent of the modern high-powered fast-firing gun, which stopped hand-to-hand fighting, they disappeared entirely for a time, but were extensively used in the Russo-Japanese War (q.v.). Some grenades are now fitted to be fired from rifles, and a new type merely carries burning composition, which floats for a time in the air and illuminates the ground beneath it. It is designed to disclose attempts to effect surprise and make night attack more dangerous. See GRENADE.

HANDICAPPING (from *handicap*, apparently *hand* & *cap*, in allusion to drawing lots from a cap). In all contests dependent upon strength and skill there will be some so superior that if they start under equal conditions with the other contestants they must always win. The consequence of this, if unrestricted, would be to deter other contestants; whereby not only would the sport be limited to these few, but the second class of players would lose the benefit of playing with them and learning from them the highest class in form. To remedy both these evils recourse is had to handicapping, i.e., an extra burden is placed upon, or a special requirement made of, a superior competitor, in favor of an inferior, in order to make their chances of winning equal.

In all sports wherein the competitors are to meet as members of the same association, careful note is taken of the performances of every man as they occur, i.e., the number of times he competes against other members of it, against whom it is, and by what margin he wins.

In speed foot races, in swimming, and in similar point-to-point contests, the slower performer in a handicap race has so much start ahead of the man whose past performances have put him in the first class, and therefore has a shorter distance to travel than his expert rival. In lawn tennis the players are handicapped by giving or owing strokes or by giving *bisques*. In

cricket handicapping is usually accomplished by allowing a large number of players to the inferior team, 11 men playing against 18 or 22. In horse racing on the flat the horse which has proved itself in the past by its performances, or which by age or size or sex is naturally superior, is, where handicapping is resorted to, required to carry a heavier jockey, or to have weights placed on the saddle which, with the jockey's weight, will effect the same object. In polo, as practiced in America, the different players are handicapped by an allowance or penalty of so many goals, i.e., in matches the teams whose aggregate handicaps are less than those of their opponents are allowed the number of goals which is the difference between them and their opponents. In yachting the boats and their sails are measured, and the boats whose hull and sails are the largest have to make an allowance which is deducted at the end of the race from the actual time which it has taken to sail over a given course. In chess and draughts certain "men" are allowed to the inferior player, and in billiards the better of two players allows a certain number of "points" so as to equalize the game. These are the principles of handicapping; their application is an inexhaustible subject.

HAND LEAD. A small lead, weighing from 5 to 15 pounds, used for sounding in shallow water. Since the general adoption of the Thomson sounding machine leads weighing more than 15 pounds are seldom used. See **LEAD, SOUNDING**.

HAND ORGAN. See **BARREL ORGAN**.

HANDS, IMPOSITION OF. The ceremony employed in religious use, both ancient and modern, to symbolize the conferring of certain inward spiritual gifts. It is the survival of the belief that power possessed by a person could be transferred by the touch of the hand. Moses set Joshua apart as the leader of the people by laying his hands upon him (Num. xxvii. 23). Christ was entreated to heal the ruler's daughter (Matt. ix. 18) by the same action, and He Himself adopted it in blessing children (Matt. xix. 15). It is apparent from the New Testament that it was considered from the beginning of the Christian Church to convey spiritual grace, specifically the gift of the Holy Ghost (Acts viii. 17; 1 Tim. iv. 14). It was accordingly employed in confirmation, ordination, and the healing of the sick. The name *chirothesia* was used for the actual laying on of hands, while that of *chirotonia* designated the mere symbolic extension of the hand where the recipients of the grace were more than one. The imposition of hands is retained in the Roman Catholic and Anglican communions in confirmation and ordination, for the latter purpose among various Protestant bodies also; while in the modern Roman Catholic church the mere authoritative lifting of the priest's hand has taken the place of the former actual contact in absolutism. The original magical significance has long since disappeared, and the ceremony is regarded as symbolic of the divine bestowal of grace.

HANDSAW FISH. A name in California, translating the Spanish *serra*, for the local lancet fishes, in reference to their rows of sharp teeth. See **LANCET FISH**.

HANDSEL (AS. *handselen*, Icel. *handsal*, delivery into the hand, from *hand*, hand + AS. *selen*, *sylen*, Icel. *sal*, Eng. *salce*, a giving, from *sellan*, *syllan*, to give, OHG. *sellan*, Eng. *sell*). A transaction of sale or barter of chattels or the striking of a bargain, evidenced by the shaking

of hands—an ancient ceremonial which can be traced in many systems of primitive law. Its modern form is the giving of earnest (q.v.). The term is also sometimes used to denote earnest money, or part payment, by way of binding a bargain. In Scotland it popularly signifies a first transaction in trade, as, e.g., the first sale effected in the day or week, and is likewise employed to signify a present in the nature of a New Year's gift on the first Monday in the year—hence called *Handsel Monday*.

HANDSWORTH. A suburban municipality of Sheffield, in Yorkshire, England, 3 miles east-southeast of that town. It is noted for its extensive manufacturing industries. Pop., 1901, 13,404; 1911, 14,198.

HANDSWORTH. A manufacturing town of Staffordshire, England, a suburb of Birmingham. It has undergone extensive improvements and has a number of public works. Pop., 1901, 53,000; 1911, 68,610.

HANDWRITING. Penmanship. The subject of handwriting in schools has received considerable attention recently from two points of view, the psychological and the pedagogical. Both include the questions of hygiene involved.

Psychologically writing involves a large number of movements, the coordination of arms, hands, and eyes, posture, and the control in general of the nervous system. Simple as writing, apparently is, the training required demands control of the large muscles, the development of nerve centres, and the control of the small or accessory muscles in the wrist, fingers, and thumb, since the movements employed are not instinctive. The teaching of writing is based on the elimination of a large number of scattered nervous impulses, which are seen in the child in the first stages of the learning process, and the gradual development of an automatic habit. In the beginning visual control and attention to details play an important part and are gradually pushed more into the background. Legibility demands such visual control and attention to details until harmonious regularity is secured. Writing, reading, and speech are so closely allied in the brain centres that psychologically much may be gained by associating them closely in the teaching of writing. Generally, however, learning to write is similar to the development of any other type of motor habit in which certain definite movements are specialized until they become mechanical and sub-conscious. Attention to these movements, once they are well developed, only serves to impair accuracy, ease, and speed.

From the pedagogical point of view several points have been discussed. Many cases of spinal curvature and eyestrain among school children were traced by French doctors to the position assumed in writing as well as to the style of writing. Hence close attention was given to posture and to the question of slant in writing. Since a pronounced slant frequently involved the raising of the right shoulder, lateral curvature was attributed to this cause, as was also eyestrain, for in this position the right eye is farther from the paper than the left, thus leading to unequal accommodation. In 1879 the French Society of Public Medicine recommended that in writing the weight of the body should be equally distributed, the back be kept erect, and the shoulders parallel to the desk; that either vertical writing should be adopted or the paper be inclined to the left through an angle by which

the writing inclines from the vertical. It was claimed that, while vertical writing is more legible, slant is more rapid, since the downward and upward strokes can be made more rapidly, and the hand moves more freely. A recent study, by Leonard P. Ayres, indicates that from the point of view of legibility the styles may be classed in the following order: vertical, i.e., from 90° to 80°; medium slant, 80° to 55°; and extreme slant, 55° to 30°. In another study it has been found that vertical writing is not natural with children, and that even when following a copy they always slant about 10° from that. The best results can probably be secured by tilting the paper at an angle of 30° from the edge of the desk.

In the matter of method it is now generally held that the aim to be secured is legibility rather than calligraphy, and that the synthetic method of writing whole words is better than the analytic or building up of letters and words by practicing on strokes and hooks. The process of writing requires arm movements, especially of the forearm, and the delicate adjustments of the smaller muscles of the hand and fingers; the process is one whole, however, and the question whether arm and finger movements should be developed separately is no longer of importance. Since the early stages in the learning process require close attention to details, the writing lesson should be a separate unit; but there is some doubt whether in the later stages it should be retained as an independent lesson or be taught incidentally. Professor Thorndike in his study of handwriting found that three school systems which devoted 75 minutes a week to writing as an independent subject produced no better results than two systems with a zero time cost, and that handwriting, like spelling, but unlike arithmetic, is not much influenced by school management. Writing beyond a certain quality or standard of general merit is undesirable and requires more time than it deserves in days of the typewriter. Rapidity, he found, is a good sign, and the quality of rapid writing is better than that of slow, while practice to secure high quality of writing reduces speed. Professor Thorndike has developed a scale of handwriting based on the judgments of from 23 to 55 competent judges. It was found that 1000 samples could be ranked for general merit in 20 groups, and 20 was made the basis of the scale. Hence, to measure a specimen of handwriting, it can now be put alongside the scale and given the rating of the quality of writing to which it is nearest to the scale. Dr. Ayres has constructed another scale based solely on legibility as a test. He found also that good appearance of writing is not necessarily accompanied by high degree of legibility.

From the hygienic point of view, which is necessarily a consequence of those already discussed, it is recommended that in writing the pupil sit squarely at the desk, which should project about 2 inches over the seat, that he keep both feet on the ground, and that both elbows rest on the desk and the head remain erect, the eyes being 12 inches from the paper. The light should come from the left in order to avoid the shadow of the hand falling on the paper. The paper should have a smooth but not shiny surface, and the ink be black. A large penholder with a rough surface and a smooth pen are recommended. During the early stages a base line is advisable and assists visual control, but

other lines, which were common in the copy-book days, restrict freedom and ease of movement.

Freeman, "Experimental Study of Handwriting," in *Psychol. Rev. Mon. Suppl., Yale Studies*, N. S., vol. i, no. 3; E. Javal, *Physiology of Writing* (New York, n. d.); N. E. Thompson, *Psychology and Pedagogy of Writing*, bibliography (Baltimore, 1911); E. L. Thorndike, "Handwriting," in *Teachers College Record*, vol. xi, part ii (New York, 1910).

Identification. The genuine signature or other writing of a person by his own hand, as distinguished from printed or typewritten documents. The law makes the validity of many acts depend upon their being committed to writing and signed or subscribed by the party to be charged thereby, and attaches great importance to the signature to legal instruments. When handwriting is in dispute, it must often be proved by other evidence than the writing itself. When, however, any document purporting or proved to be 30 years old is produced from the proper custody, there is a presumption that the signature and every other part of it which purports to be in the handwriting of any particular person is in that person's handwriting. But the genuineness of writing not so old as this must be admitted or proved. This proof may be made by witnesses who actually saw the person write the identical words or signature or who are acquainted with the handwriting of the alleged writer, who in the last case may testify to their opinions that the writing in question was or was not written by him. Unless, however, the making of the writing in question was in fact seen by the witness, his testimony is opinion evidence, the probative force of which is quite different from that of the evidence of eyewitnesses. When the genuineness of the handwriting on any document is questioned, the opinion of any person who is acquainted with the handwriting of the alleged writer, that it was or was not written or signed by him, is admissible: (1) When the witness has seen the person write, though only once and that long ago. The value of this sort of evidence depends upon the intimacy of the acquaintance of the witness with the handwriting in question and, though admissible, is not infrequently of no probative value whatever. (2) Where the witness has received letters or other documents purporting to have been written by the alleged writer of the questioned writing or answers to others written by him or by his authority to said person. (3) When, in the ordinary course of business, writings purporting to have been written by the alleged author of the questioned writings have passed through the witness's hands. (4) When holding at the time of the alleged writing an official position, signatures or other writings of the alleged author have come before the witness. (5) When the witness has seen handwriting which the alleged author has acknowledged to be his. (6) Experts. Whenever the genuineness of the writing is in controversy in judicial proceedings, the opinions of expert witnesses who by study, occupation, or habit have become skillful in marking and distinguishing the characteristics of handwriting, are in certain cases admissible as evidence. The opinions of bank tellers, cashiers, and professional experts are admissible under this rule. The limitations and

applications of the rule are involved in considerable controversy, which for lack of space cannot be here considered. The probative value of this sort of evidence may range from zero to that of a moral certainty, depending upon the nature of the case, the amount of material for comparison, the experience of the witness, and the reasons advanced in support of his opinion. The testimony of experts is entitled to the same credit and is tested by the same rules as are applied to that of other witnesses, and should have weight with the court and jury in accordance with the qualifications, ability, and experience of the witnesses. It is not, however, conclusive, but its weight is entirely for the jury.

In some jurisdictions a holographic will, by which is meant a will written entirely in the handwriting of the testator, does not require to be attested by witnesses. Such is not the general law of the United States, England, or Ireland, but is the law in Scotland, Quebec, Manitoba, and Louisiana, as well as in most of the continental states of Europe.

Typewritten documents often come in question in legal proceedings and may frequently be identified as having been written on a certain machine. Every typewriting machine, new or old, has its own peculiarities, either of style of type, defective letters, lack of alignment, angle as respects the base line, etc., which serve to distinguish it from all others, when its work is critically examined by an expert in this line of work. See **HOLOGRAPHIC**; **EXPERT**; **EVIDENCE**; **FORGERY**.

Ayres, *A Scale for Measuring the Quality of Handwriting in Children* (Russell Sage Foundation Publication, New York, 1912); *The Handwriting of Junius, Professionally Investigated by Mr. Charles Chabot, Expert* (London, 1871). This last work is the best work on the investigation of handwriting with which we are acquainted.

HANDY ANDY. A humorous Irish story by Samuel Lover (1842).

HÄNEL, hä'nel, ALBERT (1833-). A German jurist and politician, born in Leipzig. He studied at Vienna, Leipzig, and Heidelberg, in 1860 became a professor at Königsberg, and in 1863 at Kiel. One of the founders of the Liberal party in Schleswig-Holstein after the annexation of the duchies to Prussia in 1866, he was elected to the Prussian Chamber of Deputies and to the Reichstag of the North German Confederation and subsequently to the Imperial Reichstag. He became known as a leader of the so-called Fortschrittspartei, or Progressists, which, after the fusion with the Secessionists in 1884, was styled the Deutschfreisinnige Partei. Upon the break-up of the party in 1893, he represented the Freisinnige Vereinigung, but in the elections of the same year to the Reichstag he was defeated by the Social-Democratic

candidate. In 1898-1903 he was again in the Reichstag. He retired to private life in 1911. He wrote *Studien zum deutschen Staatsrecht* (1873-88) and *Die Gesetzgebung des deutschen Reichs über Konsularwesen und Seeschifffahrt* (1875).

HANFORD. A city and the county seat of Kings Co., Cal., 30 miles south of Fresno, on the Southern Pacific and the Gulf, Colorado, and Santa Fe railroads (Map: California, F 6). It is in an agricultural and oil-producing region, has fruit-canning factories, and contains two sanitariums and a public library. Pop., 1900, 2929; 1910, 4829.

HANFSTÄNGEL, hünf'shtäng'l, FRANZ VON (1804-77). A German lithographer and photographer, born in Bayernrain. He studied lithography under Mitterer at Munich, then spent six years (1819-25) at the Munich Academy. In 1834 he founded his well-known lithographic establishment, and in the following year he was summoned by the Saxon government to Dresden to execute his great work, completed in 1852, of copying in lithograph the canvases of the Dresden Gallery. In 1844 he returned to Munich, leaving his establishment at Dresden to his brothers Max and Hans. From 1848 to 1853 he gave up lithography for galvanography and then devoted himself almost entirely to photography and later to photogravure and heliogravure. His son EDGAR HANFSTÄNGEL (1842-1910) succeeded to the business in 1868. The most important publications of the house are the periodical *Die Kunst unserer Zeit*, first published in 1890, and fine collections of carbon-print reproductions, including the contents of the principal European galleries, and the *Galerie moderner Meister*.

HANGAR, häng'gär. A shed or other structure designed for the accommodation of airships. The term is usually applied to large balloon sheds built to house dirigibles. These sheds, built in a wide variety of designs, may be of the fixed or permanent type, such as those constructed for military aeronautical establishments and for large airships (as the German Zeppelins) used for passenger service, or they may be movable, such as the portable sheds designed to shelter the airships used in military operations. The balloon sheds used for the early Zeppelins were mounted on floats which could be towed to any desired point or placed in any direction. The permanent balloon shed, which may be built of wood, iron, reinforced concrete, or other materials, presents many interesting engineering problems. In some cases it is arranged on a form of turntable, so that it may be revolved to secure the most favorable egress for the airship with the prevailing wind, as in the case of the revolving balloon shed near Biesdorf, Berlin. This, while practical, is an expensive arrangement, such installations costing as much as \$350,000. Circular hangars to accommodate a number of airships have been designed, while various designs with doors at either end or with roof and sides arranged to open for the exit of the dirigibles have been attempted. A double hangar for the accommodation of two dirigibles was a favorite type in 1914. The doors alone present many interesting considerations, while the framing, covering, and anchorage facilities all must be considered. A substantial and solid structure was the permanent balloon shed at Cologne, Germany, which was protected during the German War of 1914 by rapid-fire guns

mounted on the cathedral and other lofty structures in the city. This hangar was very nearly 500 feet in length, 170 feet in width, and 92 feet in height, designed to accommodate one of the huge military Zeppelins. Its double doors through which the airship emerged were 82 feet in height, each door being 24 feet wide, and susceptible of being opened by an electric motor drive in four or five minutes. Other sheds of the fixed or turntable type in Germany were located at Berlin, Potsdam, Königsberg, Posen, Kiel, Hamburg, Düsseldorf, Metz, Frankfurt, Mannheim, Baden, Strassburg, Gotha, and Friedrichshafen, there being nearly 30 stations equipped in 1914. France also has many balloon sheds for its dirigibles, in 1914 stated to furnish accommodations for from 40 to 50 airships of various sizes; but in many of these the error had been made of making them too small and thus inadequate for the later dirigibles, which were approaching the Zeppelins in size.

For field work portable hangars have been developed in the Italian and other military aeronautical services, where the main arches are made up of a number of steel sections, which are fitted together and held by pins. These arches are built on the ground and are then raised to a vertical position, resting on bedplates. Each arch is bound to its neighbor by cross-brace pieces of structural ironwork, and they are successively raised with cables by means of iron poles or towers. Once the skeleton is erected, a covering material, consisting of metallized cloth, having great strength and being weatherproof, is used. The whole structure can be erected and covered within two days. The first of these portable military hangars was 270 feet in length by 100 feet in width and 80 feet in height and required 20 European freight cars for its transport. The dismounting of the balloon shed is attended with no greater difficulty than its erection, and the device has proved very successful.

For aeroplanes a large and elaborate shed is not necessary, as all that is necessary is to shelter the machine. Consequently these are of simple construction, of such durability and design as may be required by circumstances, varying from a canvas tent or a wooden or sheet-metal shed to a more permanent structure. For a discussion of German practice in the construction of balloon sheds, consult Sonntag, *Ueber die Entwicklung und den heutigen Stand des deutschen Luftschiffhallenbaues* (Berlin, 1913). See AERONAUTICS; MILITARY AERONAUTICS.

HANGCHOW, hāng'chow'. Capital of the Chinese Province of Chekiang (Map: China, L 5). It is situated near the southern end of the Grand Canal, southwest of Shanghai, on an indentation of the East China Sea. Its walls have a circuit of 12 miles, are 30 to 40 feet high, 20 to 30 feet thick, and are pierced with 10 large gates. In 1904 a stone jetty was built at Kia-hing, the port for the shipping on the Grand Canal leading up to Shanghai. The streets are tolerably wide and clean, and there are many good shops. The principal street, which runs from north to south, is 4 miles long. The west wall is washed by the famous Si-hu, or West Lake, the chief attraction of the city. It is a beautiful sheet of water, about 8 miles in circumference, dotted with islands on which are built monasteries, memorial halls, and shrines. On its west side is an abrupt but magnificent range of hills. A little farther to the west are

numerous finely situated Buddhist temples to which tens of thousands of pilgrims repair daily. Hangchow has long been noted for its magnificence, its wealth, and its luxury. Marco Polo visited it several times towards the close of the thirteenth century, and describes it as 100 miles in circuit, and gives the number of its bridges as 12,000, all of them of stone. The name he gives it is *Kinsay*, a corruption of Chinese king-shi, meaning 'capital' or 'metropolis,' Hangchow having become in 1127 the capital of the Sung dynasty when the Kin Tatars conquered the northern provinces.

In December, 1896, Hangchow was opened to foreign residence and trade in accordance with a treaty made at Shimonoski between the Chinese and Japanese in the spring of the preceding year. A foreign settlement containing 1809 *mou*, or Chinese acres, or about 300 English acres, has been laid off on the east bank of the Grand Canal about 10 li (3¼ English miles) from the Wun-li Gate. One of the government mints is situated at Hangchow. Communication with the city can be maintained by small canals leading from the Grand Canal. Hangchow is noted for its silk, the output of which is steadily increasing, and for its fans, the making of which is an important industry. It has no direct foreign trade, all produce of native origin finding its way to Shanghai by the canal or coastwise, and foreign goods come in in the same way. The exports consist chiefly of silk, paper fans, lotus nuts, and tea, and the imports of copper and spelter from Japan for use in the mint, and of native produce, of brass buttons, leather, and tobacco. In 1912 the imports from foreign countries amounted to \$2,201,000, native imports to \$2,880,400, and the total exports to \$10,063,000. The Tsien-tang River and the Grand Canal are the chief arteries of inland trade. The former is navigable at all seasons, but unfortunately is tortuous and shallow and at certain seasons of the year is subject to an "cage," or "bore," which rises to a height of 15 feet and has a velocity of 15 miles an hour. Further it is not connected with the Grand Canal, some miles distant, and the transfer of goods and passengers is very slow, troublesome, and expensive. Many firms are engaged in the steam-launch transportation business on the canal, and the journey to Shanghai may be made in from 20 to 24 hours. A railroad to Soochow is to be built by local capital. The population of the city proper is estimated at 300,000, but the suburbs, which are properly included in the name Hangchow, are densely populated, and the whole may be set down as not far from 600,000. On Dec. 20, 1861, Hangchow was captured by the Taiping rebels after a protracted siege in which it suffered much.

Bibliography. *Marco Polo*, edited by Yule (2 vols., London, 1874; 3d ed. by Cordier, ib., 1903); G. M. Moule, *Notes on Hangchow* (1889); Seidmore, *China, the Long-lived Empire* (New York, 1900); H. B. Morse, *Trade and Administration of China* (rev. ed., ib., 1913).

HANGFIRE. When the powder charge of a gun fails to explode promptly upon being ignited, it is said to *hang fire*. It is due to a variety of causes, such as moisture, insufficient priming charge, etc., and is a prolific cause of accidents with modern breech-loading guns. Smokeless gunpowder is not easy to ignite, and the small priming charge of black powder sometimes fails to give out a sufficient burst of flame,

in which case only a small portion of the charge takes fire, and the burning may last several seconds before the charge explodes. When several guns are being fired, the man who operates the breech may think his own has gone off and open the breech while the powder is still burning. If the gun is of large size and is not fitted with safety gear to prevent the turning of the breech-block until the gun has recoiled after fire, the premature opening of the breech may cause the death or serious injury of every one in the vicinity. See GUNS, NAVAL.

HANGING. The common-law mode of inflicting capital punishment. The sentence pronounced by the court indicates the method of execution, viz., that the convict "be hanged by the neck until he is dead." The time and place of the execution are also, within statutory limits, fixed by the sentence. In England, formerly, in atrocious cases, it was usual for the court to direct a murderer to be hung upon a gibbet in chains near the place where the crime was committed—also at a later period to order the body to be dissected—and the execution to take place on the next day but one after the sentence was passed. But these useless severities were abolished by the Statute 6 and 7 Wm. IV, c. 30.

The mode of punishment by hanging was first adopted in England in 1241, when Maurice, a nobleman's son, was hanged for piracy. Other more barbarous modes of inflicting death were long in use, but have been abolished, and hanging has long been the ordinary mode of executing capital punishment, in the United States as well as Great Britain. In a few of the United States electrocution (q.v.) has been substituted for hanging as a less repulsive and more humane method of capital punishment. The publicity which formerly attended the hanging of criminals has, in most civilized communities, been done away with. In treason, hanging is part of the statutory punishment, coupled with mangling the body, though the crown may change the sentence into simple beheading, except in the case of women, who are, in deference to their sex, legally exempt from the latter form of execution.

The cause of death in hanging is complex. The compression of the windpipe by the cord, the obstruction of the return of venous blood from the head, and of the flow of arterial blood to the brain, the stretching or tearing of the nervous structures of the neck, and in some instances dislocation or fracture of the vertebrae, may concur in the production of the fatal effect, which, though sometimes attended with violent struggles, is probably in most cases nearly instantaneous. See STRANGULATION; EXECUTION; CAPITAL PUNISHMENT.

Hanging, Drawing, and Quartering was, in early English criminal jurisprudence, a mode of executing the sentence of capital punishment on a traitor. It consisted in drawing the criminal to the place of execution on a hurdle and, after hanging him, dividing the body into quarters. This form of executing the sentence was substituted by statute (54 Geo. III, c. 146) for the more ancient and barbarous practice (to which the word "drawing" originally referred) of disemboweling the criminal. The more humane and decent method of execution by hanging, without the barbaric concomitants of drawing and quartering, is now employed in Great Britain as well as in the United States, in those rare cases in which treason is still punished with death.

HANGING GARDENS OF BABYLON.

The name commonly given to a structure of ancient Babylon, famed as one of the seven wonders of the world. It appears to have been a sort of building on the roof of which were planted trees, flowers, and shrubs, and is said to have been constructed by Nebuchadnezzar for the gratification of his Median Queen, because the Babylonian plain seemed dreary to her in comparison with the mountain scenery of her native land. Strabo (xvi, 1, 5) says the structure was a square, four plethra in area; it rested on arches supported by hollow pillars of burnt brick, filled with earth, in which the roots of the trees were planted; the top consisted of terraces, and a force of men was constantly employed pumping up water from the Euphrates for irrigation. Ctesias, in Diodorus, ii, 10, describes the hanging gardens at length and ascribes them to Semiramis. There is also a reference to them in an excerpt from Derosus, in Josephus (*Ant.*, x, 11), and a description in Curtius Rufus (*Hist. Alex.*, v, 1). Koldewey, in the course of his excavations at Babylon, has discovered in the northeast corner of the South Palace in the mound called El Kasr a vaulted structure that in many respects corresponds to the descriptions, though the measures are smaller than those given by the classical writers, as in the case of the walls. Consult P. S. Hancock, *Mesopotamian Archaeology* (New York, 1912), and Koldewey, *Das wieder erstehende Babylon* (Leipzig, 1913).

HANGING ROCK, BATTLE OF. A battle fought on the western bank of Hanging Rock Creek, S. C., on Aug. 6, 1780, during the Revolutionary War, between about 800 American militia under Colonel Sumter and an equal number of Loyalists under Major Carden. The Americans in an impetuous charge at first drove the Loyalists back from their camp, but, delaying to plunder, fell into disorder, and in consequence were themselves driven back and forced to retreat. The Loyalists lost 269 in killed, wounded, and missing. The loss of the Americans was not recorded. Consult Dawson, *Battles of the United States* (2 vols., New York, 1858), and Lossing, *Field Book of the American Revolution* (2d ed., New York, 1855).

HANGING WALL. A term used to designate the upper or covering wall of an inclined ore body, mineral vein, or stratum. If the mineral deposit be flat, the term *roof* is used. In mining it is sometimes necessary to support the hanging wall either by pillars of ore or masonry or by props of wood. See FOOTWALL.

HANG'NEST'. A name often used in books, for the birds of the American family Icteridae, sometimes called troupials, but more usually orioles, all of which build pensile nests. (See NIDIFICATION; ORIOLE.) The Baltimore oriole is the most familiar North American representative of the family, and is commonly known as hangbird in certain localities.

HANGUL, hūn'gool (native name). The Kashmir stag (*Cervus kashmirianus*), which closely resembles the red deer (see DEER) of Europe, of which it was formerly considered to be only a local race. The antlers differ from those of the European stag in not forming a cup at the crown, which is simply forked. It is a forest-haunting animal and in summer remains at elevations between 9000 and 12,000 feet, but in winter is driven down into the valleys by snow. The proper shooting season is in October and November, when the stags are full-antlered and seeking the does. They roam widely.

HANIFAH, hā-nē'fā, or **ABU HANIFAH**. See **ABU HANIFAH**.

HANKEL, hān'kel, **HERMANN** (1839-73). A German mathematician, son of Wilhelm Gottlieb Hankel, born at Halle. He studied at Leipzig and at Göttingen under Riemann and Möbius, became privatdocent in mathematics at Leipzig in 1863, and professor extraordinary in 1867, and in the same year was called to Erlangen in the same capacity. His chief works were: *Zur allgemeinen Theorie der Bewegung der Flüssigkeiten* (1861); *Vorlesungen über die komplexen Zahlen und ihre Funktionen* (1867); *Die Entwicklung der Mathematik in den letzten Jahrhunderten* (1869; 2d ed., 1884); *Zur Geschichte der Mathematik im Altertum und Mittelalter* (published posthumously, 1874); *Die Elemente der projektivischen Geometrie in synthetischer Behandlung* (also posthumous, 1875). For his biography and an estimate of his works, consult Zahn, "Einige Worte zum Andenken an Hermann Hankel," in the *Mathematische Annalen* (Leipzig, 1874).

HANKEL, **WILHELM GOTTLIEB** (1814-90). A German physicist. He was born at Ermsleben and studied physics and chemistry at the University of Halle, where he later was appointed professor. In 1849 he became professor of physics at Leipzig and served there until 1887, when he was forced to give up active duties. He devoted himself to the study of thermoelectric properties of crystals and made many interesting discoveries in this field. Hankel's researches are published for the most part in Poggendorff's *Annalen* (Leipzig) and the *Berichte und Abhandlungen* of the Saxon Academy of Sciences. He also prepared a German edition of Arago's works, which was published at Leipzig (1854-60).

HAN-KIANG, hān'kyāng'. The name of several rivers of China, the most important of which is that which flows into the Yang-tse at Hankow (q.v.). It rises in the mountains in Shensi, known as Ta-pa-ling (sometimes also called Kintiao Shan, the 'mountain of nine ridges'), and flows east and south through the provinces of Shensi and Hupeh for a distance of about 1300 miles, for 1260 of which it is navigable in some degree. Its upper courses are through a mountainous region, and rapids are both numerous and dangerous. In certain seasons floods are common, the water rising in the narrower parts with great suddenness, sometimes to a height of 24 feet in as many hours. On such occasions the rapids are wiped out, and the river becomes a raging torrent. From Sinpuwan, the limit of navigation, to Tziyanghien (400 miles), only small boats can be used. At the latter place goods and passengers are transhipped to larger craft, subject to a second transshipment at Laohokou (400 miles) or Fancheng (450 miles) to the ordinary river junk of the Han. At Laohokou the country opens out, and for the remaining 460 miles to Hankow navigation is easy, though shallows and shifting banks abound. The traffic on the river is considerable, and with a little dredging it is capable of being used by steamers of light draft as far as Fancheng or Laohokou, the two most important trading centres on the river. Other cities besides those already mentioned are Hingan, a large walled city on the right bank, with a great military depot in the vicinity, and Siangyang (also on the right bank), a quiet walled city opposite Fancheng, both of which are noted for the long and stubborn resistance (1268-73) which they

offered to the Mongol armies of Kublai Khan. (Consult Yule-Cordier, *Marco Polo*, vol. II, London, 1903.) Prior to 1470 the river branched off from its present course about 3 miles above its present mouth, flowed through the plain behind what is now the foreign settlement of Hankow, and entered the Yang-tse some miles lower down. In that year it suddenly changed its course and poured its waters into the Yang-tse through its present channel.

HANKIN, hān'kin, **ERNEST HANBURY** (1865-). An English bacteriologist, born in Ware, Hertfordshire. He was educated at Merchant Taylors' School, at University College, London, St. Bartholomew's Hospital, and St. John's College, Cambridge, and worked under Koch in Berlin and with Pasteur in Paris. In 1892 he became chemical examiner and bacteriologist to Agra and Oudh in India, and he organized an important research laboratory in Agra. He did particularly valuable work on cholera and on the plague (which he thought was sometimes carried from rats by ants) and wrote on these subjects in technical journals. His *Cause and Prevention of Cholera* was printed at Allahabad in 13 languages. He also wrote *Animal Flight: A Record of Observation* (1913).

HANKIN, **ST. JOHN EMILE CLAYVERING** (1869-1909). An English dramatist, born at Southampton. He was educated at Malvern College and at Oxford University. Besides his contributions to *Punch*, the *Times*, the *Saturday Review*, and the *Indian Daily News*, he is author of *Mr. Punch's Dramatic Sequels* (1901) and *Lost Masterpieces* (1904). His plays include: *The Two Miss Wetherbys* (1903); *The Return of the Prodigal* (1905), his best-known production; *The Charity that Began at Home* (1906). *The Dramatic Works of St. John Hankin*, with an introduction by John Drinkwater, appeared in three volumes in 1912.

HANKOW, hān'kou' (Chin., Han-mouth). An important river port and commercial centre of China, situated in the very heart of the country, 600 miles from the sea, on the left bank of the Yang-tse, at the point where it is joined by the river Han in lat. 30° 32' N., long. 114° 19' E. (Map: China, K 5). It occupies the angle formed by the junction of these two rivers stretching along the east or left bank of the Han for over 2½ miles, and eastward along the left or north bank of the Yang-tse for 1 mile. Its streets are narrow, crooked, and dirty, and usually much crowded with the screeching, heavily laden wheelbarrows used in the conveyance of the enormous quantities of goods which here find their point of transshipment. Adjoining the native town on the east is the foreign settlement, originally a British concession, but thrown open to all foreigners by the British government shortly after the opening of the port in 1861. It extends along the Yang-tse for a distance of about 800 yards, a wide "bund," or esplanade, running along its entire length. It has fine streets, kept in splendid condition by a municipal council elected by the land renters. Ground rent is paid to the Chinese authorities through the British Consul. The houses and business buildings are substantial and are in marked contrast with those of the native town.

To the east of this lie the "concessions" more recently acquired by the French, Russians, and Germans, and the foreign water front has now a length of nearly 3 miles. Another new "concession" has been opened by the Chinese authori-

ties on the south or Wuchang side of the Yangtse, where foreigners may build business places and residences on certain conditions.

West of the native town, and across the Han, is the city of Hanyang, to which Hankow is subordinate, and directly across the Yangtse from Hanyang stands the large and imposing city of Wuchang, capital of the Province of Hupeh, and formerly the seat of the Governor-General (or Viceroy) of the two provinces of Hunan and Hupeh, unitedly known as Hu-kwang, or Liang Hu (i.e., the two Hu). These three centres of population are included in the port and customs district of Hankow, and, situated as they are in the centre of an unsurpassed network of rivers and lakes, they form the most important commercial centre of the country. Their total population is estimated at 1,500,000, of which Hankow has 826,000, or more than half.

Hankow is the first of the great commercial emporiums of the country. Its industries include cotton, hemp, and flour mills, a tannery, a mint, and ore-crushing works in Wuchang, an arsenal, iron and steel works in Hanyang, and down the river are great tanks for storing oil (capacity, 5000 tons), which is tinned on the premises. The mouth of the Han swarms with native shipping, and the scene presented everywhere is one of great commercial activity. Regular steam communication is maintained with Shanghai and the other river and lake ports both above and below Hankow, Ichang, about 500 miles above Hankow, being the limit of steam navigation westward. The largest ocean steamers come to Hankow and load at great hulks moored off the river bank. The Yangtse, opposite the foreign settlement, is 1400 yards wide from brink to brink. In winter its average low-water depth is 40 feet in mid-channel, but in summer, when the rivers are in flood, the swollen waters frequently rise 50 feet to the brink of the bund, sometimes overflowing it, inundating the town. To obviate this evil and to reclaim low-lying land near the city, an embankment was completed in 1905 from the Han River to Seven Mile Creek. The embankment is 13 miles long, and from 12 to 33 feet high. Fifty square miles of land have thus been reclaimed.

Net foreign imports, net native imports, exports, and total trade have been valued as follows in haikwan taels:

	IMPORTS		Exports	Total
	Foreign	Native		
1909..	37,788,240	15,300,625	72,147,825	125,296,690
1910..	37,802,574	14,414,844	83,081,740	135,299,167
1911..	33,906,394	9,916,543	74,074,547	117,957,484
1912..	40,204,778	12,122,964	82,704,437	135,032,179

The average value of the haikwan tael in 1909 was 63.4 cents; in 1910, 66 cents; in 1911, 65 cents; at the end of 1912 it was valued at 75.3 cents. The net importation of opium declined from 306 piculs in 1906 to 56 piculs in 1911. The principal export is black tea; other large exports are hides, beans, vegetable wax, cotton yarn, and raw silk. The leading imports include metals, machinery, and piece goods.

Hankow is one of the principal stations of the great trunk railway which is to connect Peking in the north with Canton in the south. The

Hankow-Peking section was opened in December, 1905, and is doing a large and expanding business. The Hankow station is a few miles below the foreign settlement, but a branch with the necessary stations runs to the Han behind the foreign settlements. Hankow and the neighboring cities were all but destroyed during the Taiping Rebellion. In 1911 the city was attacked by the revolutionists and partly burned. Yuan Shi-k'ai was sent by the Emperor to learn the extent of the damage. In 1912 the city was captured by the revolutionists and made the provisional capital. (See HANYANG and WUCHANG.) Consult: Seidmore, *China, the Long-lived Empire* (New York, 1900); T. R. Jernigan, *China in Law and Commerce* (ib., 1905); H. R. Burrill, *Report on Trade Conditions in China* (Washington, 1906); H. B. Morse, *Trade and Administration of China* (rev. ed., New York, 1913).

HANLAN, hān'lan, EDWARD (1855-1908). A Canadian oarsman. He was born in Toronto, Ontario, and at 16 years of age began to distinguish himself as an oarsman. In 1873 he rowed his first race in shells, beating two opponents. In August, 1876, he won the championship belt of the Toronto Rowing Club, and in September of the same year the single-scutt championship at the Centennial Regatta, Philadelphia, beating seven of the best-known oarsmen. The time of the final heat was 21.09 minutes, then the record for 3 miles with a turn. From 1876 to 1884 Hanlan was never beaten, except in 1880, when he retired at the stake boat on account of sudden illness due to a previous accident. During 1876-84 he won 15 races, gaining successively the championships of America, England, and the world, all of his opponents being of championship rank. In 1884 he went to Australia and was beaten by Beach. For some years he was coach to the crew of Columbia University, New York. He died in Toronto.

HANLE, hān'le, one of the highest inhabited places in the Ladak District, Kashmir, British India (Map: India, D 2). It is in lat. 32° 48' N. and is 15,075 feet above sea level. There is a Buddhist monastery. Some barley is raised in the valley, which is 8 miles long and incloses a lake.

HANLEY. A manufacturing town and municipal borough in Staffordshire, England, on the North Staffordshire Railway, and on a branch of the Trent and Mersey Canal, 2½ miles from Newcastle under Lyme (Map: England, D 3). It is known as the Metropolis of the Potteries and is famous for its manufactures of earthenware and fine porcelain. It has coal and iron mines, iron furnaces and foundries, and brickworks. The principal portion of the town is on an elevated site; the streets, wide and regular, are brick-paved, and there are many handsome residences. The chief buildings are the town hall, mechanics' institute, museum, infirmary, national and board schools. There is a fine park. The town owns an electric-light plant and maintains markets, baths, a cemetery, a free technical museum, and free libraries. It utilizes its sewage for the manufacture of fertilizers. Hanley's rise dates from the inception of the pottery industry. It has absorbed the former township of Shelton, and it received a municipal constitution in 1857. Pop., 1891, 55,000; 1901, 61,500; 1911, 66,255.

HANLIN-YÜAN, hān-lēn' yü-wān' (Chin., College of the Forest of Pencils). The National

Academy of China, membership in which used to be the highest literary honor China had to bestow on her scholars. It was founded by the Emperor Huan-tsung in 725, first as a coterie of scholars and poets whose society he courted, then as a learned body of copyists engaged in multiplying books. Loyang, in Honan, then the capital, was its home; since then it has shared the fortunes of successive dynasties and has been in Peking since 1403. During the "Boxer" trouble of 1900 its domicile was purposely burned. Its members were the historiographers of the country, the compilers of its great encyclopædias, editors and commentators of its classics, etc., and had charge of literary matters in general, or were drafted off to the provinces as superintendents of education, literary chancellors, etc. Its membership was made up of honor men at the triennial examinations at Peking. Consult Martin, *Hanlin Papers* (New York, 1880).

HANMER, SIR THOMAS (1677-1746). An English statesman and scholar. He was educated at Westminster and at Christ Church, Oxford, was elected several times (1701-27) to Parliament, and in 1713 became Speaker of the House of Commons. He retired from politics in 1727 and devoted himself to literature. He published (1743-44) an edition of Shakespeare, with illustrations by Gravelot—a work of no critical value, but of splendid typography. Pope, in the *Dunciad*, alludes to him under the name *Montalto* (bk. iv, 105).

HANN, HAN, JULIUS VON (1839-1921). A German physical geographer and meteorologist, born near Linz (Upper Austria). He was educated at the University of Vienna, became a lecturer there on meteorology in 1868, and in 1873 professor of physical geography. Having held a professorship at Graz from 1897 to 1900, he returned to Vienna in the latter year to occupy the chair of cosmic physics. In 1866 he established with Jelinek the *Zeitschrift der oesterreichischen Gesellschaft für Meteorologie*, and in 1877 was appointed director of the Central-Anstalt für Meteorologie und Erdmagnetismus of Vienna and elected to the Academy of Sciences. His researches dealing with such questions as the theory of storms, the decrease of temperature attendant upon increased elevation, and the violent south wind known to the Swiss as the foehn, are extensive. He retired from the directorship of the Central-Anstalt in 1897 and from his professorship in 1910. His publications include: "Astronomische Geographie und Physik der Erde," for the *Allgemeine Erdkunde* (4th ed., 1886) of Hochstetter and Pokorný; *Handbuch der Klimatologie* (3 vols., 1883; 3d ed., 1908-11); *Die Temperaturverhältnisse der oesterreichischen Alpenländer* (1887); *Lehrbuch der Meteorologie* (1901; 3d ed., 1914).

HANNA. The usual name in British Guiana for the boatzin (q.v.).

HANNA, MARCUS ALONZO (1837-1904). An American merchant and politician, born at Lisbon, Columbiana Co., Ohio, of Scottish-Irish parentage. In 1852 his father removed with his family to Cleveland, Ohio, where he established himself in a wholesale grocery business that soon became one of the most extensive in northern Ohio. Young Hanna was educated in the Cleveland public schools, and began a course at Western Reserve University, but, having been suspended in April, 1858, he was permitted to enter into business with his father's firm, and about

the time of his father's death, in 1862, he became one of the partners. In 1867 he and his brother-in-law, Robert R. Rhodes, became members of the new firm of Rhodes & Co., which was joined by Mark's youngest brother in 1875 and about the same time by another brother-in-law, James Ford Rhodes the historian. In 1885, the Rhodes brothers having withdrawn, the firm name became M. A. Hanna & Co. At first the business of the firm consisted chiefly in mining and selling coal, but, as its operations were developed, largely under Mark's initiative, it became a selling agency for coal, iron ore, pig iron, and a variety of other products; acquired an interest in numerous mines and furnaces; and established a lake transportation service with ships constructed in its own shipyards. Prior to 1880 the firm's business engaged nearly all of Hanna's activities, but subsequently he became actively interested in Cleveland newspapers, theatrical enterprises, and street railways, and in banking and railways. About the same time, too, he turned his attention to politics, gradually extending his influence from his home ward to city, State, and finally to national politics. In 1880 he was an active Republican worker in Cleveland; in 1884 he was a delegate to the Republican National Convention, and in 1888 he was again a delegate to that body, and this time made himself known as one of the managers of John Sherman's canvass for the nomination. In 1896 he suddenly acquired national prominence by the part he took in securing the nomination of William McKinley for the presidency at the Republican National Convention at St. Louis. Immediately after the convention he became chairman of the Republican National Committee and, conducting the campaign on the same principles that had won him success in business, secured the election of McKinley by the largest popular plurality given up to that time at a presidential election. In March, 1897, Governor Bushnell appointed him United States Senator from Ohio to succeed John Sherman, who had resigned to become Secretary of State in President McKinley's cabinet, and in the following year he was chosen by the Legislature Senator for the full term of six years. In the Senate he did not take a prominent part either as a debater or a legislator; but up to the death of President McKinley he was recognized as one of the most influential advisers of the administration, and in the Roosevelt administration he was a strong leader of the party favoring the Panama as against the Nicaraguan route for the interoceanic canal. Actively interesting himself in the problem of the relation between capital and labor, in 1901 he was made chairman of the committee of conciliation of the National Civic Federation, and in this capacity he was largely instrumental in effecting a settlement of the anthracite-coal strike in 1902. Consult Croly, *Marcus Alonso Hanna: His Life and Work* (New York, 1912).

HANNA, WILLIAM (1808-82). An English clergyman, author, and editor, born at Belfast. He studied at the universities of Glasgow and Edinburgh and was ordained a minister of the Church of Scotland. Upon the establishment of the Free church of Scotland in 1843 he, with his entire congregation, withdrew from the state church and formed, at Skirling, a Free church society. From 1850 to 1866 he was the colleague of Thomas Guthrie (q.v.) at St. John's Free Church, Edinburgh. He was appointed

editor of the *North British Review* in 1847, but soon resigned, and wrote numerous works, of which the *Last Day of Our Lord's Passion* (1863) had a wide circulation. He is, however, best known for his edition of *The Posthumous Works of Thomas Chalmers* (9 vols., 1847) and his *Memoirs of the Life and Writings of Thomas Chalmers* (4 vols., 1849-52).

HAN'NAHILL'. A local name for the black sea bass (*Centropristes striatus*). See SEA BASS.

HAN'NAY, DAVID (1853-). An English journalist and author, born in London. Besides work on the *Pall Mall Gazette*, the *Saturday Review*, and *St. James's Gazette*, Hannay wrote several books, mostly connected in some way with the navy: *Short History of the Royal Navy* (1898); *Admiral Blake* (1888); *Rodney* (1891); *Life of Marryat* (1889); *Life of Smollett* (1887). To the "Public Men of To-Day Series" he contributed *Don Emilio Castelar* (1896), and to the "Periods of European Literature," *The Later Renaissance* (1898), his most elaborate work in literary history. In 1913 appeared his *Naval and Sea Power*.

HANNAY, JAMES (1827-73). A British journalist and novelist, born at Dumfries, Scotland. He entered the navy in 1840, but five years later was court-martialed and dismissed from the service for writing satirically of his superiors. He then served as a reporter for the *Morning Chronicle*; worked on two short-lived comic papers, the *Passion* and the *Puppet Show*; and from 1860 to 1864 was editor of the *Edinburgh Evening Courant*. While British Consul at Barcelona (after 1868), he contributed a series of widely read letters to the *Pall Mall Gazette*, "from an Englishman in Spain." He wrote two naval novels, *Singleton Fontenoy* (1850) and *Eustace Conyers* (1855), which constitute his best work. He is also author of *Hearts Are Trumps* (1848); *King Dobbs* (1849; new ed., 1856); *Sketches in Ultramarine* (1853); *Satire and Satirists* (1854); *Sand and Shells* (1854); *Essays from the Quarterly Review* (1861); *Character and Criticisms* (1865); *A Course of English Literature* (1866); *Studies on Thackeray* (1866).

HANNAY, JAMES (1842-1910). A Canadian journalist and historian. He was born at Richibucto, New Brunswick, worked on newspapers in St. John while studying law, and, having been called to the bar (1867), was for six years official reporter of the Supreme Court of New Brunswick. He was afterward connected editorially with the *St. John Daily Telegraph* (until 1883), the *Montreal Daily Herald*, and the *Brooklyn Eagle*. In 1888 he became editor of the *St. John Gazette* and in 1893 editor of the *Telegraph*. He lectured frequently on historical subjects, was a notable editorial writer, contributed in prose and verse to magazines, and wrote much on Canadian history. His style is clear and graceful, and in general his attitude is impartial; but he betrays the bias of a loyalist in his treatment of the War of 1812. His narrative of Acadia under the French régime dispels much of the sentimental haze due to the poetized story of Evangeline. His principal publications are: *The Captivity of John Gyles among the Micmacs* (1875); *History of St. John* (1875); *History of Acadia* (1870); *New Brunswick: Its Resources and Advantages* (1902); *History of the War of 1812* (1905); *Wilmot and Tilley* (1907), in the "Makers of Canada Series";

History of the Queen's Rangers (1908); *History of New Brunswick* (1909).

HANNAY, JAMES OWEN ("GEORGE A. BIRMINGHAM") (1865-). An Irish novelist, born in the north of Ireland, the son of a Belfast clergyman. He was educated at Haileybury, England, and at Trinity College, Dublin, took orders, and became rector at Westport in 1892. In 1912 he was made a canon of St. Patrick's Cathedral, Dublin. In 1914 he visited the United States. His novels are in two classes—the one including such serious and penetrating studies of contemporary Ireland as *The Scething Pot* (London, 1905; New York, 1912), *Hyacinth* (1906), *The Red Hand of Ulster* (1912), and *Northern Iron* (1913); and the other embracing notably such stories and sketches of light and more or less fantastic comedy as *The Lighter Side of Irish Life* (1912), *The Major's Niece* (1912), and *Spanish Gold* (1911). His earlier novels introduce, incognito but easily recognizable, many Irishmen prominent in literature or politics, among them George Moore, Standish O'Grady, and Sir Horace Plunkett. Canon Hannay's serious work, a careful transcript of the actualities of Irish life, throws an interesting light upon the contemporary history of Ireland, and the irony, satire, drollery, fantasy, and extravagance of his lighter fiction afford a good quality of literary entertainment. In 1913 appeared his *Adventures of Dr. Whitty and Irishmen All*, the same year seeing the performance of *General John Regan* in London and New York; and in 1914 he published *The Bad Times and From Dublin to Chicago*.

HAN'NIBAL. A city in Marion Co., Mo., 120 miles by rail northwest of St. Louis, on the Mississippi River, and on the St. Louis and Hannibal, the Chicago, Burlington, and Quincy, the Wabash, and the Missouri, Kansas, and Texas railroads (Map: Missouri, E 2). It has steamboat communication with various cities on the river; a large trade in lumber, tobacco, flour, and agricultural produce, and manufactures of lumber, foundry products, wagons, scrubbing machines, scouring powder, woodenware, shoes, car wheels, cigars, cement, and lime. Among the features of the city are the public library, the Federal building, the city hall and other municipal buildings, the city hospital, the high-school building, Riverview Park (comprising 120 acres), St. Mary's Academy, and a long iron and steel railroad and wagon bridge across the river. Settled in 1819, Hannibal was incorporated as a town in 1830. The government is conducted under a charter of 1845, revised in 1873. The mayor, biennially elected, controls appointments to the administrative departments, those to the library board and finance committee alone being ratified by the council, which is unicameral. The school board is chosen by the people. The city owns and operates its water works and electric-light plant. Mark Twain lived here in his boyhood, and his home is the property of the city. Pop., 1900, 12,780; 1910, 18,341; 1914 (U. S. est.), 20,710; 1920, 18,950.

HANNIBAL (Phœnician, grace of Baal, Gk. *Ἀννίβας, Ἀννίβας*). A common name among the Carthaginians; the list of Hannibals famed in history extends to 14 or 15. The greatest of all was the Hannibal (c.247-c.183 B.C.) of the Second Punic War, the son of Hamilcar Barca. (See HAMILCAR, 7.) When he was nine years old, he accompanied his father on his Spanish expedition. Before starting he swore an oath of eter-

nal hatred to the Romans, which he kept through his life. After the death of Hamilcar he was employed by Hasdrubal, his brother-in-law, in most of his military operations. When Hasdrubal was assassinated (221), the army with one voice elected Hannibal commander in chief—an appointment which the authorities at Carthage at once ratified. Hannibal longed to strike a death blow at his country's rival by attacking her on her own soil. But before he entered on a task of such magnitude he deemed it prudent to complete the subjugation of Spain and accordingly spent two years in contests with some tribes hitherto independent of Carthage. Saguntum, a city in alliance with Rome, was attacked by him on the ground that its inhabitants were making aggressions on subjects of Carthage. After a siege of eight months the city was taken, and the Romans, after an embassy had unsuccessfully demanded the surrender of the general who had thus, they claimed, violated the existing treaty between Rome and Carthage, declared war in 218 B.C. Having taken measures for the defense of Africa and Spain during his absence, Hannibal started from New Carthage, in Spain, in 218 B.C., with 90,000 foot and 12,000 horse. This force was much thinned by his contests with the tribes between the Iberus and the Pyrenees, by the necessity of leaving Hanno with 11,000 men to keep those tribes in subjection, by desertion in the passage of the Pyrenees, and by his sending home a portion of his Spanish troops. His object in this last act was to inspire the remaining soldiers with thorough confidence in themselves and their general. From the Pyrenees he marched to the Rhone without opposition, since Scipio was at Massilia, four days' march from the point where Hannibal crossed the river in the face of the Celtic hordes who sided with the Romans. His next great difficulty was the passage of the Alps, which he effected in 15 days, in spite of the attacks of the mountain tribes, snows, storms, and other difficulties. Much discussion has taken place as to whether Hannibal crossed the Alps by the pass of Mont Genève or by the pass of Little St. Bernard, or by Mont Cenis. For the first route, Michelet, Thierry, and most French writers have argued; and for the Little St. Bernard Pass, Niebuhr, Arnold, Mommsen, and others; for Mont Cenis, Oslander, *Der Hannibalweg* (Berlin, 1900), and, in effect, Azan, *Annibal dans les Alpes* (Paris, 1902), and Wilkinson, *Hannibal's March through the Alps* (Oxford, 1911), who argue for the Col du Clapier, which is but a few miles southwest of Mont Cenis. For other recent discussions, consult: Fuchs, *Hannibals Alpenübergang* (Vienna, 1897); Marindin, in the *Classical Review*, vol. xiii (London, 1899); Fuegner, *Livius Hilfsheft* (Leipzig, 1901); Colin, *Annibal en Gaule* (Paris, 1904); Hesselmeier, *Hannibals Alpenübergang im Lichte der neueren Kriegsgeschichte* (Tübingen, 1906).

After allowing his army (now about 26,000 strong) some time to recruit in the rich villages of the friendly Insubrians, he first subdued the Taurini, a tribe hostile to the Insubrians, and took their chief city after a siege of three days, and thus forced into alliance with him all the Ligurian and Celtic tribes on the upper course of the Po. Scipio, having returned from Massilia, took the command of the army in the north of Italy and met Hannibal on the plain near the river Ticinus. The Romans were entirely

routed, and Scipio, who was severely wounded, retreated across the Po. The armies again met at the Trebia with a like result, though the Romans, who had received reinforcements, were much more numerous. These battles were fought in 218 B.C. Having wintered in the neighborhood of the Po and having levied additional troops among the Gauls, most of whom were now his friends, Hannibal started southward as soon as spring permitted, marching through Liguria and the swamps of the Arno. In this difficult route immense numbers of his beasts of burden and horses perished, and he himself lost the sight of one eye. He next inflicted a severe defeat, near Lake Trasimenus, on the consul Flaminius. After this victory he crossed the Apennines to Picenum and Apulia and thence recrossed to the fertile Campania, which he ravaged. Thither Fabius Maximus Cunctator was sent with an army to oppose him, but no general engagement took place, since the consul, playing for time in which Rome might recover from her reverses, endeavored to lead Hannibal into snares, which he succeeded in doing; but the Carthaginian extricated his army by a stratagem and returned to Apulia. He wintered at Cannæ and in June, or, according to others, in August (2) of 216 B.C., almost annihilated a Roman army of 90,000 men under Terentius Varro and Æmilius Paulus, in the battle which was fought a little below the town. (See CANNÆ.) About 50,000 are said to have fallen, including Æmilius Paulus and a host of Roman knights, senators, and other distinguished persons. Here Hannibal committed, in the opinion of some critics, the greatest military error of his life, in not marching direct to Rome; but it is supposed that he refrained in order to allow the tribes of Italy to declare in his favor. He needed, however, reinforcements, which the home government refused to send, and he lacked siege engines. Many in the south of Italy did attach themselves to his interests, but not in such numbers as he had anticipated. Indeed, it was the loyalty of the peoples of Italy to Rome that frustrated Hannibal's plans and nullified his victories. After some delay he marched on Neapolis (Naples), which he did not succeed in taking; but the gates of Capua were opened to him, and here he wintered. The enervating effect which the luxury of Capua is said to have had on his army has been greatly overdrawn; but his residence there forms, in one point of view, the turning point in the war, which from this time became more desultory in nature. Hannibal's great purpose was to arm the Italian nations against Rome and so to crush her power by means of her own subjects; the Romans, on the contrary, adopting at last the tactics of Fabius Cunctator, henceforth avoided coming to a pitched battle with the Carthaginians, but sought rather to keep the tribes in awe and to harass Hannibal and his lieutenants by small armies in different parts of the country. Hannibal traversed Italy in all directions, surprised the Roman generals, defeated their armies, and captured their towns, such as Casilinum, Arpi, Tarentum, Metapontum, Thurii, Locri, and many others; he defeated Sentenius near Capua, Cn. Fulvius at Herdonia, Fulvius Flaccus on the Anio, Crispinus and Marcellus in Lucania, and the besieging army before Locri. In all these cases the Roman armies were almost annihilated. However, the defeat of Hasdrubal, his brother, at the

river Metaurus, and the loss of his army (207 B.C.; see HASDRUBAL, 3), compelled Hannibal to confine himself to the mountainous peninsula of Bruttii, where for four years he resisted all the efforts of the Romans to dislodge him. At length, after having maintained himself in Italy for upward of 15 years, he was recalled to Africa, to defend his country against Scipio Africanus Maior; but, notwithstanding his utmost exertions and the bravery of his veteran troops, he was defeated by Scipio near Zama, with a loss of 20,000 men (202 B.C.). Peace was concluded in the following year (201 B.C.).

Hannibal's scheme of overthrowing Rome had been baffled, but his hatred of Rome was not diminished, and he set himself to make preparations for a still more deadly struggle. He turned his attention in the first place to political reforms at Carthage and made some constitutional changes by which he placed the finances of the city on a better footing. But his enemies accused him to the Romans of stirring up Antiochus the Great of Syria to make war on them, and when ambassadors came to Carthage, Hannibal fled to the court of Antiochus at Ephesus. In the war which followed he took no conspicuous part, but the King bitterly regretted afterward that he did not take the advice of Hannibal to carry the war into Italy. When peace was concluded, the surrender of Hannibal was one of the conditions; but, foreseeing such a result, he fled to Prusias, King of Bithynia, for whom he gained a naval victory over Eumenes, King of Pergamus. His surrender was at length demanded by the Romans, and, seeing no hope of escape, he took poison, which he always carried with him for such an emergency.

Our information about Hannibal is derived largely from Livy (books xxi-xxx), Polybius (books iii-xv), Plutarch, Appian, Cornelius Nepos, and Zonaras. Consult: Morris, *Hannibal* (New York, 1897); Dodge, *Hannibal* (Boston, 1891); Hennebert, *Histoire d'Annibal* (3 vols., Paris, 1870-91); Grassi, *Annibale giudicato da Polibio e Tito Livio* (Vicenza, 1896); How, *Hannibal and the Great War between Rome and Carthage* (London, 1899); Lehmann, *Die Angriffe der drei Barkiden auf Italien* (Leipzig, 1905).

HAN'NINGTON, JAMES (1847-85). An English missionary, first Bishop of Eastern Equatorial Africa, born at Hurstpierpoint, near Brighton. He was educated at Oxford and entered the ministry of the Established church. He offered himself to the Church Missionary Society and in 1882 went out to reinforce the missionaries already in Uganda; but his health gave way, and he was compelled to go back to England. Two years later he was consecrated Bishop of Eastern Equatorial Africa and started a second time for Africa. After having conquered the many obstacles and perils which he encountered in his attempt to reach the interior, he was murdered by the command of Mwanga, King of Uganda, near Lake Victoria Nyanza. Consult: his *Last Journals* (London, 1888); Dawson, *James Hanington, First Bishop of Eastern Equatorial Africa* (ib., 1887); Berry, *Bishop Hanington* (New York, 1908).

HAN'NO (Phœnician, merciful) (c.755-c.715 B.C.). King of Gaza (q.v.). He is called Hanunu, or Chanun, in the inscriptions of the Assyrian King, Tiglath-pileser III; and this name has been identified with that of the Carthaginian family, Hanno, who possibly were his

descendants. He was situated between Assyria and Egypt and in 732 rebelled against Tiglath-pileser, but fled without giving battle. Against Sargon II he allied himself with Sabaco (biblical So), King of Egypt, was defeated with him at Raphia (720), and carried into captivity.

HANNO. A common name among the Carthaginians. 1. The earliest of note who bore the name was a Carthaginian admiral who was sent on a voyage of discovery and colonization along the west coast of Africa, which he explored as far as the modern Sierra Leone, about 500 B.C. He founded a number of towns and on his return deposited an account of his voyage in the temple of Moloch at Carthage. This account was translated into Greek; and the translation, known as *Ἀννωνος Περιπλους*, or *Voyage of Hanno*, is still extant. There is an old English edition and translation by Falconer (London, 1797). Consult: Mer, *Mémoire sur le Périphe d'Hannon* (Paris, 1888); Bunbury, *History of Ancient Geography* (2d ed., vol. i, London, 1883); C. T. Fischer, *De Hannonis Carthaginiensis Periplo* (Leipzig, 1893); Illig, *Periplos des Hanno* (Dresden, 1899). 2. **HANNO** (?-264 B.C.). A Carthaginian admiral in the First Punic War. In command of a Carthaginian fleet, near Messana, Hanno allowed the city to fall into the hands of the Romans. He was recalled and executed. 3. **HANNO** (third century B.C.). A Carthaginian general, successor in command to the above. He was the son of a Hannibal; with Hiero II he besieged Messana, but was defeated by the consul Appius Claudius. 4. **HANNO** (c.300-c.250 B.C.). A Carthaginian general in the First Punic War. He was defeated near Agrigentum in 262. In 256, with Hamilcar, he was defeated in a naval battle off Enomus. 5. **HANNO THE GREAT** (c.275-c.195 B.C.). A Carthaginian politician. At the outbreak of the revolt of the Carthaginian mercenaries after the First Punic War, a revolt due to his activity in causing the government to deny to the soldiers the rewards promised to them by Hamilcar Barca (q.v.), he was put in command of the army, but was so badly defeated that Hamilcar was sent out to share the command with him. The two agreed so ill that the home government decided on a single command, but left the choice to the army in the field, which chose Hamilcar. Hanno tried to break down Hamilcar's power, after his death opposed intrusting the chief command to Hannibal, urged the surrender of Saguntum to Rome, and was head of the peace party. After Hannibal's defeat at Zama, Hanno was one of the commissioners who were sent to Scipio to sue for peace. At the close of the Second Punic War he became leader of the party which was friendly to Rome. 6. **HANNO** (latter half of third century B.C.). A Carthaginian lieutenant of Hannibal. He was in command of the left wing at the battle of Cannæ (q.v.), conquered several towns in Lucania and Bruttium, and was defeated by Tiberius Gracchus (214 B.C.) near Beneventum.

HANOI, hā'nô-é' (Chin. *Hô-néi*, within the river). One of the most important cities of Annam, capital of the Province of Tongking, and the seat of the government of French Indo-China (Map: French Indo-China, E 2). It is picturesquely situated in a region of lakes and trees, on the right bank of the Songkoi, or Red River, which rises in the Chinese Province of Yunnan, and enters the China Sea 110 miles below Hanoi. The native town lies between the

citadel and the river. The streets are fairly wide and the houses good, many of them being of brick and well built. Even the native city is well kept and clean. Summer begins in April and winter about October; the highest temperature is 35° and the lowest about 6° Centigrade. Since coming under French control the part nearest the water front has been much improved; new wide streets lined with trees have been opened, lighted with electricity. They have been given French names, and in this part the principal shops and hotels are found. There are two first-class hotels, a theatre, a museum, a hospital, and imposing official buildings and residences. French missionaries have long resided here, and a two-towered cathedral is a conspicuous feature of the landscape. In the middle of this newer part of the city is a small lake nearly half a mile square, containing little islands filled with pagodas and surrounded by promenades; and on the shore of Grand Lake, in the neighborhood of the city, is a Buddhist temple with a colossal bronze figure of Buddha. In the space near the water front is a bronze statue of Paul Bert, unveiled July 14, 1900. Hanoi was fortified by French officers at the beginning of the nineteenth century, but the defenses are now of little importance. The citadel, which stands on higher ground than the rest of the city, is a quadrilateral of 3600 feet to a side and is surrounded by a brick wall 12 feet high, and a deep moat. Within this inclosure are the palace, the royal pagoda, public offices and official residences, the treasury, court of justice, barracks, arsenals, magazines, etc. The old town lies between the citadel and the river. The principal trade is in silk and rice and is largely in the hands of the Chinese, and embroidery and pearl work form important industries. There are also a cotton-spinning mill, an ice factory, a match factory, a brewery, a paper factory, some furniture shops, and distilleries. The Songkoi is navigable at all seasons as far as Hanoi by vessels drawing 8 or 9 feet. Above that point the river is shallow, and there are many rapids, but flat-bottomed vessels drawing not more than 3½ feet can ascend quite a distance. Haiphong (q.v.) is the port of Hanoi, which is connected with it by rail as well as with Langson on the Chinese frontier. Several French periodicals and daily newspapers are published in Hanoi, and a new race course was opened there in 1890. The city is well supplied with drinking water from enormous water works. There are four lines of electric tramways, covering a distance of 8 miles. The railway from Haiphong to Hanoi was opened in 1902, and the Yunnan line was completed for the entire length in 1910. The transit trade is considerable. The population is estimated at about 110,000, of which 3000 are Europeans, exclusive of the military, and the rest Annamites, Chinese, Japanese, and Indians.

HANOTAUX, á'nó'tó', GABRIEL (1853-). A French historian and politician, born at Beaurevoir, Aisne. From being a specialist in paleography and modern history, he passed into the civil service (1879), as director of the historical department in the national archives, and became in 1881 subchief of Gambetta's cabinet and later chief of that of Jules Ferry. In 1885 he was counselor of Legation at Constantinople, and the following year he was elected deputy for Aisne. He served in the Chamber till 1887 and was mainly conspicuous for his opposition to Boulanger. He was appointed Director

in the Ministry of Foreign Affairs in 1892, and in May, 1894, became Minister of Foreign Affairs in the Dupuy cabinet, remaining in office through several changes of premiership, till October, 1895. In the Méline ministry (1896-98) he again held the portfolio of Foreign Affairs. He was one of the most ardent supporters of the policy that ended in the famous Franco-Russian alliance. In 1897 he was elected to the Academy. Among his published works are: *Origines de l'institution des intendants des provinces* (1884); *Henri Martin* (1885); *Études historiques sur le XVIème et le XVIIème siècle en France* (1886); *Le recueil des instructions données aux ambassadeurs à Rome* (1888); *Histoire du cardinal de Richelieu* (1893-96); *La France et la royauté avant Richelieu* (1898); *La Seine et les quais, Promenades d'un bibliophile* (1901); *Du choix d'une carrière* (1902); *Souvenirs de Mme. Maintenon* (1902); *La jeunesse de Balzac* (1904); *Histoire de la France contemporaine* (1903-09); *La France vivante en Amérique du Nord* (1913). Consult Jeanroy-Félix, *Autocritiques contemporaines* (Paris, 1905).

HANOTEAU, á'nó'tó', HECTOR (1823-90). A French landscape painter, born at Decize (Nièvre). At the École des Beaux-Arts, he was a pupil of Gigoux, and devoted himself chiefly to landscapes, characterized by sturdy realism and skillful color. The best known are "The Village Pond," "The Frogs," and "The Water Lilies," all in the Luxembourg. He is represented also in several French provincial museums. He received a first-class medal at the Paris Exposition of 1889 and the cross of the Legion of Honor in 1870.

HANOVER. A town in Grey Co., Ontario, Canada, on the Saugeen River, and on the Grand Trunk and Canadian Pacific railways (Map: Ontario, D 5). It possesses a public library, and its industrial establishments include eight furniture factories, a brickyard, cement works, a woolen mill, a flour mill, and a shirt factory. Pop., 1011, 2342.

HANOVER, Ger. **HANNOVER**, há-nó'vër. A former kingdom of Germany, constituting since 1866 the most northwestern province of Prussia (Map: Prussia, C 2). The North Sea and the Elbe River border the region on the north and northeast, the Prussian Province of Saxony and Brunswick on the east, the Prussian provinces of Hesse-Nassau and Westphalia on the south and southwest, and Holland lies on the west. Hanover is nearly cut in two by the Grand Duchy of Oldenburg. It embraces the old Brunswick-Lüneburg possessions, together with the principalities of Hildesheim, East Friesland, Göttingen, Osnabrück, etc. Area, 14,869 square miles.

Geographical Features. The general physical character of Hanover is that of an extended alluvial plain with slight undulations—the western continuation of the great low plain of northern Germany. In the south, however, the country is mountainous, embracing a considerable part of the western Harz (reaching a height of about 3250 feet), together with the lesser heights of the Eichsfeld and other mountain ranges. The mountains are covered with dense woods. The valleys between the mountains are fertile, with a good clayey loam, and well adapted to agriculture. Beyond the valleys, towards the north, the country is traversed from northwest to southeast by a sandy tract from 50 to 80 miles in width known as the Lüneburger Heide, which is

almost wholly unfit for agricultural purposes. Towards the northwest from the mountain region extend elevated levels, characterized by heaths and other dry areas. Great marshes, peat moors, "floating fields," cover the northwestern and extreme northern districts of the province. These sections have in some parts been successfully drained and fertilized and furnish good pasture; but a large portion is still unreclaimed, and is regarded as one of the least productive parts of Germany. The morass of Bourtange, on the borders of Holland, alone covers 500 square miles. The coast, partaking of the nature of the Holland coast, is low and requires protection from the overflowing of the "German Friesland," the land being in many localities below the level of the sea. Along the banks of the rivers and adjoining the dike-protected coast are very fertile and highly cultivated districts. The principal rivers are the Elbe, which receives several affluents from the southwest; the Weser, on whose affluent, the Leine, is situated the capital, Hanover, and among whose other tributaries are the Aue, the Emmer, and the Aller; the Ems; and the Vechte—all falling into the North Sea. The meridional direction of the Leine has given it the traffic between the Northern lowland and Thuringia and South Germany, and the crossing of this line by the Cologne to Berlin road has made Hanover one of the large centres of the kingdom. There are only two considerable lakes, the Dümmersee and the Steinhuder Meer.

Climate and Mineral Resources. The climate is damp near the ocean, where fogs and heavy winds are frequent; in the south it is drier and colder, being bleak in the Harz in winter. In the vicinity of the moors fevers are prevalent, and the mortality is high. The mean annual temperature is about 47° F. The mining industry is important, and is carried on mostly in the Harz region. The chief minerals are coal and iron. In 1912 the mining district of Clausthal produced 207,880 metric tons of coal, 1,132,496 tons of brown coal or lignite, and 906,132 tons of iron ore. Zinc, lead, and copper are also mined, while salt products are prominent. Turf and peat are large and important outputs, being shipped up the streams and canals towards the interior for use as fuel. Some mineral oil is found, the production amounting to 87,443 metric tons in 1912.

Agriculture. About one-third of the total area of the province is under tillage—farm and garden—a little over one-fifth is under pasture and meadow, and nearly one-sixth under forest. According to the census of 1907 there were 370,505 land holdings, with a total area of 7,210,177 acres. Of these, 219,185 holdings covered less than 5 acres each; 67,013, from 5 to 12½ acres each; 64,586, from 12½ to 50 acres each; and 19,721, over 50 acres each. In the drier regions of the country rye is the prominent crop; in the marsh and moor districts, wheat, oats, barley, buckwheat, rape, and potatoes are grown. Cattle raising is an important industry. For wheat and oats Hanover is one of the leading regions in Germany. In the mountain valleys the farming is intensive, and fruit is the leading product. The sugar-beet industry is rapidly growing. Clover, flax, and tobacco are raised.

Manufactures and Commerce. The manufacturing industries are prosperous and growing, especially in the southern part of the province. The industrial census of 1907 gives the number of mining and industrial establishments as

60,545, employing 146,580 persons. Among the chief manufactured products are cotton and woolen textiles, machinery, wagons, leather, glassware, cigars and tobacco, paper, chemicals, and spirits. Shipbuilding is a prominent industry. There are several chambers of commerce that actively further the interests of manufacturing and agriculture. The commerce is extensive, the city of Hanover ranking among the leading commercial towns of Prussia. In 1907 there were 35,108 commercial establishments, employing 81,770 persons. Trade is greatly facilitated by the numerous splendid waterways of the province, as well as by its ample roads and railways, the last exceeding 2000 miles in length and belonging for the most part to the state. The Province of Hanover has about 40 ports, of which six are important shipping centres, including Harburg and Geestemünde. In 1913 the Hanoverian shipping trade owned 967 sea-going ships of all kinds, which had, however, a light tonnage—45,786 tons net.

Government and Instruction. For purposes of administration Hanover is divided into the six counties of Hanover, Hildesheim, Lüneburg, Stade, Osnabrück, and Aurich, which are divided into 79 circles. The province is represented by 36 members in the Prussian Chamber of Deputies and by 10 in the Upper House. It sends 19 members to the German Reichstag. In educational matters Hanover holds high rank. Education is free, compulsory, and thoroughly diffused. There were 3624 public grammar schools in 1911, with 8586 teachers and 470,465 pupils. In 1913 there were 103 secondary schools (Gymnasias and Realschulen), with 28,971 pupils, and other schools of advanced instruction. There is also the famous university at Göttingen (q.v.). Among the practical schools are the royal mining academy in Clausthal, the building school in Nienburg, and the forestry school in Münden. There are a technical high school (in the capital), five navigation schools, several agricultural institutions, a school for the cultivation of meadows, a veterinary high school, and several unions for the diffusion of practical knowledge, as well as various associations fostering the interests of science, art, history, natural philosophy, engineering, and architecture. There are two large libraries—that of Göttingen University, and the Royal Library in the capital. The Royal Theatre of Hanover holds a creditable rank in Germany.

Population. The population of the province was 2,278,361 in 1890; in 1900, 2,590,939; in 1905, 2,759,245; in 1910, 2,942,436, of whom 85.1 per cent were Protestants, and 13.8 per cent Catholics. There were 1183 emigrants in 1912, nearly all to the United States.

HISTORY

The early history of Hanover is that of Brunswick. In 1235 Otho, the grandson of Henry the Lion, of the famous house of Guelph (Welf), was recognized as Duke of Brunswick by the Emperor Frederick II. On the death of Ernest the Confessor, Duke of Lüneburg, in 1546, his dominions were divided between his sons, Henry, who became the founder of the Brunswick-Wolfenbüttel line, and William, who founded the new line of Brunswick-Lüneburg. (See BRUNSWICK, HOUSE OF.) Several divisions were made among the members of this family, the most important of which occurred in 1635, when George, the son of

William, received the principalities of Calenberg and Göttingen and took up his residence in the city of Hanover. Duke George died in 1641 and was succeeded by his son, Christian Louis, who in 1648 succeeded to the possession of Lüneburg, transferring Calenberg to his brother, George William. In 1665 George William in turn secured Lüneburg, and Calenberg fell to the possession of his younger brother, John Frederick, who was succeeded by still another brother, Ernest Augustus, in 1679. This Prince introduced the law of primogeniture into the succession of the principality in 1683 and in 1692 secured the electoral dignity for his house from the Emperor Leopold I, becoming Elector of Hanover. He married Sophia, the daughter of Elizabeth, wife of the Elector Palatine, Frederick V, and the granddaughter of James I of England, thus connecting the Hanoverian house with that of England and Scotland. Their son, George Louis, succeeded his father in the Duchy of Calenberg and in the electoral dignity in 1698, and, by marrying his cousin Sophia Dorothea he united the two duchies of Calenberg and Lüneburg on the death, in 1705, of George William. In 1714, on the death of Queen Anne, George Louis, Elector of Hanover, ascended the throne of Great Britain as George I (q.v.), being the nearest Protestant heir, through his mother, the Electress Sophia. Till 1831 Hanover and Great Britain had the same sovereign. With George a brighter epoch opened for the inhabitants of Hanover, who were relieved from the burden of maintaining the court and ducal household, while the revenues of the crown were thenceforth appropriated solely to the general purposes of the state. Indeed it was claimed that George I and George II favored Hanover at the expense of England. The secularized sees of Bremen and Verden were obtained in 1715 by purchase from Denmark. George II, who succeeded in 1727, participated in the War of the Austrian Succession as an ally of Austria and an opponent of Frederick the Great. In the Seven Years' War, however, during which Hanover suffered materially at the hands of the French, who were the allies of Austria, he sided with Prussia. This King founded the University of Göttingen in 1734. The first 30 years of the reign of George III (q.v.) of England, who succeeded to the Electorate of Hanover on the death of his grandfather in 1760, contributed largely towards the prosperity of the electorate. Like the other states of northern Germany, Hanover profited by the increased English and American trade, for which the Hanoverian ports and rivers formed the regular channels of communication with the rest of Germany. In 1793-95 Hanoverian troops took part in the wars against the French Republic, but the expense of their maintenance was defrayed by England. Prussia occupied Hanover in 1801, but withdrew after a few months. In 1803, when war was renewed between France and England, Napoleon threw an army, under the command of Mortier, into Hanover, and the result of this measure was to compel the Hanoverian government to enter into a convention by which it bound itself to abstain from taking part against France during the pending war, to give up fortresses and munitions, to subsidize French troops, and to participate unconditionally in the general costs of the war. In 1807 Napoleon, after having ceded Hanover to Prussia and again withdrawn it, appropriated a portion of the electorate to complete the newly formed

Kingdom of Westphalia, which in 1810 received the whole of the Hanoverian territory. Later in 1810 a portion of Hanover was united with France and divided into the departments of Bouches de l'Elbe, Bouches du Weser, and Leine. After the expulsion of the French, Hanover was handed back to George III. Nov. 4, 1813. The Congress of Vienna raised Hanover to the rank of a kingdom and granted it important territorial additions in East Friesland.

In 1816 the Duke of Cambridge, brother of the Prince Regent of England, became Governor-General of Hanover; and in 1819 a new constitution was granted, providing for two representative chambers. The government remained largely autocratic, however, and the influence of Count Münster was paramount in Hanoverian affairs. Very little was done towards the improvement of the administration, and when William IV ascended the throne, in 1830, the general disaffection and distrust had risen to the highest pitch. The influence of the July revolution extended to Hanover, and in 1831 disturbances broke out at Osterode and Göttingen. These were speedily put down; but as the national discontent did not abate, Count Münster was dismissed, and the Duke of Cambridge, who had hitherto acted as Governor-General, was invested with the title of Viceroy and intrusted with very extensive powers. The Estates were convoked, and in September, 1833, a new organic instrument was promulgated. The death of William IV, in 1837, placed Hanover under the rule of the next male heir, Ernest Augustus, Duke of Cumberland, son of George III, as by Hanoverian law succession to the throne was denied to a woman. Chagrined by the loss of the crownland, one of the first measures of the new King was to abrogate the constitution of 1833 and to restore that of 1819. In consequence of their refusal to take the oath of allegiance required from all persons holding office under the state, seven of the professors at Göttingen, among them Dahlmann, Ewald, Gervinus, and the brothers Grimm, were expelled from the university. In 1840 a new and autocratic constitution was promulgated. From this period till 1848, when the success of the French Revolution compelled the German rulers to adopt a more liberal policy towards their subjects, the King showed himself resolutely averse to reform, though the Hanoverian people themselves were strongly in favor of the constitution of 1833. Only the danger of a revolution in 1848 forced the King to grant a constitution more liberal in nature than even that of 1833. The danger once over, however, he reverted to his former policy and dismissed his liberal ministry. A revolution was prevented by his death in 1851. Ernest Augustus was succeeded by his son, George V, who, though blind, was an active and energetic upholder of the royal power and chose a ministry that adhered to the aristocratic ideas. In 1854 Hanover joined the German Zollverein. In 1855 the constitution underwent various modifications in accordance with the demands of the federal Diet, by which it was made to approximate more closely to that granted by Ernest Augustus in 1840. Although the changes were unpopular, they met with no energetic opposition. In the war of 1866 Hanover threw in her lot with Austria, and in June the kingdom was occupied by Prussian troops, and on the 28th of that month the Hanoverian army was forced to capitulate. By the Peace of Prague the incorporation

of Hanover with Prussia was recognized. Both George V, who died in 1878, and his son, Ernest Augustus, Duke of Cumberland (q.v.), refused to acknowledge the act of annexation and went into exile. On this account their private estates in Hanover were sequestered by Prussia, the proceeds being denominated the Guelph Fund (q.v.). The Hanoverian deputies kept up a constant protest in the Reichstag against the annexation, but finally, in 1892, Ernest Augustus renounced any intention of intriguing against Prussia, and the income of the Guelph Fund was handed over to him. The bitterness between the Guelphs and the reigning house of Prussia, the Hohenzollerns, was practically dissolved by the marriage of the Kaiser's daughter, Victoria Louise, to Ernst Augustus, son of the Duke of Cumberland, in 1913. The Kaiser and the Bundesrat did not require a formal renunciation of the claims of the house of Cumberland to the Hanoverian throne when Ernst Augustus became Duke of Brunswick, and the reconciliation appears complete.

HANOVER. The capital of the Prussian Province of Hanover (q.v.), formerly the capital of the Hanoverian kingdom, situated in a low, level region, on both sides of the Leine, which here becomes navigable, in lat. 52° 22' N. and long. 9° 45' E. (Map: Prussia, C 2). Its area is over 16 square miles. The mean annual temperature during the 50 years, 1851-1900, was 47.5° F.—January 32.9°, July 63.3°; average rainfall, 23.5 inches.

Hanover is composed of the Altstadt (old town), the Aegidien-Neustadt, the Calenberger-Neustadt (dating from the thirteenth century), inclosed by the Leine and its little tributary the Ihme, and a number of suburbs. The town of Linden lies beyond the Ihme. Numerous river bridges facilitate the communication between the various sections of the city. The environs abound with spacious parks and promenades which ennoble the city and justify its fame for dignified beauty. The Eilenriede—the city forest—adjoins the town on the east and contains the zoological gardens. The magnificent wide Lindencallee, about 1½ miles long, is celebrated, as well as the Grosse Garten, laid out by Le Nôtre and richly adorned with statues, etc. The Herrenhausen Castle, with its parks, its great fountain, and its rare collection of palms, is visited by all tourists, as is also the fine adjacent mausoleum containing monuments to Ernest Augustus and his Queen, by Rauch. In the oldest portion of Hanover are found many houses dating from the fifteenth and sixteenth centuries, with stucco façades. The newer parts of the city are generally modern in appearance, being handsomely built of stone and brick and profusely adorned with monuments, fountains,

etc. Among the conspicuous recent edifices are the magnificent municipal buildings, such as the railway station and the new Rathaus. The most venerable church in Hanover is the fourteenth-century brick Marktkirche, situated in the centre of the old town. It has a tower 300 feet high and contains some fine stained glass and a carved altar. The Gothic Aegidienkirche, dating also from the fourteenth century, with a Renaissance tower, the modern Christuskirche with its fine stained glass, the Roman Catholic Marienkirche, and the old Nikolaikapelle are the other noteworthy ecclesiastical edifices. In the churchyard of the Gartenkirche lies buried Goethe's famous Lotte (Charlotte Kestner), whose family has long been identified with Hanover.

Among the secular buildings the most prominent are the Royal Palace, originally constructed in the seventeenth century and rebuilt in 1817, with its majestic colonnade, its fine chapel containing a beautiful altarpiece by Cranach, and interesting frescoes; two other royal palaces associated with the history of the reigning families of Hanover and England, one of them the old palace of George V, which was the favorite palace of George I and George II of England, and is now used as a town hall; the splendid old late-Gothic Rathaus, built in 1430-55 and recently restored, with a frescoed Ratskeller by Schaper, and a bronze Gothic fountain in front; the Royal Theatre, completed in 1853, with an attractive façade decorated with statues of famous dramatists and composers and, in the foreground, a statue of Marschner, formerly conductor of the Hanoverian Royal Orchestra; the provincial museum; the Kestner Museum; and the barracks, situated on the Waterlooplatz. This square is adorned by the Waterloo Column, surmounted by a figure of Victory, erected in 1826-32 in honor of the Hanoverians who fell at La Haye Sainte. Among the numerous monuments in the city are the fine bronze equestrian statues of King Ernest Augustus, by A. Wolff; the imposing war monument (one of the best in Germany), by Voltz, dating from 1884, with symbolic figures of Germania and Hanover; and Dörmeyers' famous artistic "Goose-Girl Fountain." Another object of interest is Leibnitz's house, recently restored by Haupt.

The city is a well-known educational centre, and a favorite place of residence for foreign families, who are attracted not only by the pleasant and quiet charm of the capital, but by the purity of the German spoken there. The educational establishments comprise a school of technology (one of the five in Prussia), having various interesting collections, and an attendance of 1796 in 1913; a veterinary high school (one of the two in Prussia), founded by George III of England in 1778; several seminaries for teachers; a decorative art high school; and a number of lyceums and military and industrial schools. The Royal Library contains over 200,000 volumes and 3500 manuscripts. The municipal library is also rich in manuscripts. The new provincial museum has among its various treasures an important collection of pre-Christian antiquities, two picture galleries of minor interest, including both ancient and modern canvases, and some statuary by Canova and Rauch. The Kestner Museum contains Egyptian and Roman antiquities, old manuscripts and incunabula, the famous Eulemann collection, paintings, miniatures, etc. The Royal Theatre, with seats for

1800, is one of the leading theatres of Germany of the second rank. There are two good private theatres. The city has a celebrated military riding school, and numerous scientific, historical, art, and art-industrial organizations, as well as important hospitals and charity homes.

The city, as the capital of the Province of Hanover, is the seat of the presidency and the higher courts. The administration of the city is in the hands of a director, a syndic, an executive board of 17 senators or magistrates, and a municipal council of 24 members. The city is lighted by electricity, has an electric street railway, good water works, and owns a market and a slaughterhouse. In the fiscal year ending March 31, 1913, the proceeds of direct and indirect taxes amounted to 11,577,000 marks. At the end of the year the municipal debt amounted to 77,530,000 marks, or \$18,542,000.

The industrial importance of the city has been greatly increased in late years by reason of the improvement in its railway connections. It is now a railway and a manufacturing centre. Among the larger industrial establishments are an oilcloth factory, a railway repair shop, a number of machine shops, iron foundries, iron-bridge works, piano factories, and chemical works. There are also produced lacquer ware, oilcloths, books, lamps, liquors, and asphalt. Leather is an important output. The trade, which is of considerable magnitude, is actively promoted by a number of prominent commercial, agricultural, and manufacturing associations, banks, and other institutions of credit. The city is the seat of the leading industrial provincial organizations. The population of Hanover proper was 163,593 in 1890, 235,649 in 1900, and 302,375 in 1910. It is the twelfth city in size in Germany and the seventh in Prussia. In 1913, for the purposes of taxation, the population of the city was officially estimated at 312,919. Nearly all the population is Protestant.

History. Hanover originally was a little fishing town, and nothing is known of it worth recording until 1203, at which time Henry, the son of Henry the Lion, Duke of Saxony, received it with his share of lands left by his father. He soon handed it over to his nephew Otho, the founder of the house of Brunswick. From Duke Otho, Hanover received in 1241 a municipal charter, and soon after it joined the Hanseatic League, in which, however, it played only a minor rôle. Its importance rose after 1636, when it became the residence of one line of Brunswick dukes. (See **HANOVER**, Province.) In 1714, however, the Elector of Hanover became King of England, and until 1837 the city was a monotonous provincial town. Upon the death of William IV of England, Ernest Augustus, Duke of Cumberland, the new King of Hanover, took up his residence here. In 1866 the Kingdom of Hanover was annexed to Prussia, and since then the city has been the capital of the Prussian province of the same name. Hanover has grown rapidly in recent years and is more prosperous under Prussian rule than it ever was as the capital of an independent kingdom. Consult: Hoppe, *Geschichte der Stadt Hannover* (Hanover, 1846); Hartmann, *Geschichte der Residenzstadt Hannover* (Hildesheim, 1886); Hirschfeld, *Hannovers Grossindustrie und Grosshandel* (Leipzig, 1891).

HANOVER. A town in Grafton Co., N. H., 55 miles northwest of Concord, on the Connecticut River, opposite Norwich, Vt., with which it

is connected by a bridge (Map: New Hampshire, E 51). It is the seat of Dartmouth College (q.v.) and has the Mary Hitchcock Memorial Hospital. There are minor manufactures, but the town is interested mainly in agriculture, dairying, and lumbering. Pop., 1900, 1884; 1910, 1340.

HANOVER. A borough in York Co., Pa., 19 miles southwest of York, and 54 miles north-northwest from Baltimore, Md., on the Pennsylvania and the Western Maryland railroads (Map: Pennsylvania, H 8). It is in a productive agricultural region which also has iron-ore deposits and is of considerable commercial and industrial importance, its manufactures including cigars, gloves, silks, flaxine, water wheels, flour, shirts, shoes, machine-shop products, furniture, wire cloth, and ironstone grinders. The borough contains a public library, a fine high-school building, and two city parks. Settled about 1730, Hanover was incorporated in 1815. It is governed by a burgess, elected every four years, and a borough council. Here, on June 30, 1863, the Union forces under Kilpatrick met the Confederate forces under Stewart, and a skirmish ensued on the main streets. Pop., 1900, 5320; 1910, 7057.

HANOVER COLLEGE. An educational institution, situated at Hanover, Ind., chartered as an academy in 1825 and as a college in 1833. It is affiliated with the Presbyterian church and since 1880 has admitted women. The number of students was, in 1914, 224 in regular collegiate standing and 64 special students. At the same time the college had a library of 23,000 volumes, an endowment of \$325,000, grounds and buildings valued at \$175,000, and an annual income of \$24,500. No tuition fee is charged. The college provides a general liberal-arts course leading to the A.B. degree. The president in 1914 was William A. Millis, LL.D.

HANOVER COURTHOUSE, BATTLE OF. An engagement fought at Hanover Courthouse, 17 miles north of Richmond, Va., on May 27, 1862, between a part of the Federal Army of the Potomac under Gen. Fitz John Porter and a Confederate brigade under General Branch, the latter, after offering a stubborn resistance, being driven from the field. The Federals lost 355 in killed, wounded, and missing; the Confederates 265, and about 730 prisoners, of whom 150 were also wounded. Consult *Battles and Leaders of the Civil War*, vol. ii (New York, 1887).

HANOVER SQUARE. A London square, laid out in 1731. Near it stands St. George's Church, the scene of the most fashionable London weddings.

HAN'SA, THE. See **HANSEATIC LEAGUE.**

HAN'SARD. A name well known in connection with the printing of the British parliamentary records. The first of the family was Luke Hansard (1752-1828), who was born in 1752 at Norwich and, coming to London, worked for some years as compositor in the office of Hughes, the printer to the House of Commons; in 1774 he and Hughes entered into a partnership, and in 1800 he succeeded Hughes as sole proprietor of the business, which until 1891 was still carried on by his family.

The name of Hansard is connected with an important question of parliamentary privilege. The case was briefly as follows: A bookseller named Stockdale brought an action for libel against the Hansards, the libel consisting of

statements in the parliamentary reports which the latter had printed, and Lord Chief Justice Denman decided in favor of Stockdale. This decision seemed to violate the clause in the Bill of Rights that "debates and proceedings in Parliament ought not to be impeached or questioned in any court or place out of Parliament." A committee of the Commons reported that Parliament and each House had a right to authorize the publication of such matter as it believed to be for the public good, and further that to call this right in question was contrary to law and a breach of privilege of the House. The right to publish must necessarily carry with it the right to protect the publishers. So the struggle began, and, before it ended, the sheriff who served the decrees of the courts, the attorneys of Stockdale, as well as Stockdale himself, and many others, were imprisoned by the authority of the Commons. On the other hand, the property of the Hansards was seized under the decrees of the court. After three years of strife and debate Parliament ended the anomaly of a conflict between the two departments of government and also did away with the antiquated methods of parliamentary redress, by enacting a law that any proceedings against persons for publication of papers printed by order of either House of Parliament are to be stayed by the courts of law, upon delivery of a certificate and affidavit that such publication is by order of either House.

The Hansards are most widely known by the reports of the debates in Parliament, a branch of the business which was established by Thomas Curson Hansard (1776-1833), son of Luke Hansard, in 1803. The accuracy of these reports is rarely questioned. They were not, however, prepared by shorthand reporters employed by the Hansards, but were compiled from the reports in the London newspapers, and then submitted to the speakers for correction. The speeches as they appear in Hansard are not, therefore, in all cases the spoken words, but frequently are the product of the closet, the reviser inserting in many cases what he intended to say, or wished he had said, and omitting the heated passages, the utterance of which he regretted. Cobbett's—often called Hansard's—*Parliamentary History* (1806-1803) in 36 volumes furnishes the most complete available record of its proceedings during these centuries. From 1803 to 1891 the Hansards published the debates of Parliament in three series: (1) 1803-20, in 41 volumes; (2) 1820-30, in 25 volumes—an index of the whole forming an extra volume; (3) 1830-91, in 356 volumes. From 1891 to the present the debates—often still referred to as Hansard Debates—have been published by other houses. The fourth series comprises 199 volumes, and in 1914 there were of the fifth series 60 volumes of the House of Commons and 15 volumes of the House of Lords.

HANSARD. See HANSEATIC LEAGUE.

HANSEATIC CODE. See HANSE TOWNS, LAWS OF THE.

HANSEATIC LEAGUE, or HAN'SA, THE (from OHG. *hansa* [*hansel*], Goth. *hansa*, AS. *hōs*, league). A union established in the thirteenth century by some of the cities of northern Germany for their mutual safety and for the protection of their trade. This union grew out of associations of German merchants organized abroad. In order to travel and trade with greater security, these had long been accustomed to band themselves together into companies, and

through such associations had secured privileges in certain cities, notably in London, Novgorod, Bergen in Norway, Bruges, and Visby in Gotland, off the coast of Sweden. In London the merchants of Cologne had obtained a letter of protection as early as 1157, and other German merchants who resorted to London joined the Cologne Hanse. When Lübeck, in the thirteenth century, began to threaten the supremacy of Cologne, the merchants of the latter city endeavored to exclude the men of Lübeck from trading in England. Possibly this opposition was influential in causing Lübeck to seek allies to strengthen its position. In 1241 she entered into a treaty with Hamburg for the mutual protection of the commercial highway between the two cities. This alliance, which is often regarded as the origin of the Hanseatic League, resulted in putting the control of commerce in the Baltic and the North seas into the hands of the merchants of Hamburg and Lübeck. In 1259 Lübeck, Rostock, and Wismar formed an alliance against pirates on the sea and robbers on land. In 1266 and 1267 the merchants of Hamburg and Lübeck were allowed to form separate hanses at Lynn, England. In 1285 the five Wendish cities of Lübeck, Wismar, Rostock, Stralsund, and Greifswald waged war against King Eric of Denmark and secured from him certain privileges. Before the end of the thirteenth century Cologne had been forced to take a subordinate position, and Lübeck was the recognized leader.

In the thirteenth century there were several instances of alliances formed between different groups of cities. These allied cities gradually found it advantageous to join the Lübeck union, which was constantly becoming more powerful. In 1343 it was officially designated as The Hansa. In 1362 the allies began a war against Waldemar IV of Denmark, who had attacked Visby in 1361; in 1367 the number of allied cities was so great that in 1370 Denmark was compelled to conclude a treaty with the "seventy-seven hansen," in which the latter were guaranteed freedom to trade and an indemnity for the losses which they had suffered. In addition it was agreed that no one in the future should receive the Danish crown without the advice of the cities and without the confirmation of the privileges of the Hanseatic League.

The entire league, which at one period embraced at least 85 towns, and included every city of importance between the Netherlands and Livonia, was divided at first into three, and later into four, classes, or circles: (1) the Wendic cities of the Baltic; (2) the towns of Westphalia, the Rhineland, and the Netherlands; (3) those of Saxony and Brandenburg; (4) those of Prussia and Livonia. The capitals of the respective circles were Lübeck, Cologne, Brunswick, and Danzig.

The professed object of the league was to protect the commerce of its members by land and by sea, to defend and extend its commercial relations with and among foreigners, to exclude as far as possible all other competitors in trade, and firmly to maintain, and, if possible, to extend, all the rights and immunities that had been granted by various rulers to the corporations. For the promotion of these ends, the league kept ships and armed men in its pay, the charge of whose maintenance was defrayed by a system of taxation and by the funds obtained from the money fines which the Diet levied for infringe-

ments of its laws. In its factory at Bergen in Norway only unmarried clerks and serving men were employed, and an almost monastic discipline was enforced; but the by-laws of the league prescribed a system of daily sports and light occupations for the recreation of the men, while judicious regulations for their comfort and cleanliness, and for the celebration of festivals at certain fixed times of the year, bear evidence of the sound sense that influenced the mode of government of the Hansa. This was further shown by the injunction to the masters of its factory to avoid everything that could hurt the prejudices of the foreigners among whom they were placed, and to conform in all things lawful to the habits of the country. At the Steelyard in London, where a German hanse was established as early as 1250, the regulations were similar in their severity to those of Bergen, and probably the customs at other factories were not far different.

For many years the Hanseatic League was the undisputed mistress of the Baltic Sea and the North Sea. It created new centres of trade and civilization in numerous parts of northern Europe and contributed to the expansion of agriculture and of the industrial arts by the construction of canals and roads. It carried on trade with every European country. The greatest powers dreaded its hostility and sought its alliance, and many of the powerful sovereigns of the Middle Ages were indebted to it for most substantial benefits.

The league reached its culminating point in the fifteenth century. Its decline was rapid. In proportion as the seas and roads were better protected by the states which now arose in Europe with the passing of the old feudal anarchy, and as rulers learned to comprehend the true commercial interests of their dominions, the power of the Hansa declined. The discovery of America and of the new sea route to India gave an entirely different direction to the trade of Europe. The herring fisheries, which had formed one great source of their wealth, were lost before the middle of the fifteenth century, as the herring deserted the Baltic for the coast of Holland. The Hansa had, moreover, arrogated to itself, in the course of time, the right of imposing the greater and lesser ban, and of exercising other acts of sovereignty which were incompatible with the supremacy of the rulers in whose states they were enforced. Hence the league was necessarily brought into frequent hostile collision with the local authorities. In accordance with their narrow commercial policy, the Hansards refused to grant to merchants trading in foreign parts the same privileges in the Hanseatic cities which they themselves had enjoyed for centuries in England, Russia, and Scandinavia, and hence arose dissensions, which not unfrequently ended in a fierce maritime warfare. By way of retaliation for the pertinacity with which the league refused to grant to the English the same immunities which had been accorded to traders of other nations, the English Parliament required that Germans should pay the tax on wool and wine which was exacted from all other foreigners in the English markets; this led to conflict and the Hanse cities would probably have lost all they possessed in England if their cause had not been advocated by Edward IV, who had more than once been indebted to them for money and aid, and who in 1474 secured for them, by a clause in the Treaty of

Utrecht, a restitution of nearly all their former rights in England. By 1589 their obstinacy in insisting upon the maintenance of their old prerogatives, notwithstanding the altered condition of the times, drew upon them the anger of Queen Elizabeth, and there was general satisfaction when Drake and Norris seized upon ships of the Hansa, 61 of which were captured. In 1598 Elizabeth banished the Hansards from their factory in London. These measures had the desired effect of compelling the league to receive English traders on equal conditions, and thenceforward the Hansards were permitted to occupy the Steelyard, as before. The Hansa had, however, outlived its usefulness, and at the Diet held at Lübeck, in 1630, the majority of the cities formally renounced their alliance. Hamburg, Lübeck, Bremen, and for a short time Danzig, remained faithful to their ancient compact and continued to form an association of free republics, which existed unchanged until 1810, when the first three were incorporated in the French Empire. In 1815 they became members of the German Confederation. By a convention concluded in July, 1870, the powers and privileges of the three free towns were reestablished and reorganized, and under the new German Empire they still retain their self-government and are still known as *Hansestädte*. Consult: Sartorius, *Geschichte des hanseatischen Bundes* (3 vols., Göttingen, 1802-08); Barthold, *Geschichte der deutschen Hansa* (3 vols., Leipzig, 1802); *Hanseisches Urkundenbuch* (10 vols., Halle, 1876-1907); *Hanseische Geschichtsblätter* (10 vols., Leipzig, 1872 et seq.); *Hanseische Geschichtsquellen* (10 vols., Halle, 1875-1906); *Hanseische Reccesse* (23 vols., Leipzig, 1870-1910); Daenell, *Die Blüthezeit der deutschen Hanse* (2 vols., Berlin, 1905-06); Lindner, *Die deutsche Hansa* (Leipzig, 1911); Helen Zimmern, *The Hansa Towns* (New York, 1889).

HÄNSEL UND GRETEL. An opera by Humperdinck (q.v.), first produced in Weimar, Dec. 23, 1903; in the United States, Oct. 8, 1895 (New York).

HANSEMANN, hân'ze-mân, DAVID JUSTUS LUDWIG (1794-1864). A German publicist and statesman, born at Pinkenwerder, near Hamburg. He set up as a wool dealer at Aix-la-Chapelle in 1817 and, after having attained considerable reputation in commerce and through railway construction, was elected a deputy in the Provincial Diet of Rhenish Prussia in 1845. In 1847 he was elected a member of the United Diet, in which he became conspicuous as a leader of the Liberal Opposition, and in 1848 he was for a brief period Prussian Minister of Finance. He was the founder of the Diskontogesellschaft of Berlin, one of the most important financial institutions of Germany. His published works deal with economic and political topics of his time, and include *Preussens wichtigste Eisenbahnfrage* (1837) and *Das preussische und deutsche Verfassungswerk* (1850).

HANSEN, hân'zen, ADOLF (1851-). A German botanist, born and educated at Altona, Prussia. He became director of the botanical gardens of the University of Giessen. His best-known research was his minute study (in the eighties) of the yeasts used in brewing and his proof that the presence of many varieties of yeasts produced certain faults or diseases in the brew. He published: *Farbstoffe der Blüten* (1881); *Ernährung der Pflanzen* (1885); *Pflanzen-Physiologie* (1891); *Der Zellenbegriff*

(1897); *Die Entwicklung der Botanik seit Linné* (1902); *Haeckel und Herder* (1907); *Religion und Naturwissenschaft* (1908).

HANSEN, hân'sên, EMILE CHRISTIAN (1842-1909). A Danish botanist, born at Ribe, Jutland. Beginning life as a house painter, he later studied art and the natural sciences. In 1866 he obtained a scholarship at the University of Copenhagen and served as an instructor in the Gymnasium and later as head of the physiological laboratory at Carlsberg. He became an authority on plant physiology, especially on fungi and alcoholic fermenting yeasts. In 1887 he devised with Professor Kühle a new ferment now used in many European breweries. His publications include *Untersuchungen aus der Praxis der Gärungsindustrie* (2 vols., 3d ed., 1892-95) and *Gesammelte theoretische Abhandlungen über Gärungsorganismen*, edited by A. Klücker (1911).

HANSEN, hân'sên, GERHARD HENRIK ARMAUER (1841-1912). A Norwegian physician, born at Bergen. He is known chiefly as the discoverer of the bacillus of leprosy. He received his early education in the cathedral schools of his native city and on the completion of his medical studies became resident physician in the Rigshospital of Christiania. Later he spent some time as medical officer at the great Lofoten fisheries. In 1868 he was made assistant medical officer to the Bergen Leper Hospital, of which Danielssen was director. It was under the influence of this teacher that Hansen began his lifelong study of leprosy. Hansen's first investigation was to work out the significance of the "leper cells" of Virchow. After more study in various universities he returned to Norway to resume his investigations of leprosy. His researches pointed to the contagious and specific nature of the disease, and in recognition of the value of his work, the Medical Society of Christiania voted a sum of money to enable him to continue his studies. In his journeys about the country he came across instances of the disease which were explainable only by the theory of contagion. The conclusions at which he thus arrived conformed with those of Drogat-Landré, who had studied leprosy in Surinam, and who had published his views in 1869. Hansen's further labors were rewarded by the discovery of a bacillus in unstained preparations. Later the microorganism was stained and became known as Hansen's bacillus. This was in 1873. Subsequently Hansen for years tried to cultivate and inoculate the leprosy bacillus, but his efforts were unsuccessful. Nevertheless legislation called forth by Hansen's proof of the contagious nature of leprosy has effected a marked diminution of the disease throughout Norway and elsewhere. His distinguished work was recognized at the International Leper Congress held at Bergen in 1909.

HANSEN, HANS CHRISTIAN PETER (1840-1905). A Danish critic, born at Copenhagen. Noted as a journalist and critic, he became editor of *Nær og Fjern* (1872-80), a high-class newspaper, afterward called *Illustreret Tidende*, which he also edited from 1880 to 1884. He made a Danish rendering of Goethe's *Faust* (1881-89), and his original publications include a romance, *Kristian Kjøbenhavn* (1882), an illustrated history of Danish literature, *Illustreret dansk Literaturhistorie* (1880; 2d ed., 1902), and *Illustreret dansk Teaterhistorie* (Copenhagen, 1896).

HANSEN, hân'sên, MAURITZ CHRISTOPHER (1794-1842). A Norwegian poet and novelist, born at Modum. He was a teacher, and prepared many textbooks, but is best known by his numerous novels. He was Norway's first Romanticist and shows the influence of Fouqué. His novels were the first accurately to describe the life and surroundings of the small towns of his own country and were very popular. They include *Luren*, *Den gale Christian*, *Bjergmanden*, and many others. After his death a collection of them was made by Schwach (8 vols., Christiania, 1855-58). A further selection, *Noveller i Udvalg*, was printed at Christiania in 1882. Hansen also wrote a volume of poems, *Digtninger* (1816).

HANSEN, hân'zen, PETER ANDREAS (1795-1874). A German astronomer, born at Tondern in Schleswig. He was employed by Schumacher, director of the Altona Observatory, to assist in the measurement of an arc of the meridian in Holstein. In 1825 he succeeded Encke as director of the observatory at Seelberg, near Gotha, where he remained for the rest of his life. He devoted his attention chiefly to the lunar theory, a revision of which he published under the title *Fundamenta nova investigationis orbitæ veræ quam luna perstruat* (Gotha, 1838), and his *Tables de la Lune* (London, 1857) were so excellent that they were awarded a prize of £1000 by the British government and were published at its expense. The tables have been adopted for use in the calculations of the various astronomical ephemerides and nautical almanacs. Hansen was also the author of a large number of papers relating to the determination of the orbits of comets and planets. He was a foreign member of the Royal Society of London and was awarded the Copley medal of the society in 1850. He was also an associate of the Royal Astronomical Society, and in 1842 and 1860 received their gold medal for his research work in astronomy and his lunar tables. Hansen will rank for all time as one of the first mathematical astronomers of the nineteenth century.

HANSEN, hân'sên, THEOPHILUS VON (1813-91). A Danish architect, born in Copenhagen. He studied in the Copenhagen Academy and for further training traveled extensively in Italy and Greece. At Athens he practiced his profession to some extent, until the revolution of 1843 compelled him to withdraw to Vienna, where he was appointed superior councilor of architecture in 1860 and was for several years professor of architecture in the Academy of Fine Arts. He was an exponent of the classic Greek style and executed numerous works at Vienna, including the Greek Church, the restored façade of the Sina Palace, the Academy of Fine Arts, the Bourse, the Parliament House, and the Epstein Palace. Niemann and Feldegg published *Theophilus Hansen und seine Werke* in an edition de luxe at Vienna in 1893.

HANSE (hâns) **TOWNS**, LAWS OF THE; also known as the HANSEATIC CODE. A code of maritime law, ordained for the regulation of commerce by the towns comprised in the Hanseatic League. It was established about the end of the sixteenth century and enjoyed great authority throughout northern Europe, until superseded nearly a century later by the *Guidon de la Mer* and the *Ordonnance de la Marine* of Louis XIV (qq.v.). It was first published in German in 1597 and in 1614 was revised and enlarged by a congress of delegates from the

several towns of the league, which was held at Lübeck. It has been translated into Latin (by Kuricke) and into French (by Cleirac, in *Us et Coutumes de la Mer*, Paris, 1647). See ADMIRALTY LAW; and consult: Justice, *A General Treatise of the Dominion and Laws of the Sea* (London, 1705); Reddie, *Researches Historical and Critical in Maritime International Law* (Edinburgh, 1844); Pardessus, *Collection des lois maritimes antérieures au XVIIIème siècle* (Paris, 1829-45).

HAN'SHEW, THOMAS W. (1857-1914). An American actor and writer, born in Brooklyn, N. Y. He went on the stage when only 16 years old, playing minor parts with Ellen Terry's company. Subsequently he played important rôles with Clara Morris and Adelaide Neilson. Later he was associated with a publishing house in London, where he resided at the close of his life. He used, among others, the pen name "Charlotte May Kingsley," and wrote in all more than 150 novels. At the time of his death it was reported in leading periodicals that he was the author of the stories written under the pseudonym "Bertha M. Clay." As a matter of fact, the earlier series of these stories was written by Mrs. Charlotte M. Braeme, of England, and after her death other authors took up the work, but Hanshaw was not one of them.

HANSLICK, hânslîk, EDUARD (1825-1904). An Austrian musical critic and author. He was born at Prague and prepared himself for the bar, studying law at Prague and Vienna. In 1849 he received his degree of LL.D. and entered the government service; but the attraction which music had for him gradually drew him into the career he subsequently followed. His studies under Tomaschek at Prague, and later his experiences as musical critic of the *Wiener Zeitung* (1848-49), increased his interest in music. His most prominent characteristic was an uncompromising antagonism to exaggerated and foolishly sentimental criticism in music, and his celebrated work, *Vom Musikalisch-Schönen: ein Beitrag zur Revision der Aesthetik der Tonkunst* (1854; 10th ed., 1902), is particularly severe. He was one of Wagner's most bitter opponents, and one of the last of the critics to recognize the possibilities in the new style of opera. On the other hand, he was among the very first to recognize the towering greatness of Brahms. He was for many years musical editor of the Vienna *Neue Freie Presse*, and in 1861 became professor in Vienna University in the department of musical history and æsthetics. Those of his criticisms that are of more than passing value he republished in several volumes. Among these are: *Geschichte des Konzertwesens in Wien* (1869-70); *Die moderne Oper* (1875-1900); *Konzerte, Komponisten und Virtuosen der letzten fünfzehn Jahre* (1896); *Am Ende des Jahrhunderts* (1899). His autobiography, *Aus meinen Leben*, appeared in 1894.

HAN'SOM, JOSEPH ALOYSIUS (1803-82). An English architect and inventor. He was born at York and began to practice his profession as an architect at Halifax in 1825. He designed and built the Birmingham Town Hall, which he completed in 1833; but he became bankrupt under the terms of his suretyship for the builders. In 1831 Hansom patented a safety cab; but the modern vehicle which bears his name differs materially from the original one. In 1834 Hansom founded the *Builder*, but was

forced by lack of funds to discontinue its publication. After 1842 he gave all of his time to architecture, ecclesiastical and domestic, chiefly for the Roman Catholic church, to which he belonged. Among the best known of the buildings designed and erected by him are St. Walburge's Church, Preston, Lancashire; the cathedral at Plymouth; the church of Our Lady and St. Philip Neri at Arundel; the Jesuit church at Manchester; the church of St. François de Sales, near Boulogne; and St. Asaph College.

HANSON CAB. A light two-wheeled, one-horse, covered carriage, with the driver's seat elevated behind. The prototype of the modern hansom was named for its inventor, Joseph Aloysius Hansom (q.v.). See CARRIAGE.

HAN'SON, ALEXANDER CONTEE (1786-1819). An American editor and politician, born in Maryland, and educated at St. John's College, Annapolis. As editor of the *Federal Republican*, of Baltimore, he published an article in 1812 attacking the Madison administration with such bitterness that a mob, by way of reprisal, wrecked his office. A subsequent attempt to continue publication led to renewed violence, and he and a number of friends and supporters were removed to the local jail for safety. The populace, however, made its way into the jail, wounded Hanson and others, and killed General Lingan. Hanson then removed his office to Georgetown, D. C., where he continued the publication of his paper. Hanson was a Federalist member of the national House of Representatives in the Thirteenth and Fourteenth congresses, serving until November, 1816. Elected to the Senate, he served from January, 1817, until his death.

HANSON, LEVETT (1754-1814). An English author, born in Malton, Yorkshire. He was a lifelong friend of Admiral Nelson, with whom he went to school at Walsham, Norfolk. Hanson studied at Cambridge, but went abroad when 22 years old and spent the remainder of his life there, with but occasional visits to England. He was the recipient of many foreign orders and honors, while his experience in European courts gave him opportunity to collect material for his book, *An Accurate Historical Account of all the Orders of Knighthood at Present Existing in Europe* (1803). This was dedicated to Nelson, and his *Miscellaneous Compositions in Verse* (1811) to another friend, Warren Hastings.

HANSTEEN, hân-stân', CHRISTOPHER (1784-1873). A Norwegian astronomer, born at Christiania. At first intended for the legal profession, he subsequently devoted himself entirely to the study of mathematical science. In 1814 he was appointed to the chair of mathematics in the University of Christiania and there, in 1816, published his celebrated work on magnetism, which was afterward translated into German under the title *Untersuchungen über den Magnetismus der Erde* and produced a great sensation, especially in England. He made an extensive journey to Siberia, for the purpose of making magnetic observations, in the years 1828 to 1830, and returned to Europe with a large collection of facts, which were of much service in aiding to dispel the obscurity which enveloped this subject. On his return to Christiania he prevailed upon the government to erect an observatory, fitted also for magnetic observations. Besides occupying his chair in the university, Hansteen was professor of

mathematics in the school of artillery, superintended the triangulation of Norway, and helped in the reorganization of the national system of weights and measures. He published lectures on astronomy, a work on mechanics, another on geometry, several scientific memoirs, and was one of the editors of the *Magazin für Naturwissenschaftler*.

HANSTEIN, hân'stîn, JOHANNES VON (1822-80). A German botanist, born at Potsdam. He studied horticulture in Potsdam and Berlin, where he received the degree of Ph.D. in 1848. He was made a lecturer in the University of Berlin in 1855. In 1861 he was appointed custodian of the Royal Herbarium, Berlin, and from 1865 was professor of botany and director of the botanical garden at the University of Bonn. His botanical studies were varied, but have to do chiefly with plant anatomy and morphology. His publications include: *Untersuchungen über den Bau und die Entwicklung der Baumrinde* (1853); *Versuche über die Leitung des Saftes durch die Rinde* (1860); *Uebersicht des natürlichen Pflanzensystems* (1867); *Einige Züge aus der Biologie des Protoplasmas* (1880).

HANS VON BÜHEL. See BÜHLER, HANS DER.

HANSWURST, hân's'vurst' (Ger., Hans Sausage). The conventional buffoon in old German comedy. The name first appears in 1519 and is used by Luther in his *Wider Hanns Worst* in 1541 and as the name of a peasant in a play of 1553, but first occurs in 1573 as the title of a character in comedy.

HANTS, hânts. A colloquial name for the English County of Hampshire (q.v.).

HANUMÂN, hân'nô-mân, or **HANŪMAN**. A famous monkey chief in Hindu mythology and the legends of the epic period of India and still a favorite divinity in Hindustan. He is represented in the Sanskrit epic *Rāmāyana* (q.v.) as the special ally and friend of Rāma and as leading the monkey hosts that helped this hero to recover his wife Sītā, who had been carried off by the demon Rāvana. The exploits of Hanumân play an important part in the account of this expedition and the great war which followed. On one occasion Hanumân bridged over the passage between India and Ceylon with enormous rocks, which he and his monkey followers threw into the sea. Adam's Bridge in the straits between the island and the mainland is still pointed out, according to tradition, as the remains of those boulders. Many other stories and curious legends regarding him are told in the *Rāmāyana*. His birth was semidivine. His mother was a celestial nymph that had been cursed to assume a simian shape; his father was the god of the wind. Hence Hanumân is sometimes called Māruti, a child of the wind. His large face or monkey jaw is likewise accounted for in a legendary manner. The god Indra, angered at his youthful prowess, tried to slay him by the thunderbolt, but was able only to fell him and break his jaw. From this circumstance he received the name Hanumân, 'he of the (broken) jaw.' The monkey features, or masklike face of this deified ape, whose idols are easily recognized by the prodigious tail, are familiar enough in India, and episodes taken from his history are found represented in sculpture or in painting almost everywhere in Hindustan. According to the *Rāmāyana*, he was an astute grammarian and skilled in many branches of learning. His prowess is also recounted in

the *Mahābhārata*, and a Sanskrit drama, the *Hanumân-nāṭaka*, "The Play of Hanumân," celebrates his deeds in 14 acts. It is not unlikely that underneath the curious and uncouth figure of Hanumân and his monkey hosts we may recognize some representatives of the earlier and ruder civilization of Lower India that may have joined forces with the invading Aryan civilization. The reverential regard paid to monkeys around the Hindu temples may, in a way, be associated also with Hanumân. Consult: Dowson, *Hindu Mythology* (London, 1879); Wilson, *Hindu Mythology* (ib., 1900); Macdonell, *History of Sanskrit Literature* (ib., 1913); Noble and Coomaraswamy, *Myths of the Hindus and Buddhists* (New York, 1914). See DRAVIDIANS; RĀMĀYANA. For illustration, see Plate of HINDU DEITIES in the article INDIA.

HANUNU. See the first article HANNO.

HANUS, hân'us, PAUL HENRY (1855-). An American educator, born at Hermsdorf underm Kynast, Silesia, Prussia. He was educated at the Wisconsin State Normal School (Platteville) and the University of Michigan. In 1891 he became assistant professor, and in 1901 full professor, of the history and art of teaching at Harvard University. In 1911 he was appointed by a committee of the New York City Board of Estimate and Apportionment to take charge of a survey of the educational condition of New York City. The commission, which he headed, made a voluminous report in 1913. He was chairman of the Massachusetts State Commission on Education in 1908-09 and a member of the State Board of Education from 1909 to 1914. In 1900-10 he was president of the National Society of College Teachers of Education. His publications include: *Elements of Determinants* (1886); *Geometry in the Grammar School* (1894); *Educational Aims and Educational Values* (1899); *A Modern School* (1904); *Beginnings in Industrial Education and Other Educational Discussions* (1908); *School Efficiency* (1913).

HANWAY, JONAS (1712-86). An English traveler and philanthropist, born at Portsmouth. On the death of his father the family moved to London, and in 1719 Hanway was apprenticed to a merchant in Lisbon. In 1743 he became interested in trade with the East and journeyed through Persia, experiencing many hardships. After his return from Persia he spent five years in St. Petersburg, at the end of which period he received a large bequest which enabled him to retire from business. He returned to London in 1750, where, excepting for two trips abroad, he spent the remainder of his life, devoting himself to philanthropy and literature. In 1756 he was one of the founders of the Marine Society, organized to train seamen for the navy, and two years later became a governor of the Foundling Hospital, where he was active as an opponent of indiscriminate relief. In 1758 he helped to found Magdalen Hospital for Fallen Women. Hanway was almost constantly employed in the promotion of important reforms, such as the protection of the infant parish poor and of child chimney sweeps, the solitary confinement of prisoners, and the establishment of Sunday schools. He was, however, a man of many harmless eccentricities, of which his antipathy to tea drinking was one of the most amusing, and his attack on the habit had the unique honor of drawing a reply from Samuel Johnson. It

is said that he introduced the use of the umbrella in London, after 30 years of ridicule. As a writer, Hanway was most prolific. Seventy-four books and pamphlets by him are enumerated, of which only one, his *Historical Account of the British Trade over the Caspian Sea* (4 vols., 1753), which contains an account of his travels, is of any lasting value. The most of his writings were occasional in character and were concerned largely with the reform movements in which he was interested. He also wrote several theological works, and *Common Sense: Nine Dialogues on the American War* (1775). As a reward for his public services, Hanway was appointed one of the commissioners for victualing the navy in 1762—an office which he held until obliged to resign, on account of ill health, in 1783. Consult Pugh, *Remarkable Occurrences in the Life of Jonas Hanway* (London, 1787).

HANWELL. A town in Middlesex, England, 10 miles west of St. Paul's, London. It is the seat of the Middlesex County Lunatic Asylum. (Map: London, E 4.) It has a progressive municipality, owns a sewage farm and recreation grounds, and maintains an isolation hospital. It is mainly a residential district. Pop., 1901, 10,400; 1911, 19,129.

HANYANG. See **SEOUL**.

HANYANG, hán'yáng'. A departmental city of China, situated on the left bank of the Yang-tse, at the point where it receives the waters of the river Han, which separates it from Hankow. Its most conspicuous feature is Ta-pieh Shan, a precipitous hill crowned with ruined fortifications, from which a fine view of the surrounding country can be obtained. Commanding as it does both the Han and the Yang-tse, it early became an important military post, and the possession of Ta-pieh Shan was always an object of much interest to the contending parties in the numerous revolutions, rebellions, and wars which have characterized Chinese history from the earliest times. It received its present name in the sixth century, and, while it continued to be a strong military post, its advantageous position for trade soon attracted attention, and it became a very populous and flourishing city. Notwithstanding its proximity to Hankow, this state of things continued until the Taiping Rebellion (1852-64), when it was almost entirely wiped out. Hanyang never recovered until Chang Chi-tung, Governor-General of Hukwang, selected it in 1880 for the site of the arsenal and the great steel and iron works, cotton-spinning factories, etc., which he has established there. The ironworks (begun in 1891) cover a large area and include a number of large hot-air blast furnaces, and steam hammers, innumerable rollers, and all the necessary machinery for producing everything required for the Hankow-Peking Railway, which he planned. The sheds cover 20 acres. The coke used is obtained from Wales, but the ore needed in the manufacture of the rails is mined near Wangshiking, 76 miles below Hankow. Both hard and soft coal are mined in the same neighborhood. The plant in Hanyang also includes a railway 1½ miles long, from the Yang-tse to the works, and thence to the Han, with an inclined plane on the Yang-tse bank, 300 feet high, up which the cars are hauled by powerful machinery. The whole is under foreign management. Pop., about 100,000.

HAN-YÜ, hán-yü', better known as **HAN**

WEN-KUNG, hán wên-k'ung' (708-823). A Chinese poet, essayist, and philosopher. He was born at Tengchow in Honan in 708, became a diligent student of the classics, graduated with honors at 24, and shortly thereafter entered the public service. In 810, while Vice President of the Criminal Board, he incurred the displeasure of the Emperor, a great patron of Buddhism, by addressing to him a strongly worded remonstrance against certain public honors with which an alleged relic of Buddha was being conveyed to the palace. Through the intervention of friends he escaped with his head, but was dismissed from the court and banished to a semibarbarous region in the Province of Kwangtung. There he served for eight months as Governor, civilizing the inhabitants and conferring upon them many benefits. Afterward he was recalled to the capital, restored to high office at court, and loaded with honors, dying at 55, in 823. He was canonized as *Wen-kung* (Prince of Letters), was ennobled as Earl of Changli, and in 1084 his tablet was placed in the temple of Confucius. His name is venerated as that of the foremost scholar in China.

HAPARANDA, hā'pā-rān'dā. The most northerly town of Sweden, situated near the mouth of the Torneå on the Russian border, near the north shore of the Gulf of Bothnia (Map: Sweden, G 4). It is noted chiefly for its meteorological station, established in 1859. Its port is Salmis, 7 miles distant. Pop., 1901, 1334; 1911, 1442.

HAPAXANTHIC, hā'pāks-ān'thīc, **HAPAX-ANTHOUS** (from Gk. ἀπαξ, *hapax*, once + ἄνθος, *anthos*, flower). A botanical term applied to plants that blossom and fruit only once in their life cycle. They are also characterized by the almost complete absence of vegetative reproduction. The term and its synonym, "monocarpic," are in contrast to "polycyclic." All annuals, most biennials, and a few perennials are hapaxanthic plants.

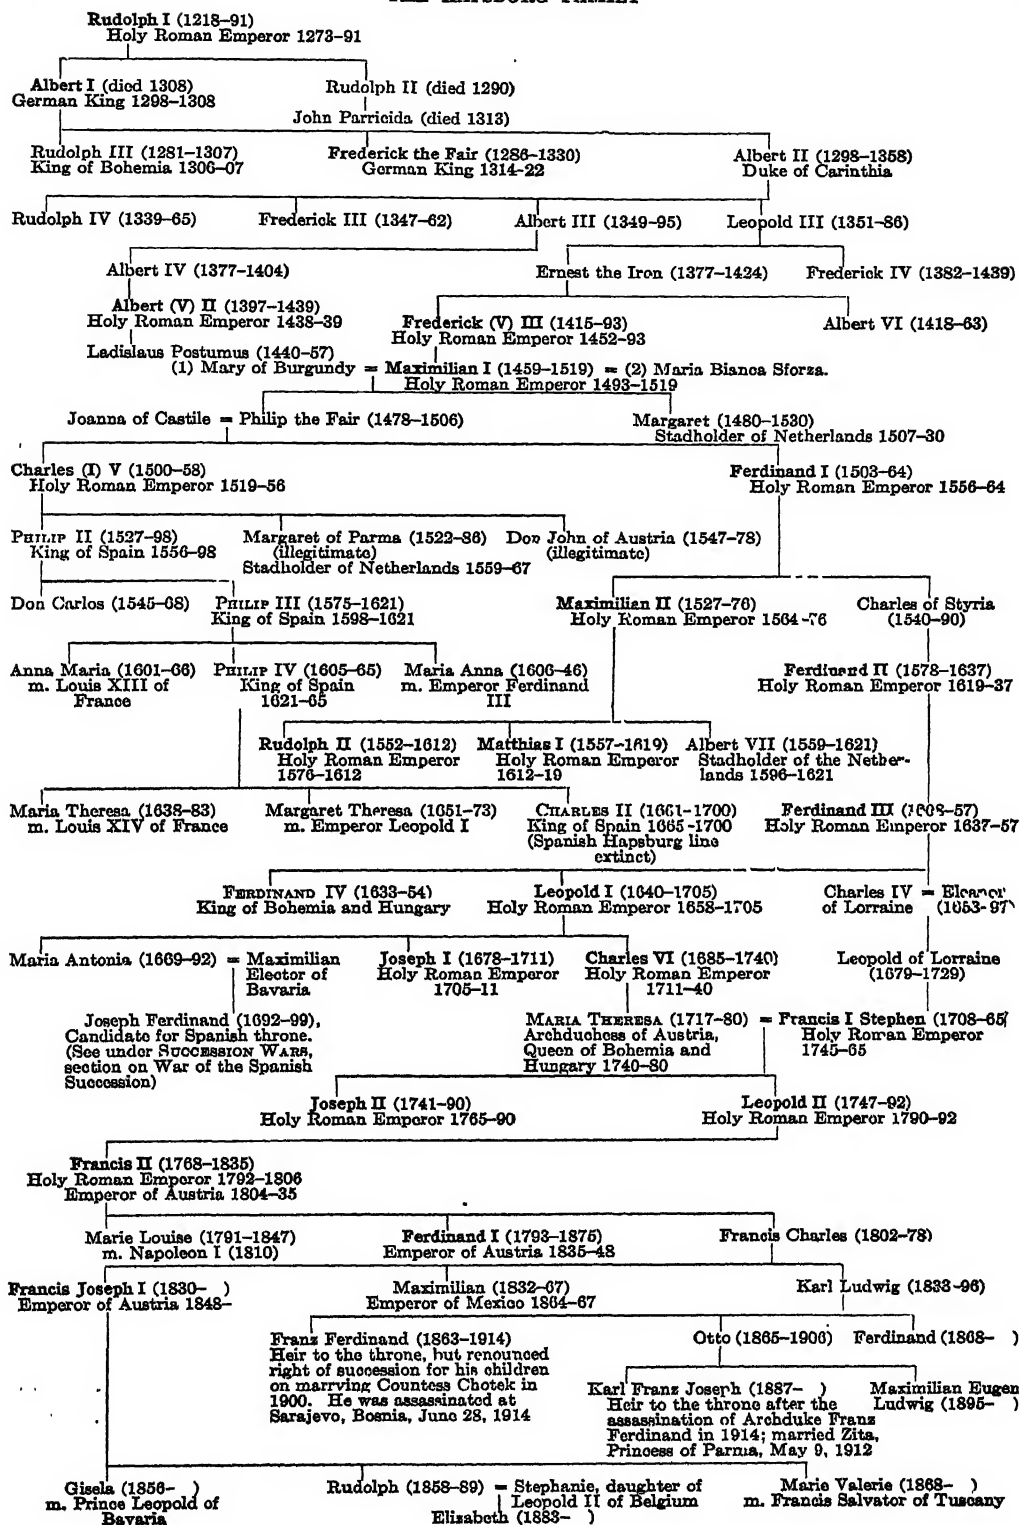

HAP'GOOD, NORMAN (1868-). An American editor and critic, born in Chicago, Ill. He graduated at Harvard in 1890 and at the law school there in 1893. He was dramatic critic of the *New York Commercial Advertiser* and of the *Bookman* in 1897-1902 and became editor of *Collier's Weekly* in 1903 and of *Harper's Weekly* in June, 1913. His editorial writing attracted much attention by its vigor and range. His publications include: *Literary Statesmen* (1897); *Daniel Webster* (1899); *Abraham Lincoln* (1899, 1913); *The Stage in America* (1901); *George Washington* (1901); *Industry and Progress* (1911).

HAPH'ARAH, hāf-tā'rā (pl. *haph'aroth*, Heb., sections, from *pātar*, to split). The 54 sections from the prophets used in the synagogues on Sabbaths, in connection with the same number of sections into which the law is divided, called *parashoth*.

HAPLOMI (Neo-Lat. nom. pl., from Gk. ἁπλοος, *haploos*, single + ὤμος, *omos*, shoulder). An order of soft-rayed, pike-like fishes, characterized chiefly by the absence of the mesocoracoid bone. They are mostly inhabitants of fresh waters and include the mud minnows (*Umbriidae*), the pikes (*Luciidae*), the great group of top minnows, killifishes, and other "cyprinodonts" (*Poeciliidae*), and the blindfish (*Amblyopsidae*).

HAPPINESS, SEVEN GODS OF. See **SEVEN GODS OF HAPPINESS.**

THE HAPSBURG FAMILY

HAPSBURG, or **HABSBURG**, haps'burk, House or. The Imperial royal house of Austria-Hungary. It is commonly supposed to have derived its name from the castle of Habsburg, or Habichtsburg (Hawk's Castle), on the bank of the Aar, in the Swiss Canton of Aargau. The castle is said to have been built about 1027 by Werner, Bishop of Strassburg. His nephew, Werner I, was the first Count of Hapsburg; but the real founder of the house of Hapsburg was Albrecht (or Albert) III (c.1172), the son of Werner II, who, in addition to extensive estates which he had inherited in Upper Alsace, acquired several Swiss districts (in the neighborhood of Zurich, the Lake of Lucerne, etc.). To these his son, Rudolph I, added the Countship of Aargau. On Rudolph's death, in 1232, his sons, Albert IV the Wise and Rudolph II, divided their father's possessions—Rudolph becoming the founder of the Hapsburg-Lauffenburg line. This branch became extinct in 1415, its possessions, except the Klettgau, reverting to the Austrian line.

The son and successor of Albert IV, Rudolph III, was elected to the Imperial throne of Germany in 1273 (as Emperor, styled Rudolph I), and founded the greatness of the house of Hapsburg. In 1278 he vanquished Ottokar II of Bohemia and forced him to give up the duchies of Austria and Styria with other territories. In 1282 he invested his sons Albert and Rudolph with the territories which he had thus acquired. Albert I purchased his brother's share in 1283, and on the death of his father, in 1291, succeeded to that Prince's possessions, which included large districts in Switzerland. (See AUSTRIA-HUNGARY.) He was raised to the Imperial throne of Germany in 1298 and was murdered in 1308 by his nephew, John the Pariaide, while preparing to subdue the Swiss, who had risen in defense of their liberties. Of his six sons, Rudolph was King of Bohemia (1306-07), and Frederick I was one of the rival kings of Germany (as Frederick III) from 1314 to 1322 (died 1330). For the succeeding hundred years the Imperial office was held by other families, and the Hapsburgs were occupied mainly in ruling their hereditary possessions. It was a family principle that the lands were indivisible and that the brothers should rule jointly. This principle was neglected at times, but the deaths of holders of territories which had been separated from the main possessions brought all Hapsburg lands under a single rule in 1457 and again in 1490. During this early period there were relatively few children, and many of the princes died without leaving heirs. This is in striking contrast with the later Hapsburgs, who were remarkably prolific, families of 13 to 15 children being common.

From 1438 until the abdication of Francis II in 1806, all but two of the Emperors of the Holy Roman Empire (Charles VII and Francis I) were Hapsburgs. The house attained its greatest power through the marriage alliances in the last quarter of the fifteenth century. In 1477 Maximilian, who became Emperor in 1493 (Maximilian I), married Mary of Burgundy, daughter of Charles the Bold, and thus obtained all the Burgundian possessions, which included the Netherlands, at that time the most opulent country in Europe. His son, Philip, who died in 1506, married Joanna, heiress of Spain, daughter of Ferdinand and Isabella. Their eldest son, Charles I (Charles V of the Empire),

received as his share of the family possession Naples, Sicily, and Sardinia, while the Austrian possessions (Austria, Styria, Carinthia, Carniola, Tirol, Alsace, Breisgau, etc.) were left to him and his brother Ferdinand jointly. His share in these last Charles relinquished to Ferdinand. In 1535 Charles added the Duchy of Milan to his possessions. Charles was the founder of the Spanish line of Hapsburgs. Ferdinand was elected in 1526 to the throne of Bohemia (the Bohemian kingdom at this time including Moravia, Silesia, and Lusatia), which soon became practically hereditary in the Hapsburg line. At the same time he was elected King in a part of Hungary, the crown of which country, after the expulsion of the Turks, was by violence made hereditary in the Austrian dynasty (1687). The union of so many different countries in the hands of one family threatened the security of the other European countries, and especially of France, which was shut in by the possessions of Charles V. The rivalry which resulted continued until the end of the eighteenth century and brought upon Europe many wars. (See EUROPE.) In the sixteenth and seventeenth centuries the struggles between France and the Hapsburgs were involved with the religious wars. In the second half of the sixteenth century the power of the Spanish branch of the Hapsburgs received a severe blow in the revolt of the Netherlands, the northern provinces of which finally achieved their independence. By the middle of the seventeenth century the Hapsburg power was declining steadily. The Spanish branch, which after Charles I (Charles V) had been represented by Philip II, III, and IV, and Charles II, became extinct in 1700. The Austrian Hapsburgs became extinct in the male line by the death of Charles VI in 1740. By the Pragmatic Sanction (q.v.), however, his daughter, Maria Theresa, succeeded to the throne. She was married to Francis I of the house of Lorraine, and their descendants have continued to rule in Austria until the present day. One of Maria Theresa's 15 children was Marie Antoinette, the wife of Louis XVI of France; a great-granddaughter, Maria Louisa, was the wife of Napoleon I; another great-granddaughter was the wife of Pedro I of Brazil; and a great-grandson was Maximilian I of Mexico.

Consult: Liehnowsky, *Geschichte des Hauses Habsburg* (8 vols., Vienna, 1836-44); Coxe, *History of the House of Austria* (4 vols., London, 1804-72); Schulte, *Geschichte der Habsburger in den ersten drei Jahrhunderten* (Innsbruck, 1887); Wehrlich, *Stammtafel zur Geschichte des Hauses Habsburg* (Prague, 1892); Hoernes, *Oesterreich-Ungarn und das Haus Habsburg* (Teschen, 1892); Gilbart-Smith, *The Cradle of the Hapsburgs* (London, 1907); Colquhoun, *The Whirlpool of Europe, Austria-Hungary and the Hapsburgs* (New York, 1900); R. W. Seton-Watson, *The Southern Slav Question and the Hapsburg Monarchy* (London, 1911); H. W. Stead, *The Hapsburg Monarchy* (New York, 1913). See genealogical table of the Hapsburg family.

HAPTERA (Neo-Lat. nom. pl., from Gk. *ἄπτερος*, *hapteros*, to fasten). A botanical term denoting organs for attachment that contain no vascular bundles, and are therefore not roots. They occur on various marine algae, on the tendrils of *Ampelopsis*, etc.

HAPTOTROPISM. See THIGMOTROPISM.

HARADA, hā'rā'dā, TASUKU (1863-). A Japanese educator, descended from a *samurai* family of Kumamoto. He was educated at Doshisha College, Kyoto, and at Yale University; was pastor of Congregational churches in Kobe, Tokyo, and Kyoto, and edited Japanese Christian weeklies; in 1907 became president of the Doshisha University, and in 1910 lectured in several American colleges. He received honorary degrees from Edinburgh University and from Amherst College. Besides his writings in Japanese, he published in English *The Faith of Japan* (1914), the Hartford-Lamson (Hartford Theological Seminary) lectures on religion.

HARAHAN, hār'a-hān, JAMES THEODORE (1843-1912). An American railroad official, born at Lowell, Mass. He was educated in the public schools, began railroad work as a switchman in 1864, and by 1883 had risen to be general superintendent of the Louisville and Nashville Railroad. For part of a year (1885) he was superintendent of the Pittsburgh division of the Baltimore and Ohio, but he returned to the Louisville and Nashville as assistant general manager—the corresponding position on the Lake Shore and Michigan Southern he held from 1888 until 1890, when he was elected second vice president of the Illinois Central. As a result of the struggle for the control of the Illinois Central between E. H. Harriman and Stuyvesant Fish, Harahan in 1906 became president of the road, in the interest of Harriman, who won the contest. He was killed in a railroad wreck.

HARA-KIRI, hā'rā-ke'rē (Japanese, belly-cut), or, more elegantly, **SEPPŪKŪ**, sēp-pū'ku (the Japanese pronunciation of *Ts'ich-fuh*, to cut belly). Self-disembowelment; a form of suicide permitted in feudal Japan among the territorial nobles and samurai (q.v), when unwilling to survive some disgrace. From being a custom, it had, about 1500 A.D., developed into a privilege, so that noblemen and gentlemen could demand that the form of judicial punishment be death at their own hands instead of dying like common criminals. The ceremonies and etiquette of *seppūkū* became very elaborate, and this form of judicial suicide degenerated into execution at the hands of one's best friend. Arrayed in the neatest of clothing, in a measured space, behind white curtains, the victim and his friends and the official witnesses took their places. The dirk was laid upon a tray and presented by the second, while at the moment of incision, or while the principal was stretching out his hand to seize the dirk, the "best man" or friend of the accused (*Kaishaku* in Japanese) took off the latter's head with a sweep of his sword. Then, the official witnesses having inspected and identified the head, it was reverently washed by friends. With the decay of feudalism, hara-kiri as a privilege has fallen out of use, but it still survives as a type of voluntary suicide. The main motives for voluntary hara-kiri are loyalty to a dead superior, avoidance of a dishonor in battle, and protest against a false national policy. For instance, the motive of the suicides of General Nogi and his wife on the evening of the funeral of the late Emperor is generally understood to have been their loyalty to the dead superior. During the Russo-Japanese War the officers in command of the troops on the transport *Kimshu-maru* on her way from Japan to Manchuria committed hara-kiri when their boat was captured by a Russian man-of-

war which came down quite unexpectedly from Vladivostok. The motive in this case was to avoid the dishonor of captivity. The motive of an indignation at what was deemed a false national policy is manifested by the fact that fully a score of men committed suicide in the orthodox method of hara-kiri, when the dissatisfactory terms of the peace negotiations at the end of the wars with China and with Russia were reported. *Harri-karri*, a form of the word "hara-kiri," which is frequently found in newspapers and more pretentious publications, is erroneous, as is the translation "happy dispatch." Consult: Mitford, *Tales of Old Japan* (London, 1876); Chamberlain, *Things Japanese* (ib., 1891); Gulick, *Evolution of the Japanese* (New York, 1903); Longford, *The Evolution of New Japan* (ib., 1913).

HAR'ALD, or **HAR'OLD**, I, surnamed **HAARFAGR**, or **FAIR-HAIRED** (c.850-933). King of Norway from about 860 to about 930. He was a descendant of the ancient race of the Ynglings, and the son of Halfdan the Swarthy, the most powerful of the many jarls or petty kings who then ruled in Norway. According to the popular saga, Harald was induced to attempt the subjugation of the whole of Norway by his love for a beautiful maiden, named Gyda, who declared that she would not be his wife until he was sole King of the country; and he swore that he would neither cut nor comb his hair till he had subdued all the land to his sway—an oath which he kept. After many years' contest with his brother jarls, and after defeating the last general confederacy of the independent Norwegian chieftains in a naval battle at Håfrsfjord, he remained sole ruler of the land (872). Harald's severity compelled the deposed rulers to seek other homes; and his reign is memorable for the many new settlements which were made by these exiles in the Orkneys, the Hebrides, the Shetlands, the Faroe Islands, and Iceland, which, except Iceland, were also subdued by Harald. (See **NORMANS**.) Although a barbarian, Harald ruled with a sound policy in advance of his age, and by his firmness succeeded in suppressing for a time the private warfare and sea piracy which had prevailed in Norway before his reign. The dissensions of his numerous sons, however, checked all the good that might have resulted from his measures. To restore concord in his family, he divided his dominions among his children, but vested the supreme power in his eldest son, Eric Blodöks, or Bloodaxe (c. 930). Harald died about 933. Consult: Boyesen, *Norway* (New York, 1886); Bugge, *Vikingerne* (Copenhagen, 1906); C. Young, *Harald, First of the Vikings* (New York, 1911).

HARALD, or **HAROLD**, III, surnamed **HAARDRAADE**, or **HARD RULER** (1015-66). King of Norway from 1046 to 1066. He was the son of Sigurd Syr, King of Ringerike, and a descendant of Harald I. In his boyhood he was present at the battle of Stiklestad in 1030, in which his brother, Olaf, King of Norway, surnamed the Saint, was slain. Harald subsequently went to the court of Jaroslaw, Grand Prince of Novgorod and Kiev, and afterward to Constantinople, where he became captain of the Varangian bodyguard of the Greek Emperors. In this office he experienced many marvelous adventures, which have supplied abundant materials for the narratives of the older sagas and the modern romances of the North. According to these, he

took part in the expedition against the pirates of the Mediterranean and visited Jerusalem, where he fought successfully against the Saracens, whom he also defeated in 18 pitched battles in Sicily and Africa. On his return to Constantinople he is said to have drawn upon himself the vengeance of the Empress Zoë by an intrigue with her relative, Mary, after he had rejected Zoë's proffered love. He escaped with difficulty from prison, where he had been thrown on a charge of treason, returned to Russia (1044), married the daughter of Prince Jaroslaff, and took her with him to Norway (1046), where his nephew, Magnus, the son of St. Olaf, agreed to divide the royal power with him in return for a share of his treasures. The death of Magnus (1048) left him sole King of Norway. His unruly spirit would not, however, suffer him to rest, and he entered into a war to dethrone the King of Denmark. Although he was successful in battle against the Danes, he gained no real advantages by the contest: and in 1064 he concluded a peace in which he recognized the right of Sweyn, the nephew of Canute, to the throne of Denmark. In 1066 he landed in England to aid Tostig (q.v.) against his brother Harold, King of England, but was slain in battle at Stamford Bridge. Consult Boyesen, *Norway* (New York, 1886), and Munch, *Det Norske Folks Historie*, vol. ii (Christiania, 1855).

HARAM (Ar. *ḥarām*), that which is sacred, set apart, or prohibited). The term applied to the ground around a mosque, and particularly the area about the mosques at Mecca, Medina, Jerusalem, and Hebron, the four holy cities. The sacred boundary of Mecca is marked by pillars on all sides, except on the Jidda and Jairana roads, where there is some dispute as to the exact limits. It is not lawful to carry arms or to fight within these limits. According to Burton, the diameter of the Haram of Medina is from 10 to 12 miles. (*Personal Narrative of a Pilgrimage to El Medinah and Meccah*, vol. i, p. 362, London, 1855.) The ground inclosed by the walls around the mosques at Jerusalem and Hebron is counted as belonging to the Haram.

HA'ARAN, or **HAR'AN**, or **CHAR'AN** (Ass. *Kharranu*, road). A city in northern Mesopotamia and southeast of Edessa, at the junction of the Damascus road with the highway from Nineveh to Carchemish. For the Assyrians it became a strategic position of first-rate importance and is mentioned in inscriptions as early as the time of Tiglath-pileser I (c.1140-1105 B.C.). Sargon II (722-705 B.C.) refers to his having restored the ancient privileges of the place, and later kings, like Asurbanipal (688-625 B.C.), devoted themselves to the restoration of the temple to the moon god, which enjoyed a high reputation as a place of pilgrimage. Haran, the Carrhae of the Greeks and Romans, became, by virtue of its situation, the centre of considerable commerce. The temple was destroyed by the Medes when they put an end to the Assyrian Empire in 606 B.C., but was rebuilt by Nabonidus (556-539 B.C.). Pognon thinks that the city was destroyed in the time of the Achaemenian kings, and that the inhabitants built a new city farther to the south, the old town being represented by the ruins at Eski-Harran, or Old Harran. It was near the new city that the Roman general Crassus, in his eastern expedition, was attacked and slain by the Parthians (53 B.C.), and here also the

Emperor Caracalla was murdered at the instigation of Macrinus, 217 A.D. The place retained its importance down to the period of the Arab ascendancy. While Edessa became a Christian city, Haran continued to be pagan, but enjoyed toleration under Moslem rule by claiming to be Sabian. (See **MANDÆANS**.) According to the Book of Genesis, Haran was the first resting place of Terah and his family, after their migration from Ur of the Chaldees, and here Terah died before Abraham's migration into Canaan (Gen. xi. 31-32). The story recalls the tradition of the sojourn of some clans associated with Hebrews at some remote period. Consult: Chvolson, *Die Sabäer und der Sabismus* (St. Petersburg, 1856); Mez, *Geschichte der Stadt Harran* (Strassburg, 1892); Sachau, *Reise in Mesopotamien* (Leipzig, 1890); Pognon, *Inscriptions sémitiques* (Paris, 1907); Margoliouth, art. "Harranians," in Hastings, *Encyclopædia of Religion and Ethics*, vol. vi (New York, 1914).

HABAR, ḥā-rîr'. See **HABBAR**.

HARATIN, ḥār'ā-tên'. "Black" Berbers, living on the southern slopes of the Atlas Mountains. Their darker complexion is doubtless owing to mixture with negroes. They are interesting to the ethnologist in that they still preserve the patriarchal tribal state. See **BERBER**.

HARAU COURT, ā'rō'kōōr', EDMOND (1857-). A French poet and novelist, born at Bourmont (Haute-Marne). His first work, *La légende des sages, poèmes hystériques* (1883), under the pen name "Le Sire de Chabley," attracted some attention. He was originally a symbolist poet. *L'Âme nue* (1885), a collection of verse, in which some of the earlier poems were included, and *Soul* (1891) showed the poet's increasing power and melancholy charm. He also wrote the romance *Amis* (1887); *Shylock* (1889), adapted from Shakespeare's famous play; the *Passion* (1890), a drama; *Héro et Léandre* (1893); *Alienor*, an opera; *Don Juan* (1894); *Elizabeth* (1894); *Les Oberlé* (1905), a play from the novel by René Bazin; *Les Benoit* (1905); *La peur* (1907); *Trumaille et Pellisson* (1908).

HARBAUGH, hār'ba, HENRY (1817-67). An American clergyman of the German Reformed church, born near Waynesboro, Pa. He studied in Mercersburg Seminary, where he became professor of theology in 1863. He was the chief exponent of the "Mercersburg theology" (q.v.). From 1850 to 1866 he was the editor of the *Guardian*, a monthly magazine, and in 1866-67 of the *Mercersburg Review*. He published some poems in "Pennsylvania Dutch" and also wrote: *Heaven* (3 vols., 1843-53); *Union with the Church* (1853); *Birds of the Bible* (1854); *The Fathers of the German Reformed Church* (1858); *The Golden Censer* (1860); *Christological Theology* (1864).

HARBEN, WILL (IAM) N (ATHANIEL) (1858-1919). An American story-writer. Born at Dalton, Ga., he was educated privately; until 1888 was in business in the South; and in 1891-93 was assistant editor of the *Youth's Companion*. He was elected a member of the National Institute of Arts and Letters. Besides short stories published in the *Century*, *Harper's*, and other magazines, he is author of *Almost Persuaded* (1890); *A Mute Confessor* (1891, 1899); *The Land of the Changing Sun* (1894); *The Carruthers Affair* (1898, 1899); *Northern Georgia Sketches* (1900); *From Clue to*

Olimao (1901); *Abner Daniel* (1902); *The Georgians* (1904); *Pole Baker* (1905); *Mam' Lindy* (1907); *The Redemption of Kenneth Galt* (1909); *Dieie Hart* (1910); *Paul Rundel* (1912); *The Desired Woman* (1913); *The New Clarion* (1914).

HARBIN, här-bēn', or **KHARBIN**, kār-bēn'. A city of Manchuria, situated on the right bank of the Sungari River, in the Province of Kirin, at the point where the Manchurian Railway to Vladivostok bifurcates, a branch extending to Port Arthur and Peking. It is 615 miles northeast of Port Arthur and 350 miles northwest of Vladivostok (Map: China, N 2). It is a "flat city," created in 1896 by the Russian government to serve as a railway administration centre and military depot for the control of Manchuria. It consists of the old (or native) town, the harbor (or river) town, also called Prostín, and the administration town. The last two are almost exclusively Russian and consist of new and substantial brick houses, among which are a number of large and pretentious public buildings. There are three hotels, a technical and a commercial school, a theatre, hospitals, and among financial institutions a branch of the Russo-Chinese Bank. By the end of 1903 considerable commerce and industry had sprung up. Harbin was officially opened to the trade of the world on Jan. 14, 1907, according to the terms of the Chino-Japanese Treaty of December, 1905. Exports from Harbin consist mainly of grains, furs, and soy beans; in 1912 to the value of 6,223,593 haikwan taels (haikwan tael = \$0.726). Consulates of Great Britain, United States, France, Russia, and Germany are established there. Besides the extensive railway shops there are 18 flour mills in operation with modern machinery, several breweries, distilleries, meat-packing establishments, brick and sugar factories. Five candle factories were in operation in 1912. Steamers leave daily for the Amur, and the railway traffic is extensive. The population was estimated in 1913 at 68,000, of which more than 50 per cent were Russians. During the war between Russia and Japan, Harbin was an important military base of the Russians. The Chinese suburb, also called Fuchiatien, suffered terribly in the plague of January-March, 1911.

HAR/BOR (ME. *harbor*, *herbore*, *herberice*, *herberge*, Icel. *herbergi*, OHG. *heriberge*, Ger. *Herberge*, from OHG. *heri*, Ger. *Heer*, AS. *here*, army + OHG., Ger. *borgen*, AS. *beorgan*, to shelter). A naturally or artificially protected roadstead on ocean, lake, or river, for the safe anchoring or berthing of ships, either as a temporary refuge from storms (harbors of refuge) or for the transshipment of goods and passengers (commercial harbors). The harbor is strictly only the area of water with the works necessary for its formation, protection, and maintenance, such as breakwaters, jetties, etc. Thus, a port is made up of the harbor and the freight and passenger handling structures and machinery, such as the wharves, quays, docks, cranes, terminal railways, etc. In common engineering parlance, however, harbor works include all of the structures and appurtenances which facilitate the safe anchorage, loading, unloading, and repairs of vessels which seek the harbors in the way of commerce or safety from storm. This article will be devoted to the broad question of harbor construction:

for detailed consideration of the various parts making up a harbor, see **BREAKWATER**; **DOCK**; **JETTY**; **LIGHTHOUSE**; **QUAY**; **ETC.**

Harbors of refuge are provided on stormy coasts for the convenience of passing shipping and may or may not be a part of a port. Such a harbor, exclusively a harbor of refuge, has been built by the United States government at Sandy Bay, near Cape Ann, on the coast of Massachusetts. (See **BREAKWATER**, for description.) Commercial harbors are among the fundamentals of transportation and are a part, more or less highly developed, of every water-bounded city.

History. Harbors existed in the earliest stages of civilization, as soon as man began to venture onto the ocean. Cities sprang up at the locations on the seacoast where nature had provided an inlet or bay protected from the severity of the open ocean and at the same time accessible to the productive interior. Gradually, however, man began to devise artificial means of protection, mainly in the way of breakwaters, and many of the early seaports were of this class. Probably the earliest harbors were those built by the Phœnicians, who improved the Levantine coast ports for their extensive commercial operations. At Tyre two harbors were formed—to the north and to the south of the peninsula on which the city was placed. At Sidon similar but less extensive works long testified to the wealth and engineering genius of the Phœnicians. Carthage, in another part of the Mediterranean, also possessed a harbor, though its site is not very satisfactorily determined. It was in two divisions, formed by moles; time, however, has dealt so hardly with it that few traces remain. In Greece nature provided so many navigable inlets that little remained to be done by man. Nevertheless some minor works were executed at the Piræus and elsewhere, chiefly for warlike purposes. The Romans, finding ships necessary to the dominion of the world, set about constructing harbors for them. The coasts of Italy still show how well they understood both the principles and the practice of this branch of engineering. A distinguishing feature of their harbor making is the open or arched mole. Built with open arches, resting upon stone piers, it gives full play to the tidal and littoral currents, thus preventing the deposit of sand or mud; but in proportion as this advantage is increased (by increasing the span of the arches), so also is the agitation, and consequent insecurity, of the water within.

The decay of commerce and civilization consequent upon the fall of the Roman Empire put a stop to harbor making; nor did the art revive until the revival of commerce by the Italian republics of the Middle Ages. The rich traffic of Venice and Genoa soon led to the construction of suitable ports at those places; and the moles of the latter city, and the works in the lagoons of Venice, remain to this day. France was next in the field, embanking, protecting, and deepening the mouths of the rivers along her north-western shores, as at Havre, Dieppe, Dunkirk, etc. In 1627, during the siege of La Rochelle, Métezeau constructed jetties of loose rubble-stone, to prevent access to the city. England lagged far behind her continental rivals. With few exceptions, her ports were absolutely unprotected, or rather uncreated, until late in the eighteenth century. Two of the few exceptions

were Hartlepool, where a harbor was formed about 1250, and Arbroath, in 1394. In the seventeenth century, at Whitby and Scarborough, also in Yorkshire, rough piers were thrown out, protecting the mouth of the port; while at Yarmouth, in Elizabeth's reign, a north jetty, and subsequently a south one, were formed. An ancient mole existed at Lyme Regis. But the chief efforts of the early English engineers were directed against the shoals and waves of Dover. With the advent of Smeaton, however, things took a different turn; and now few countries surpass Great Britain in the number of artificially improved commercial harbors or in the just appreciation of their importance.

In the United States the first settlements were along the rivers and bays that afforded a natural anchorage, and little was done until Colonial days to improve the natural conditions. Under the English Colonial administration, as the various Atlantic ports grew in importance, the port works, such as wharves, piers, and docks, were brought to what was then a high stage of development, especially in Boston, New York, and Philadelphia, but not much effort was expended in improving the harbors proper, mainly because the leading ports were in natural harbors quite sufficient to care for the small vessels of the day. After the formation of the United States the Constitution vested all harbor rights in the Federal government, and from that time the design, construction, and maintenance of harbors (by that meaning the harbor proper) have been under the jurisdiction of the United States, acting through and by the Corps of Engineers, United States Army. The city and State have control of the port works in so far as these works do not encroach on the harbor. In a number of instances cities and States have supplemented their legally prescribed activities in port construction by assisting the Federal government in the work in the harbor proper, but always under the direction and control of the Federal government.

The Federal harbor work is now classed with river work and is appropriated for by Congress under an annual or biennial "River and Harbor Bill." Theoretically Congress appropriates this money on the advice of the Secretary of War, who in turn is advised by the Corps of Engineers. Actually for many years the "River and Harbor Bill," while embodying many of the unprejudiced recommendations of the Army Engineers, has contained many items for the improvement of harbors, and especially rivers, which are governed entirely by political expediency.

The first regular appropriation for harbor work in the United States was made in 1802; it amounted to \$30,000 and was to be devoted to the erection of public piers at Philadelphia, Pa. In 1822 an appropriation of \$22,700 was made for the construction of a harbor of refuge in Delaware Bay. The first approach to a river and harbor bill was made in 1826, when about \$150,000 was appropriated for carrying on work in about 20 localities. From 1826 to 1838 aggregate appropriations carried by the various river and harbor bills were about \$9,000,000. From 1838 to 1866 the aggregate expenditure was \$8,600,000. The total amount appropriated up to and including 1913 was \$746,927,946.61.

The completion of the Panama Canal led to great activity in harbor construction in the United States during the first decade of the

twentieth century on the already busy harbors of Boston, New York, and Philadelphia on the Atlantic coast, Galveston and New Orleans on the Gulf of Mexico, and San Francisco on the Pacific; plans were made for enlargement and betterment operations to continue over a term of years, and, on the Pacific coast particularly, enormous bond issues were floated by cities, to be expended in the creation of entirely new ports or in the modernization of small ports already in existence. The cities of San Francisco, Los Angeles (with its harbor 20 miles from the city), Richmond (in San Francisco Bay), Seattle, Portland, and Vancouver, all spent large sums of money in an effort to catch the prospective commerce through the canal.

In South America, too, there has been a great growth in harbor building, a necessary accompaniment to the commercial development of the continent. Buenos Aires, Rio de Janeiro, Pará, and Valparaiso have now unexcelled harbors, most of which have been artificially developed to a high degree.

Harbor Construction. Topographic and geologic conditions exercise a decisive influence upon the character and arrangement of harbors. A harbor may be situated directly upon the seacoast or in some river, bay, or gulf, or far in the interior on some river or maritime canal. The effects of the ocean, the action of the winds and tides, and the general conformation of the shore lines are other controlling factors in determining the arrangement of harbor works. Finally, the nature of the soil plays an important part in the arrangement of the basins, either natural or artificial, and the adoption of quays, jetties, piers, etc.

The great variety of commercial and natural conditions which influence the arrangement of harbor works of course call for a corresponding variety of arrangements. For the sake of clearness we may somewhat arbitrarily divide harbors into, first, those located on a comparatively open coast; second, those located at river mouths or on bays or gulfs, and thus more or less landlocked; and third, those located well inland on rivers or maritime canals.

The simplest form of open-coast harbor consists of a quay wall or bulkhead wall open to the sea, and serving only to enable ships to tie up alongside the shore and discharge and receive cargoes. Such a quay affords comparatively no protection from the winds, tides, and currents. The next advance is a straight pier extending out from the shore. This pier affords little shelter to ships from waves coming directly inshore, but in case of winds and waves alongshore it affords protection on its lee side. Another step in advance is to build the pier bent or curved with its concave side towards the shore. A still further improvement is to build two curved piers converging towards each other so as to include a harbor basin, with an opening between the sea ends of the piers.

Still another method is to build offshore an insular breakwater, which prevents the waves from breaking on the shore and thus forms a comparatively tranquil basin between the breakwater and the shore. Harbors of all these forms are found in practice.

FIG. 1.

More generally, however, two or more of the structures mentioned are combined to form harbor basins of various forms and dimensions.

FIG. 2.

Figures 1 and 2 show in outline form two representative open-coast harbors. When the conformation of the coast line is of the nature of an indentation in the land, as in the case of a bay, gulf, or river mouth, then a portion of it may be utilized, to take the place of one or more of the structures necessary to form an open-coast harbor. For example, the harbor of New York is so inclosed

FIG. 3.

by land that no artificial structures in the shape of breakwaters are needed to secure a tranquil harbor basin. Where the bay or inlet is less perfectly landlocked, breakwaters are constructed to supply the necessary protection at the exposed points. Figures 3 to 6 show actual arrangements of such structures in different circumstances.

FIG. 4.

The artificial works involved in inland harbors consist of jetties at the mouth of the river or canal, bank protection, and other constructions for preserving the channel, and the building of docks and quays in the harbor proper. Among the notable inland harbors of the world are those of Hamburg, Manchester, and Amsterdam in Europe, and Charleston and Philadelphia in America. Figure 7 shows the entrance harbor of the ship canal leading to the harbor of Amsterdam, and Fig. 8 that at the entrance of the Suez Canal, at Port Said.

FIG. 5.

In what has preceded, we have concerned ourselves only with the general arrangement of harbor structures under different topographic conditions. For specific information concerning jetties, breakwaters, docks, piers, quays, etc., the reader should consult the articles with these titles. Whatever the construction and arrangement of these constituent structures of a har-

bor may be, they are such that the harbor consists of an entrance, of an anchorage space, and of docks. By the entrance is meant the

FIG. 6.

navigable pass by which vessels enter the harbor. Some ports have natural entrance channels of large dimensions and great depth, and in other harbors this channel is of small size and has to be artificially constructed and maintained by dredging. In many ports large dredges

are kept constantly in service, removing the accumulated silt and sand from the bottom and maintaining the required depth.

In recent years the rapid growth of the large passenger steamers has put an increasing burden on harbor construction in providing proper depth and seaway. It should be recognized, however, that these enormous ships are economical only for those passenger lanes where constant traffic can be maintained, such, e.g., as the New York-Europe route. Designing minor ports for 1000-foot liners is apt to prove a waste of money. Generally speaking, the minimum width of practical entrance for ships of modern dimensions is from 230 feet to 400 feet, but for large commercial ports it should

be preferably from 650 feet to 1000 feet wide. Sometimes the entrance channels constitute the anchorage space tributary to the entrance channel and the docks. No general rule can be laid down for the area of anchorage space, for this is governed by the local conditions at each port. When the natural harbor bank does not give sufficient room for the commerce of a harbor, various methods are adopted for increasing this shore space. The most simple is to build out from the shore a series of piers or wharves with water spaces between them to form docks. When this is not practicable, quays are built which inclose dock basins. The nature of these two classes of structure is described in the article DOCK.

FIG. 7.

FIG. 8.

For a comprehensive treatise on harbors, consult: Douglas Oucré, *Harbors* (London, 1904); De Cordemoy, *Les ports modernes* (Paris, 1900); Vernon-Harcourt, *Harbors and Docks* (London, 1885); B. Cunningham, *Treatise on the Principles and Practice of Harbor Engineering* (Philadelphia, 1908); Edouard Boïn, *La condition économique et administrative des ports français* (Lille, 1909). The best descriptions of important recent harbor works will be found in the proceedings of engineering societies and in the engineering papers.

HARBOR. As judicially defined, a place to shelter ships from the violence of the sea, and where ships are brought for commercial purposes to load and unload goods and passengers. It includes quays or docks and other instrumentalities for the use and protection of ships. The term is generally considered a legal synonym for "haven" and "port," although at times it is employed in a somewhat narrower sense than either of these terms. It is not necessary, to constitute a harbor, that it be landlocked or absolutely safe for ships. It is enough that it affords a reasonably safe place of retreat from winds and storms.

In Great Britain the right to construct or control harbors is vested in the crown, but at present they are generally owned or managed by boards or commissions under special acts of Parliament. Even when an individual is the owner of a harbor, under a grant from the crown or by proscriptio, he holds it subject to the right of the public to make use of it and of the state to control it. The government has the power, also, of closing particular harbors or ports, either absolutely or to certain lines of imports or exports. It has the power, too, of regulating all harbor fees and the conduct of business transacted in harbors. At present the various boards or commissions are authorized by Parliament to make all needful regulations and, within certain limits, to fix the charges on goods and ships. It is their duty, on the other hand, to keep the harbors in a reasonably safe condition for those entitled to use them. If they do not, they are liable for any injury which results from their negligence. This rule does not obtain in harbors controlled directly by the government and known as the King's harbors. Here the maxim applies that "the King can do no wrong"; i.e., the state cannot be sued without its consent for injuries due to its negligence.

In the United States the development and control of harbors are shared to some extent by the Federal and the State governments, and in some instances are committed to the local municipal authorities. Large appropriations are frequently made by Congress for the improvement and defense of harbors, and the Federal government, under its power to regulate foreign and interstate commerce, exercises a large degree of control over most ports. On the other hand, the ownership of docks, wharves, warehouses, and other harbor facilities afforded to commerce, is generally a matter of State legislation. Each State, too, has its pilot laws, its quarantine rules, and its harbor regulations, with which the Federal government does not interfere, but which are subject to Federal laws so far as the subject—as quarantine, e.g.—is within the Federal jurisdiction.

A harbor master is a State official with extensive authority. He has power to regulate the times of landing, unloading, and loading vessels, to make room for such as need to be immediately accommodated by temporarily removing others, to collect harbor fees, to enforce obedience to his lawful orders, and, in certain cases, to settle disputes between the masters of vessels. In some States a board of harbor commissioners is provided for with large powers of control. Consult: Moore, *History of the Foreshore and the Law Relating thereto* (London, 1888); *United States Statutes at Large*, 1150, Act of March, 1899; Birdseye, *General Laws of New York—Navigation Law and New York Harbor* (New

York, 1901); W. W. Pierson, *Port Administration and Harbor Facilities* (Philadelphia, 1907); *Laws of the United States Relating to the Improvement of Rivers and Harbors, 1790-1907* (2 vols., Washington, 1907).

HARBOR GRACE, gräs. A town and port of entry on the west side of Conception Bay, Newfoundland, 26 miles (direct) west by north of St. John's and about 60 miles by rail, and on the Newfoundland Railroad (Map: Newfoundland, G 5). It has a large harbor, with a patent slip 260 feet long, and the wharves are protected by the beach. Its trade is nearly one-fourth that of the entire island. It manufactures boots, shoes, and oil. Pop., 1901, 5184; 1911, 4279.

HARBORING. In law, the act of receiving and retaining a person in violation of the rights of another or of the public. Harboring the wife of another after notice from the husband not to do so is an actionable wrong against him, unless such act is a proper one for her protection. So the harboring of an apprentice or servant, with knowledge of the latter's obligation to his master, is an actionable tort at common law. One who knowingly harbors a felon becomes at common law an accessory to the crime, while the intentional harboring of one who has committed a misdemeanor is punishable as a conspiracy to defeat justice. An innkeeper who is accustomed to harbor thieves is indictable at common law for maintaining a public nuisance. Some modern statutes make it criminal for any one to harbor thieves, i.e., to shelter them or permit them to congregate on his premises. Other statutes impose a penalty for harboring seamen, knowing them to be deserters from a vessel. Under such statutes, and generally, the offense of harboring does not necessarily involve the element of secrecy or concealment. It is committed by merely sheltering or entertaining the prohibited person or permitting him to take refuge under one's roof. See ACCESSORY; HUSBAND AND WIFE; MASTER AND SERVANT; PARENT AND CHILD; and authorities there cited.

HARBOR MASTER. See HARBOR.

HARBORNE, WILLIAM (c.1545-1617). An English traveler and diplomat, the first English Ambassador to Turkey, born at Yarmouth. In 1575 he was elected to Parliament, but was not allowed to take his seat, and in 1577 he went to Turkey. Five years afterward he was appointed Ambassador to that country. The Turkey Company, formed in 1579, received, through his efforts, larger privileges than any other chartered company. He left Constantinople in 1588 and died at Mundham. An account of his journey from Constantinople in 1588 was printed in Hakluyt's *Collection of Voyages*, as well as the description of his outward voyage.

HARBOR SEAL. The common seal (*Phoca vitulina*) of all northern seas, which formerly frequented numerously all the bays and harbors of the Atlantic coast as far south as Virginia, but now is uncommon south of Nova Scotia. Stragglers, nevertheless, are still seen at long intervals in the Hudson and even in the Delaware rivers, where they once regularly ascended as far as tidewater went. It is still numerous in the St. Lawrence and has been taken in Lake Champlain. The leopard seal of the Pacific coast (south to southern California) is the same and has been known to ascend the Columbia 200 miles. This seal attains a total length of about

5½ feet and a weight of from 80 to 100 pounds. Brownish yellow with dark spots is the commonest color, but many variations occur, such as almost uniform dark brown, nearly black, and dark spotting on a light ground, or the reverse. It is distinct in habits from other seals, with which, in the North, it never associates on the ice floes, but remains by itself on or near the shore, where it ascends the Arctic rivers almost to their sources in pursuit of the salmon. Hence it is known to seamen as the "fresh-water" seal. The white skins of the young seals are regarded by the northeastern Eskimo as the best and prettiest material from which to make undergarments and the jackets of women and children. This is the common seal of northern Europe and the British Islands. It is often captured young and petted and trained, when it shows great docility and affection, and its tricks are frequently exhibited in public shows.

HARBOR SPRINGS. A village of Emmet Co., Mich., 5 miles north by west of Petoskey, on Lake Michigan and on the Grand Rapids and Indiana Railroad and on several steamship lines (Map: Michigan, D 3). It is a favorite summer resort, attracting annually some 50,000 persons, many of whom have homes in the vicinity. It has an excellent landlocked harbor which furnishes anchorage to many vessels. There are here a Catholic Indian school, a government lighthouse, an Indian mission, established in 1695, and several other places of historic interest. The principal manufactures are lumber in various products. The water works and electric-light plant are owned by the village. Pop., 1900, 1643; 1910, 1805.

HARBURG, här'burk. The capital of a district in the Prussian Province of Hanover, situated on an arm of the Elbe, over which are built a railroad and a street bridge on the road to Hamburg, which is 7 miles to the north (Map: Prussia, C 2). The most noteworthy building of the town is the old castle on the Elbe. Harburg has a Realgymnasium, several industrial and commercial schools, and a theatre. This place of industrial activity numbers among its products sulphur, petroleum, saltpetre, mineral water, art objects, brushes, lumber, textiles, jute, linseed and coconut oil, gutta-percha and rubber goods, leather, cement, glass, machinery, and boilers. It is headquarters of a forest district and is connected by rail with Hamburg, Cuxhaven, and Bremen, and with Hamburg also by an electric street railway, and has a growing trade in groceries, wine, oil, coal, timber, etc. Harburg obtained municipal rights in 1297, belonged to Lüneburg and Hanover, and passed to Prussia in 1866. The Commune of Eisendorf was incorporated with Harburg in 1910. Pop., 1900, 49,153; 1910, 67,025.

HARCOURT, här'kört or här'kert, RICHARD (1849-). A Canadian lawyer and statesman. He was born at Seneca, Haldimand Co., Ontario, and was educated at Toronto University. He taught and was public-school inspector for Haldimand, was called to the Ontario bar in 1876, and having been elected (1878) a Liberal member of the Ontario Legislature, retained his seat in that body for 30 years. He was Provincial Treasurer in 1890-99 in the administrations of Sir Oliver Mowat (q.v.) and Arthur Sturgis Hardy (q.v.), and in 1899-1905 Minister of Education in the administration of Sir George William Ross (q.v.). In 1904 he was a delegate to the Educational Congress at

St. Louis, Mo. He was made a senator of Toronto University. After 1905 he resumed the practice of law in Welland.

HARCOURT, SIMON, first EARL (1714-77). An English diplomat and statesman. He was the only son of the Hon. Simon Harcourt, who died in 1720. On the death of his grandfather, Simon, first Viscount Harcourt, in 1727, he succeeded to the family titles and estates. After an education at Westminster School and four years of foreign travel, he was appointed lord of the bedchamber to George II. In 1745 he raised a regiment for defense of the kingdom against the rebels and in 1749 was advanced to the dignity of Earl. Harcourt was appointed governor to the Prince of Wales, afterward George III, but resigned owing to his dislike of the absolutist principles in which the young Prince was instructed. Promoted to be lieutenant general in 1759, he was appointed in 1761 special ambassador to demand the hand of the Princess Charlotte in marriage for the young King, who had succeeded to the throne in 1760. He was made Ambassador to Paris in 1768 and Lord Lieutenant of Ireland in 1772. By a proposal to tax the rents of absentee landlords, he gained much popularity in that country, but the proposal was rejected by the Irish Parliament, which was swayed by English opinion. There was much official corruption during his term as Lord Lieutenant. He resigned in January, 1777, and died September 16 of the same year.

HARCOURT, SIMON, first VISCOUNT (c.1661-1727). An English statesman, born at Stanton Harcourt, and educated at Pembroke College, Oxford. He studied law in the Inner Temple and was admitted to the bar in 1683. He was elected as a Tory member of Parliament in 1690, in 1705, in 1708, but was unseated, and again in 1710. In 1701 the House of Commons selected him to impeach Lord Somers at the bar of the House of Lords; in 1702 he was appointed Solicitor-General and was knighted; and in 1707 and 1710 he was Attorney-General. Becoming Lord Keeper of the Great Seal and member of the Privy Council in 1710, he presided over the House of Lords, although it was a year later that he was created Baron Harcourt. In 1713 he was Lord Chancellor. He obtained the acquittal of the Earl of Oxford in 1717, was created Viscount and readmitted to the Privy Council in 1722, and procured the pardon of Lord Bolingbroke in 1723. Consult: Burnet, *History of my Own Time* (London, 1833); Foss, *Judges of England*, vol. viii (ib., 1870); Campbell, *Lives of the Lord Chancellors* (New York, 1874-75); *Dictionary of National Biography*, vol. xxiv (London, 1890).

HARCOURT, WILLIAM, third EARL (1743-1830). An English field marshal. His military career began at the age of 16, when he took command of a troop raised at his father's expense and known as Harcourt's Black Horse. He was aid-de-camp to Lord Albemarle at the siege of Havana (1762), but returned home to represent Oxford in Parliament (1768-74). He was a lieutenant colonel of dragoons in the American Revolutionary War and distinguished himself in the capture of Gen. Charles Lee, near the Delaware. During the war in Flanders he was raised to the command of the Duke of York's cavalry (1795), was made a general the following year, as well as head of the Royal Military College, Great Marlow, a position he held from its opening until 1805, and he was

created field marshal on the occasion of the coronation of George IV.

HARCOURT, SIR WILLIAM GEORGE GRANVILLE VENABLES VERNON (1827-1904). An English statesman. Descended from the Plantagenet royal family, he was born at York, Oct. 14, 1827. After nine years of preparation as the pupil of Canon Parr, he entered Trinity College, Cambridge, in 1846 and graduated in 1851 with a first-class in classics and as senior optime in the mathematical tripos. He studied law at Lincoln's Inn, began the practice of his profession in 1854, and in 1866 was appointed queen's counsel. From 1855 to 1859 he wrote continuously for the *Saturday Review*, and during the American Civil War he wrote to the *Times*, over the signature *Historicus*, a number of letters, in which with telling arguments he opposed the recognition of the Southern States as belligerents. From 1868 to 1880 Harcourt represented Oxford in the House of Commons; from 1880 to 1895, Derby; and from 1895 until his death West Monmouthshire had him as a representative. His principles were thoroughly liberal. His election to the professorship of international law in the University of Cambridge in 1869 is evidence of scholarship in his special field of study; so, too, was his appointment to the royal commission for amending the neutrality laws and to the royal commission for amending the naturalization laws. In 1873 he was appointed Solicitor-General and was knighted. He was Secretary of State for the Home Department (1880-85) and Chancellor of the Exchequer (1886 and 1892-95). As Home Secretary, he introduced in 1884 an important bill for the reform of the municipal government of London. The budget which he, as Chancellor of the Exchequer, presented in 1894 made the income tax considerably more graduated, and reformed the "death rates." This budget is often mentioned as his greatest work. On the retirement of Gladstone in 1894 Harcourt became leader of the Liberal party in the House of Commons, but his views were often at variance with those of the Prime Minister, Rosebery, and on this account he retired in December, 1898, and subsequently freely criticized the government. He died at Nuneham, Oxfordshire, Sept. 30, 1904. Consult: McCarthy, *A History of our Own Times* (London, 1879-80) and *British Political Portraits* (New York, 1903); Morley, *The Life of William Ewart Gladstone* (ib., 1903); Paul, *A History of Modern England* (ib., 1906); Armstrong, in *The Dictionary of National Biography*, vol. ii, 2d supp. (ib., 1912).—His son, LEWIS HARCOURT (1863-), succeeded to his father's seat in the House of Commons in 1904, became Privy Councillor in 1905, from 1905 to 1910 was First Commissioner of Works, and accepted a seat in the Asquith cabinet in 1910 as Secretary of State for the Colonies. He married Miss Mary Ethel Burns, of New York City, in 1899.

HARCOURT, WILLIAM VERNON (1789-1871). An English scientist and clergyman, born at Sudbury, Derbyshire. After serving five years in the navy at the West Indian station, he entered Christ College, Oxford, in 1807, graduated in 1811 (M.A., 1814), and took up clerical duties at Bishopthorpe, Yorkshire. He became interested in chemistry while at Oxford; subsequently he had a private laboratory constructed, and in 1824 his scientific achievements earned him election as fellow of the Royal Society. At

the first meeting of the British Association for the Advancement of Science, held in 1821, Harcourt as secretary drew up plans of proceedings and laws, thus becoming virtual founder of the society, and in 1839 he was elected its president. Meanwhile he continued his pastoral work, becoming canon of York in 1824, rector of Wheldrake, Yorkshire, in 1824, and of Bolton Percy, Yorkshire, in 1837. He also established the Castle Howard Reformatory and the Yorkshire School for the Blind.

HARDANGER (här'däng-är) **FIORD**. An inlet of the Province of South Bergenhus, Norway, on the southwest coast (Map: Norway, C 7). It is about 68 miles long and extends northeastward and south, encircling the Folgefond. With a regular steamboat service it is a notable visiting place for summer tourists, owing to its wild and picturesque scenery, embracing mountain peaks, many tributary fiords, lofty cliffs, waterfalls, and on the east the Hardanger Fjeld, an elevated ice-clad plateau. The principal stations maintain hotels. The narrow strips of well-cultivated land along the shores are densely populated by the Haranger, a people distinguished for their interesting national customs and dress.

HARD CASH. See **VERY HARD CASH**.

HARD CASTLE. A family, the members of which are principal characters in Goldsmith's *She Stoops to Conquer*.

"HARD CIDER CAMPAIGN." See **HARRISON, W. II.**

HARD CLAM, or **ROUND CLAM**. The quahog. See **CLAM**.

HAR'DECANUTE, **HARDACNUT**, or **HARTHACNUT** (c.1019-42). King of England and of Denmark. He was the son of Canute the Great and Emma of Normandy and at the time of his father's death (1035) was ruling as underking in Denmark. Canute had intended the crown of England for Hardecanute, but the English Witan decided that his half brother Harold should be King of the North, and Hardecanute should have only Wessex. As Hardecanute neglected to take possession of his kingdom, it passed to Harold in 1037. On the latter's death, however, in 1040, Hardecanute was chosen King of England by the Witan. He arrived in England with a fleet of 60 ships, for the maintenance of which he extorted a heavy *danegeld*. He was coarse and violent in his habits and unscrupulous in the means he adopted for the establishment of his power. His reign was peaceful. He died June 8, 1042, at the marriage banquet of one of his nobles, and with him ended the Danish line in England. He was succeeded by his half brother, Edward the Confessor (q.v.). Consult: Freeman, *The Norman Conquest*, vol. i (Oxford, 1872); Oman, *England before the Norman Conquest* (New York, 1910); Hodgkin, *History of England from the Earliest Times to the Norman Conquest* (London, 1906).

HAR'DEE, WILLIAM JOSEPH (1815-73). An American soldier, prominent on the Confederate side in the Civil War. He was born in Savannah, Ga., graduated at West Point in 1838, and served with distinction through the Seminole and Mexican wars. At the outbreak of the Civil War he resigned from the United States army to accept a commission as colonel in the Confederate service, and during the first year of the war held various commands in the West. The next spring he commanded a corps in the Army of Mississippi, and at Shiloh, April 6,

1862, led the first Confederate line of battle. During Bragg's invasion of Kentucky in the following September he commanded the left wing of the invaders and later took a prominent part in the battles of Perryville and of Murfreesboro. By this time he had attained the rank of lieutenant general. In the summer of 1863 he was placed in charge of the defense of Mississippi and Alabama, but rejoined the army in time to command his corps at the battle of Missionary Ridge. Soon after this, Dec. 2, 1863, he succeeded General Bragg in command of the Army of Tennessee, but was himself replaced by Polk on December 23, who, however, gave way to Joseph E. Johnston on December 27. Under General Johnston, Hardee fought through the Atlanta campaign, and after the fall of Atlanta was assigned to the command of the Department of South Carolina, Georgia, and Florida. His forces, largely composed of the local militia, were unable to make any effectual opposition to Sherman's march to the sea; and it was only by good generalship that Hardee was able to escape from Savannah before the Federal forces had completed its investment. He thereupon retreated northward through the Carolinas and effected a junction with Johnston, under whose command he continued to serve until that general surrendered on April 26, 1865. After the war he became a planter at Selma, Ala. He was the author of *Hardee's Tactics*, a manual said to have been drawn largely from French sources.

HARDELOT, är'd-lô', Guy d' (?-). The professional name of Mrs. Helen d'Hardelot Rhodes, a French-English song composer. She was born at Hardelet Castle, Pas de Calais, France, of French, English, and Irish ancestry, was educated in Paris, and studied music there at the Conservatoire with Renaud Maury. She accompanied Madame Calvé on a six months' tour of the United States in 1896. Afterward, having married an Englishman, she made London her home. Her songs are pleasing and melodious without depth or originality. When Melba, Calvé, and Plançon sang them, they enjoyed for a time great popularity.

HARDEN, MAXIMILIAN (1861-). A German journalist and author, born in Berlin. After a secondary education he became a contributor of essays and critiques on subjects of literature and the drama to the *Frankfurter Zeitung*, the *Gegenwart*, and the *Nation*. He first attracted attention by a series of articles on social and political topics, published originally in the *Gegenwart*, with the signature Apostata, and subsequently in two volumes, with the title *Apostatu* (1892). In 1892 he established the *Zukunft*, a very successful weekly, and in 1896 published *Theater und Literatur*. His individual and witty Heinesque style and his unreserved expressions of opinion, especially against Caprivi, made him *persona non grata* to the government. In 1889 he was active with Otto Brahm in establishing a Free Theatre in Berlin. In 1900 he was condemned to six months' imprisonment on the charge of *lèse-majesté*. *Kampfgenosse Sudermann* (1903) is a bitter attack on the noted dramatist. He published also *Köpfe* (new ed., 3 vols., 1910-13).

HARDENBERG, här'den-bêrk, ALBERT (1510-74). A Dutch theologian, whose real name was Rizäus, but who is usually called Albert Hardenberg, from his birthplace in Holland. In 1517 he entered a monastic school and about 1530 went to Louvain, where he soon developed a

distaste for scholastic theology. At Mainz, where he went to study, he met Johannes Alasco (q.v.) and was turned to Protestant ideas. He returned to Louvain and preached the Reformation in a very mild form, but was forced to leave the city. He taught at Aduard for three years (1540-43) and then, through the efforts of Alasco and of Melancthon, left the Roman church and went to Wittenberg (1543). Afterward he came under the protection of the Archbishop of Cologne, who was friendly to the Reformation, and was settled as pastor at Kempen. He is best known in Church history for his opposition to Luther's doctrine of ubiquity and for his attempt to introduce Calvinistic tenets on the nature of the elements in the sacrament. In 1561 he went to Bremen, then to Sengwarden, and in 1567 to Emden, where he died. Consult Spiegel, *Dr. Albert Rizäus Hardenberg* (Bremen, 1869).

HARDENBERG, FRIEDRICH VON. A German lyric poet. See NOVALIS.

HARDENBERG, här'den-bêrk, KARL AUGUST, PRINCE (1750-1822). A Prussian statesman, born at Essensröde, in Hanover, May 31, 1750. He was educated at Leipzig and Göttingen and in 1776-78 traveled in France, Holland, and England. On his return to Hanover he became Councilor of the Privy Chamber and was raised to the rank of Count; but a private quarrel with a member of the royal family induced him, in 1782, to quit the Hanoverian service. He took up his residence at the court of Brunswick, where the Duke appointed him, in 1787, President of the Council of State. Soon afterward he was sent on a diplomatic mission to Frederick William II of Prussia, who received him with marked distinction. In 1790 the Margrave of Ansbach and Bayreuth requested the Prussian monarch to furnish him with a person competent to administer the affairs of his dominions, and Frederick William recommended Hardenberg. When Ansbach and Bayreuth were united with Prussia in 1791, Hardenberg was appointed Minister of State and a member of the cabinet. At the commencement of the war with France the King summoned him to his headquarters at Frankfort-on-the-Main as administrator of the army. Early in 1795 he was sent to Basel, where on April 5 he concluded a peace between Prussia and the French Republic. After the accession of Frederick William III, Hardenberg was recalled to Berlin (1798) and was intrusted with the partial management of foreign affairs. In 1804 he became first Prussian Minister on the resignation of Haugwitz, and in this capacity endeavored to keep Prussia neutral in the war between France and England. Nevertheless, by the victory of Napoleon at Austerlitz, Prussia was compelled to enter into an alliance with Napoleon in the winter of 1805-06. Hardenberg was deprived of his office in April, 1806, and Haugwitz, who was friendly to the French, returned to power. Prussia was driven in the same year to take up arms against Napoleon. After the fatal battle of Jena, Hardenberg accepted the portfolio of Foreign Affairs, which he held for a few months only, Napoleon, who considered him the chief opponent of France in Prussia, demanding his dismissal at the Peace of Tilsit. In 1810 he was appointed Prussian Chancellor. Hardenberg now proceeded to carry out Stein's plan for a regenerated Prussia through the enactment of radical and far-reaching reforms. The victories of the British troops

in the Spanish peninsula, and the disasters that overwhelmed Napoleon's vast army in Russia, made it possible for Hardenberg to realize his patriotic efforts, and he had the satisfaction of seeing his plans crowned with success. The War of Liberation freed Prussia. Hardenberg subscribed to the Peace of Paris, May 30, 1814, and was soon after raised to the rank of Prince by his sovereign. He accompanied the allied sovereigns to London and took part in the proceedings of the Congress at Vienna and in the conferences at Paris (1815). In 1817 he reorganized the Council of State, of which he was appointed President. He was present at the meetings of the monarchs of the Holy Alliance at Karlsbad, Laibach, Troppau, and Verona. His later policy showed reactionary tendencies, however, and lost him much of his previous popularity. Germany lost her illusions about him and came to feel he was subservient to Metternich. During a tour through the north of Italy he was taken suddenly ill at Pavia and died at Genoa, Nov. 26, 1822. The services rendered by Hardenberg to his country were great; to him, next to Stein, Prussia is indebted for the improvements in her army system, the abolition of serfdom and feudal burdens, the throwing open of the civil service to all classes, and the complete reform of the educational system. Hardenberg's *Memoirs, 1801-07*, were suppressed until 50 years had elapsed, and were then edited with a biography by Ranke, *Denkwürdigkeiten des Fürsten von Hardenberg* (5 vols., Leipzig, 1877). Consult also: Klose, *Leben Karl Augusts, Fürsten von Hardenberg* (Halle, 1807); Meier, *Die Reform der Veraltungsorganisation unter Stein und Hardenberg* (Leipzig, 1881); Seeley, *Life and Times of Stein* (London, 1879); Chr. Meyer, *Hardenberg und seine Verwaltung der Fürstentümer Ansbach und Bayreuth* (Breslau, 1892); Koser, *Die Neuordnung des preussischen Archivwesens durch die Staatskanzler Fürsten v. Hardenberg* (Leipzig, 1904).

HARDENBERGH, här'den-bërg, HENRY JANEWAY (1847-1918). An American architect. He was born at New Brunswick, N. J., and studied architecture (1865-70) under Detlef Lienau in New York City, where he entered practice. Among the notable buildings erected from his designs are the Waldorf-Astoria, Manhattan, and Plaza hotels, and the American Fine Arts Society Building—all in New York. He became a member of the National Institute of Arts and Letters, and associate of the National Academy in 1910. He was one of the founders of the American Fine Arts Society and of the Municipal Art Society.

HARDEN-HICKEY, JAMES ALOYSIUS (1864-98). An American adventurer and journalist, called a baron. He was born in San Francisco, but at the age of 23 settled in Paris, where he started a paper called the *Triboulet*, so conspicuous for its strong satirical attacks upon the government that it was suppressed in about two years (1880). The editor had also been drawn into duels with other journalists, but his literary activity continued unabated, and under the nom de plume "Saint-Patrice" he published: *Un amour dans le monde* (1877); *Mémoires d'un gommeux* (1877); *Près du gouffre* (1877); *Sampiero* (1878); *Lettres d'un Yankee* (1879); *Aventures merveilleuses de Nabuchodonosor Nosbreaker* (1880); *Les faoties de Trognoville* (1883); *Nos écrivains* (1888); *La théosophie* (1890); *Plagiats bibliques* (1891).

HARDERWIJK, här'dër-wik. A small seaport and fishing town of the Netherlands, situated on the southeastern shore of the Zuyder Zee, 28 miles east of Amsterdam (Map: Netherlands, D 2). It is a fortified town and a recruiting station for the Dutch East India troops. The chief exports are grain, lumber, and fish. Pop., 1900, 7425; 1910, 7415. The fifteenth-century parish church possesses a remarkable square tower. Harderwijk was a Hanse town and from 1648 to 1811 was the seat of a university.

HARDESTY, IRVING (1866-). An American anatomist. He was born at Beaufort, N. C., graduated in 1892 from Wake Forest College (North Carolina), and gained his Ph.D. in 1899 at the University of Chicago, where he was an associate in anatomy (1899-1900). He served as principal of Wakefield Academy in 1892-93, taught at the University of Missouri in 1895-96, and at the University of California, where he rose to be associate professor in 1906; and in 1909 he became professor of anatomy, in charge of the department, at Tulane University. Besides his researches on the nervous system, he published: *Neurological Technique* (1902); "The Nervous System," part iii of Morris's *Human Anatomy* (1907, 1914); *A Laboratory Guide for Histology* (1908).

HARDHACK. See SPIRÆA.

HARDHEAD. A fish. 1. See HALFBREAK. 2. See STEELHEAD. 3. A sailors' name for the California gray whale (q.v.), said to be due to its propensity for striking and upsetting the whalers' boats with its head.

HARDICANUTE. See HARDECANUTE.

HARDIE, JAMES ALLEN (1823-76). An American soldier, born in New York City. He graduated at West Point in 1843 and during the Mexican War was the military commandant of San Francisco. During the Peninsular, Maryland, and Rappahannock campaigns of the Civil War he was acting adjutant general of the Army of the Potomac, and on Nov. 29, 1862, was commissioned brigadier general of volunteers. In 1863 he was appointed assistant adjutant general with the rank of major on the staff of the regular army, and on May 24, 1864, was made inspector general with the rank of colonel. On March 13, 1865, he was brevetted a major general in the regular army.

HARDIE, JAMES KEIR (1856-1915). An English labor leader, born in Scotland. He worked in the coal mines from the age of 7 to 24, was elected secretary of the Lanarkshire Miners' Union, and edited the *Cummock News* (1882-86) and the *Labour Leader* (1887-1903). In 1893 he founded the Socialistic Independent Labor party. He was elected to Parliament from South West Ham in 1892, suffered defeat in 1895, was chosen from Merthyr Tydvil in 1900, and was reelected in January, 1906. After that election (see POLITICAL PARTIES, Great Britain) he became leader of the Labor party in the House of Commons. He visited and lectured in India and Australia in 1907, in the United States in 1909, and in Canada in 1912. In 1913-14 he was chairman of the Independent Labor party. He is author of *Labour Politics: A Symposium* (1903); *From Serfdom to Socialism* (1907); *India: Impressions and Suggestions* (1909); *After Twenty Years: All about the Independent Labour Party* (1913).

HARD'ING, CHESTER (1792-1866). An American portrait painter. He was born in

Conway, Mass., but removed at 12 with his father to western New York, then a wilderness. He grew up a pioneer, of splendid physique, and in 1812 enlisted in the army as a drummer. He then tried various pursuits, including keeping a tavern, and finally went to Pittsburgh, where he was engaged as a house painter. At this time he took up portrait painting, and set up as a portrait painter, entirely self-taught, at Paris, Ky. After a short time spent in study at Philadelphia he spent successful seasons at St. Louis and Washington. In 1823 he established a studio in Boston, where he enjoyed great popularity. In 1832 he went to London, where he experienced the same remarkable success, and during a stay of three years he painted the portraits of many prominent Englishmen, including Rogers the poet, Alison the historian, the dukes of Sussex and Hamilton, and Lord Aberdeen. After his return his headquarters were Boston, but he practiced also in other American cities. Among his many friends was Daniel Webster, portraits of whom by Harding hang in the Bar Association, New York, and in the Cincinnati Museum. Among his principal portraits are those of Washington Allston, John Randolph (Corcoran Gallery, Washington), General Sherman, Henry Clay, John C. Calhoun, Chief Justice Marshall, Charles Carroll, and Presidents Madison, Monroe, and John Quincy Adams. They are powerfully characterized, though deficient in technique. Consult *My Egotistography*, by the Artist (Cambridge, 1866); edited with additions by his daughter, M. E. White, under the title *Chester Harding: A Sketch by his own Hand* (Boston, 1890).

HARDING, hār'dīng, KARL LUDWIG (1765-1834). A German astronomer, born at Lauenburg. He was educated at Göttingen, where he studied theology, and became a tutor in the family of Schröter in Lilienthal. Schröter was an enthusiastic astronomer, and soon (1800) Harding was appointed observer and inspector in his observatory. Here he discovered the third planetoid, Juno (1804). In 1805 he went to Göttingen as professor of astronomy and eight years afterward discovered, independently of Pons, the second comet of 1813. His published works include: *Atlas Novus Cælestis* (1808-23; reëdited by Jahn, 1856), for long the most complete astronomical chart; *Kleine astronomische Ephemeriden* (ed. with Wiessen, 1830-35); and the fifteenth in the series of Sternkarten of the Berlin Academy's publications (1830).

HARDING, STEPHEN (?-1134). The third abbot of the celebrated monastery of Cîteaux. Of his parentage and youthful history little is known beyond the fact that he was born at Sherborne, near Dorchester, England, of a respectable family, and in early life traveled first to Scotland, then to Paris, and later to Rome. On his way back he stopped at the Benedictine monastery at Molesme, near Dijon, Burgundy, and, joining the order, received the name of Stephen. He delighted in austerities and left the monastery with 20 companions, including the abbot and prior, in order that they might start a new monastery where the Benedictine rule should be strictly observed. Cîteaux (the cisterns), 15 miles south of Dijon, a barren and marshy spot, seemed attractive to the band, and there the monastery was built. In 1110 Stephen was elected its abbot. The rigor of observance which he enforced deterred novices from entering the new order, and when Stephen became abbot the

number of monks was very few; but he persevered, and was rewarded in 1113 by the accession of St. Bernard (q.v.) and 30 others, who gave such an impulse to the institute that in a short time the number of claimants for admission compelled him to found several new convents, and especially that of Clairvaux (1115), which, under the rule of St. Bernard, attained to the very highest distinction in that age. Stephen continued till his death, at Cîteaux, March 28, 1134, to direct the fortunes of the Cistercian Order. In 1119 he drew up, in conjunction with St. Bernard and other members of the brotherhood, the well-known constitutions of the order, entitled the *Charter of Charity*, which were approved by Popes Calixtus II and Eugenius III and with modifications continued to modern times as the rule of the Cistercian institute. See CISTERCIANS.

HARDING, WARREN G. (1865-1923). Elected President of the United States in November, 1920. He was born at Corsica, Morrow County, Ohio, Nov. 2, 1865, and studied at the Ohio Central University. Entering the newspaper business, he became editor and publisher of the Marion (Ohio) *Star*. He ran for the office of governor in Ohio in 1910, but was defeated. In 1914 he was elected a Republican member of the United States Senate for the term of 1915-21. He nominated Mr. Taft in 1912 and was chairman of the Republican Convention in 1916, making the keynote speech. In politics he belonged to the "stand pat" element which was bitterly opposed to the "insurgents" led by Roosevelt. In the treaty fight he was a strong supporter of Senator Lodge. Although he was considered a candidate for the Republican nomination for the presidency in 1920, his ultimate selection was somewhat of a surprise to the people at large. See UNITED STATES and SUPPLEMENT.

HARDINGE (hār'dīng) OF LAHORE, HENRY, first Viscount (1785-1856). An English field marshal and commander in chief born in Kent, on March 30, 1785. After a brief education at Eton he was gazetted as ensign to the Queen's Rangers in Upper Canada before he had attained his fifteenth year. In 1800-07 he studied with success at the Wycombe Royal Military College. He obtained a brigade command in Spain before his twenty-fifth year, after which he was attached to the Portuguese army from 1809 to 1813 in the capacity of deputy quartermaster-general. He was wounded in the battle of Vimiera; he saved the day for the British at Albuera; he was wounded again at Vittoria, but was able to take part in the actions of the Pyrenees, Nive, and Nivelle. On Napoleon's return from Elba, Hardinge joined the allied armies in Belgium and was appointed by the Duke of Wellington commissioner at the Prussian headquarters. He lost his left hand at Ligny and was unable to participate in the victory of Waterloo. He entered Parliament as a member for Durham in 1820, was four times reëlected by the same constituency, and from 1832 to 1844 was a member for Launceston. In 1828 he succeeded Lord Palmerston as Secretary for War, and he held the same office again in 1841-44. He was Secretary for Ireland in 1830 and in 1834-35. From 1844 to 1847 he was Governor-General of India. When the Sikh War broke out, he hurried to the northwestern frontier of India and served as second in command under Lord Gough during the battles of Mudki, Perozeshah,

and Sohraon. After the pacification of Lahore his services were rewarded by a viscounty, the East India Company granting him a pension of £5000, and Parliament voting him an annuity of £3000 for himself and his next two successors. On the death of the Duke of Wellington in 1852, Hardinge was appointed commander in chief of the British army and filled the home command during the Crimean War. He resigned through illness a few months before his death. The 18th of October, 1855, he was advanced to the rank of field marshal. He died Sept. 24, 1856, at his seat, South Park, near Tonbridge, Kent. Consult *Viscount Hardinge and the Advance of the British Dominions into the Punjab*, by his son, Charles, second Viscount Hardinge (Oxford, 1900).

HARDINGE OF PENSURST, CHARLES, first BARON (1859-). A British colonial official, educated at Harrow and at Trinity College, Cambridge. Entering the diplomatic service in 1880, he became connected with the Legation at Teheran in 1892, served from 1898 to 1903 as Secretary of the British Embassy at St. Petersburg, to which, after a short interval as Assistant Undersecretary of State for Foreign Affairs, he returned to be Ambassador in 1904-06. For the next four years he was Undersecretary of State for Foreign Affairs, and in 1910 he became Viceroy of India, in the same year being created Baron. He was honored with the decorations of many continental orders and with the chain of the Victorian Order in 1912. On Dec. 22, 1912, his state viceroyal entry into Delhi was disturbed by the throwing of a bomb which was intended for the Viceroy and killed an attendant. It was during Baron Hardinge's viceroyalty that King George V and Queen Mary visited India, and the famous "durbars" was held at Delhi in December, 1911.

HARD LABOR. A statutory penalty which may be imposed on persons convicted of felony or certain other prescribed offenses, as an addition to the penalty of imprisonment. As a form of punishment, hard labor was unknown to the common law, though a sentence to penal servitude rendered a convict liable to the performance of such labor as the prison officials saw fit to require of him. Accordingly imprisonment with hard labor, being a purely statutory penalty, can never be legally imposed as a sentence in lieu of the ordinary imprisonment, except in the cases and to the extent expressly authorized by the statutes providing for its imposition. It was introduced in England by Act of Parliament in 1830 (11 Geo. IV and 1 Wm. IV, c. 30, § 7) which provided that the crown might commute a sentence of death to imprisonment with or without hard labor. In 1891 the Penal Servitude Act (54 and 55 Vict., c. 69, § 1) empowered a court to substitute for a sentence of penal servitude a sentence of imprisonment with or without hard labor. In the United States imprisonment with hard labor is generally authorized by Federal as well as by State legislation, in most cases where the convicted criminal is subject to imprisonment in a State prison or penitentiary. The kind and amount of labor required of the sentenced criminal are regulated by statute or by prison rules. Consult: Stephen, *History of the Criminal Law of England* (London, 1883); *Encyclopædia of the Laws of England; United States Revised Statutes*, 5542. See PUNISHMENT; IMPRISONMENT.

HARDMAN, FREDERICK (1814-74). An

English novelist and journalist. He was the son of Joseph Hardman, a London merchant, but, disliking the life in a counting house for which his father intended him, went to Spain in 1834 and served against the Carlists. In 1840 he began contributing to *Blackwood's Magazine* and after 10 years of literary work became foreign correspondent of the *London Times*. Among his works are various sketches and stories reprinted from *Blackwood's Central America* (1852); and a translation of Weiss's *History of the French Protestant Refugees* (1854).

HARDMOUTH. A fish. See CHISELMOUTH.

HARDNESS, SCALE OF. The hardness of a solid substance may be measured by its capacity for scratching, or being scratched by, other substances. The variations in degree of hardness presented by different minerals give valuable physical indications by which one mineral may be readily distinguished from others. The hardness of a given substance is generally determined with reference to a few well-known minerals, which form a standard "scale of hardness," as follows:

- | | |
|--------------|--------------|
| 1. Talc. | 6. Feldspar. |
| 2. Gypsum. | 7. Quartz. |
| 3. Calcite. | 8. Topaz. |
| 4. Fluorite. | 9. Sapphire. |
| 5. Apatite. | 10. Diamond. |

Talc is easily scratched by the finger nail; gypsum is not easily scratched by the finger nail; calcite has about the same hardness as coin copper; fluorite is not scratched by a copper coin and does not scratch glass; apatite scratches glass with difficulty and is easily scratched by a knife; feldspar scratches glass easily and is not easily scratched by a knife; quartz is not scratched by a knife and yields with difficulty to the file; topaz, sapphire, and diamond are all harder than flint.

As the advance of science has demanded a greater accuracy in the determination of hardness, instruments of precision, known as sclerometers, have, for scientific work, largely replaced the standard comparative scale of hardness. Sclerometers are of several types, but they consist in general of a point made of some hard substance which may, by a series of weights, be pressed against the mineral to be tested, the latter being mounted on a movable carriage. The hardness is measured either by noting the weight required to obtain a scratch, or by weighing the material removed by a given number of scratches under a fixed weight.

HARDOUIN, GASTON JOSEPH. See ANDLAU, COMTE D'.

HARDOUIN, ar'dwân', JEAN (1646-1729). A French classical scholar, born at Quimper, in Brittany. He early entered the Jesuit Order, for a time lectured on rhetoric, and in 1683 became librarian in the Lycée Louis le Grand, Paris. His attainments were notable, his vagaries profound. He prepared, for the Delphin Classics, an edition (1685) of the *Historia Naturalis* of Pliny the Elder, of which Huet observed, with some exaggeration, that Hardouin had accomplished in five years a task for which five other savants together would have required 50; and, on the other hand, he solemnly adduced theories which involved him in controversy with many of the chronologists and antiquaries of his time, and disagreement with all, and provoked his superiors to demand a public

recantation (1708). This curious archæologist declared that the greater part of the books commonly attributed to the ancients are in reality the work of Benedictine monks of the Middle Ages under the direction of a hypothetical Severus Archontius. He accepted as genuinely classic only Homer, Herodotus, Pliny the Elder, Cicero, the *Epistola* and *Satura* of Horace, and the *Georgics* of Vergil. In all other cases, he held, allusions to Christianity, references to historical events of the Middle Ages, or obvious allegory (as, e.g., the *Æneid*, which, in Hardouin's opinion, described the voyage of St. Paul to Rome and the proclamation of the gospel in Italy), determine a recent origin. Similarly, he urged, all coins and medals supposed to be of the antique world are the work of modern artists. He maintained also, despite all evidence, that no council of the Roman Catholic church was held previous to that of Trent. Hardouin's epitaph by Jacob Vernet, professor of theology at Geneva, well reads: "Hic jacet hominum paradoxotatos, . . . credulitate puer, audacia juvenis, deliriis senex." His further publications include the titles: *Nummi Antiqui Populorum et Urbium Illustrati* (1684); *Chronologia ex Nummis Antiquis Restituta* (1696); *Prolegomena ad Censuram Veterum Scripturum*; *Conciliorum Collectio Regia Maxima* (1714-15), an important work. Consult Debacker, *Bibliothèque des écrivains de la compagnie de Jésus* (2 vols., Liège, 1853-54).

HARD'PAN'. The hard stratum of earth beneath the layer of surface soil, especially noticeable in alkali soils (q.v.) and in certain acid swamp soils, forming in this case a hard ferruginous layer known in Europe as *ortstein*. Sometimes a hardpan is produced in arable lands by the pressing of the plow and the trampling of the team, in this case known as *plow sole*; but this may be prevented, or destroyed when formed, by plowing at varying depths.

"HARDS" or **"HARD SHELLS."** The name of a short-lived faction of the Democratic party in New York State. See **BARNBURNERS**; **HUNKERS**; **PARTY NAMES**.

HARD'TAIL'. The name sometimes applied to the yellow mackerel. See **JUREL**.

HARD TIMES. A novel by Charles Dickens, which appeared as a serial in *Household Words*, and was published in 1854.

HARDWAR, *hūr-dwār*, or **HURDWAR** (*Hari dīvara*, gate of Hari or Vishnu). A frontier town of the Saharanpur District, United Provinces, British India, one of the most famous spots on the Ganges (Map: India, D 3). It stands on the west bank of the river, at the mouth of a gorge where the waters emerge from the sub-Himalayas into the plains of Hindustan and at the head of the Ganges Canal (q.v.). From its position on the sacred stream it attracts immense numbers of pilgrims for the purposes of ablution. The chief feature is the Hari-ke-charan, or bathing ghat, with the adjoining temple of Gangadwara. The *charan*, or foot mark of Vishnu, imprinted on a stone let into the upper wall of the ghat, forms an object of special reverence. The orthodox pilgrim season comprises the end of March and the beginning of April. In ordinary years the attendance amounts to 100,000 to 150,000; but on the occasion of every twelfth year a feast of peculiar sanctity takes place; the visitors, from the commencement to the close of this festival, are stated to have averaged about 650,000.

Commerce mingles with religion in an annual fair, which possesses considerable mercantile importance, being one of the principal horse fairs in Upper India. Commodities of all kinds, Indian and European, find a ready sale, and the trade in grain and foodstuffs of the surrounding districts is considerable. The city is of great antiquity and was originally known as Kapila, or Gupila. Hardwar is 1024 feet above the sea, in lat. 29° 57' N. and long. 78° 14' E. Pop., 1901, 25,597; 1911, 26,179.

HARDWARE. A commercial term which includes an enormous variety of articles manufactured from iron, copper, brass, or bronze, and variously known as *carpenters'*, *housekeepers'*, or *builders'* hardware. It is almost impossible to classify the articles which come under the general term, including, as it does, implements and materials used by saddlers, miners, contractors, machinists, stationers, car builders, and furniture makers and dealers. Many toys and the limitless varieties of what are called "fancy" articles belong to this branch of manufacture, as indeed does almost any article not assignable to any other branch of trade. A typical hardware catalogue contains the list of a regular stock of many thousand articles and sizes and from time to time various supplements and discount sheets are issued for the use of customers. Until the latter half of the nineteenth century the United States was almost wholly dependent on England and Germany for its hardware. Such implements as were made at home were usually the work of the village blacksmith, who was an individual of the first importance in those days. The manufacture of American hardware in general began about 1850 and has increased till now the American product with its infinite variety is in many branches the standard for excellence the world over.

HARDWICK. A village in Caledonia Co., Vt., 22 miles north-northeast of Montpelier, on the St. Johnsbury and Lake Champlain Railroad (Map: Vermont, D 3). It is one of the largest building-granite centres in the world, having more than 40 plants in the vicinity, and there are also lumber and grist mills. The village contains a public library and a hospital, and owns its water works and electric-lighting plant. Pop., 1900, 2466; 1910, 3201.

HARDWICK, CHARLES (1821-59). An English clergyman of the Established church, born at Slingsby, Yorkshire. He was educated at Cambridge, was professor of divinity, Queen's College, Birmingham, 1853, and two years later lecturer on divinity at King's College, Cambridge. Soon after being appointed Archdeacon of Ely he was killed by falling over a precipice in the Pyrenees. He ranked high as a Church historian, his chief works being: *History of the Articles of Religion* (1851); *History of the Middle Age of the Church* (1853; 6th ed., by Dr. William Stubbs, 1888); *History of the Reformation* (1856; 9th ed., by Stubbs, 1888); *Christ and Other Masters* (4 parts, 1855-59; 3d ed., by Francis Proctor, 1874).

HARDWICKE, PHILIP YORKE, first **EARL OF** (1690-1764). A distinguished English judge and statesman, born at Dover. He was educated at a private school in Bethnal Green, was then apprenticed to a London solicitor, studied at the Middle Temple, and was admitted to the bar in 1715. The favor of Lord Macclesfield, together with his own talents and attractive personality, resulted in his rapid advance in the

profession. In 1719 he was elected a member of Parliament for Lewes and the following year for Seaford, which he represented until he became a peer. Within a few days after his first speech, in 1720, on the supremacy of the British over the Irish Parliament, he was appointed Solicitor-General, and three months later was knighted. In 1724 he succeeded to the attorney-generalship; in 1733 was appointed Lord Chief Justice of the King's Bench and was created Baron Hardwicke of Hardwicke, and in 1737 he became Lord Chancellor of England. Among the chief events of his long and active career were his coadministration of the government during the King's absences in 1740, 1748, and 1752; the punishment of Edinburgh for the Porteous riots in 1737; the pacification of Scotland after the Jacobite rebellion of 1744, where the wisdom displayed by him in the abolition of heritable jurisdictions was somewhat counterbalanced by his injudicious proscription of the tartan; and the loss of Minorca and the trial and execution of Byng. His is one of the great names in the distinguished history of the Court of Chancery, and it is largely to him that the system of equity jurisdiction owes the systematic and logical character which it assumed during the eighteenth century. In 1754 he was created Viscount Royston and Earl of Hardwicke, and two years later he retired into private life. Consult Harris, *The Life of Lord Chancellor Hardwicke* (3 vols., London, 1847).

HARDY, AR'DÈ, ALEXANDRE (c.1570-c.1631). A very fertile French dramatist, born in Paris. He is thought to have written 600 plays, of which 41 were printed (1624-28). Of these the best is *Mariamme*. He was an artisan rather than an artist and first appears in 1593 as author for a strolling company of actors. In 1599 he filled a similar place in Lecomte's company at the Parisian Theatre of the Hôtel de Bourgogne. Of his life little else is known. In his dramas he emancipated the stage from the scholarly mannerisms of Jodelle (q.v.) and became the founder of popular secular tragedy in France. The scenic traditions remained, but Hardy ignored the classic unities of time and place and soon discarded the chorus. Hardy had little stylistic or poetic talent, but he had dramatic tact and the instinct of stage effects, using old material freely for tragedies, tragicomedies, and pastorals, which, in freeing the French stage from the bondage of Latin, Spanish, or Italian models, made it an attractive field for literary men. Before Hardy's death Théophile had written his *Pyramus and Thisbe*, Racan his *Shepherd Plays* (*Bergeries*), Mairet his *Sylvie*, Gombaud his *Amaranthe* (1617-25)—all for the Hôtel de Bourgogne. He lived to see the first successes of Corneille (q.v.) and the first "regular" French tragedy, Mairot's *Sophonisbe* (1639). Hardy's *Works* have been republished in five volumes (Marburg, 1884). Consult Rigal, *A. Hardy et le théâtre français* (Paris, 1889), and *Le théâtre français avant la période classique* (ib., 1901).

HARDY, ARTHUR SHERBURNE (1847-). An American novelist, diplomat, and writer on mathematics. He was born at Boston, graduated at the United States Military Academy at the age of 22, and served for some time in the army. He was professor of civil engineering, Iowa College, from 1871 to 1873, received the degree of Ph.D. from Amherst in the latter year, then studied abroad, and held the chairs

of civil engineering (1874-78) and mathematics (1878-93) at Dartmouth. The latter position he resigned for the purpose of devoting himself to literary and diplomatic pursuits. He was United States Minister Resident and Consul General at Teheran, Persia (1897-99); Minister to Greece, Rumania, and Serbia (1899-1901); Minister to Switzerland (1901-02); and in 1902-06 was Minister to Spain. His mathematical publications include the following: *Elements of Quaternions* (1881); *New Methods in Topographical Surveying* (1884); *Elements of Analytic Geometry* (1888); *Elements of Calculus* (1890); and a translation of Argand's work on Imaginaries (New York, 1881). He is better known by his fiction, which includes: *But Yet a Woman* (1883); *The Wind of Destiny* (1886); *Passé Rosa* (1889); *His Daughter First* (1903); *Aurélié* (1912); *Diane and her Friends* (1914). He is also author of two poetical works, *Francesca of Rimini* (1878) and *Songs of Tiro* (1900), and of the *Life and Letters of Joseph Hardy Neesima* (1891).

HARDY, ARTHUR STURGIS (1837-99). A Canadian statesman. He was born at Mount Pleasant, Ontario, was educated at the grammar school of his native town and at Rockwood Academy, studied law, and was called to the bar in 1865. After a period of successful law practice he was made a Queen's counsel in 1876. He entered political life in 1873 and was returned as Liberal member for South Brant in the Ontario Legislature. In 1877 he was made Provincial Secretary and Registrar in the administration of Sir Oliver Mowat (q.v.), and in 1889 became Commissioner of Crown Lands. When Mowat became a member of the Dominion cabinet at Ottawa in 1896, Hardy succeeded him as Premier and Attorney-General of Ontario. In 1898 he was returned to power as Premier. He was an active and very efficient legislator and in his term of office introduced many reforming and simplifying measures, most of which were passed, relating to railways, courts and legal procedure, sanitation, and liquor licenses. In 1897 he was elected vice president of the British Association for the Advancement of Science.

HARDY, SIR CHARLES (c.1710-80). An English admiral. He was the son of Vice Admiral Sir Charles Hardy, entered the navy in 1730, and in 1737 was promoted to be a third lieutenant. After serving on several ships he was sent in 1744 in charge of a convoy to Newfoundland. In this he was unsuccessful and, having been blamed for the loss of part of the convoy, was court-martialed, but was acquitted. In 1745 he commanded a ship off the coast of Portugal, where he fought a severe though indecisive action with a French man-of-war. Appointed Governor of New York in 1755, and rear admiral of the blue the following year, he aided Admiral Boscawen in the siege and reduction of Louisbourg in 1758. He was second in command under Hawke during the blockade of Brest, and at the battle of Quiberon Bay was made vice admiral in 1762 and admiral in 1770. The most important event in Hardy's professional life was his appointment to the command of the Channel Fleet in 1779, when an invasion by the combined French and Spanish fleets was imminent. He had only 39 ships of the line against the enemy's 66; but the allied admirals declined to attack and returned to Brest.

HARDY, EDWARD JOHN (1849-1920). An

Irish clergyman and author. He was born in Armagh, was educated at Trinity College, Dublin, entered the Church in 1874, and from 1878 to 1908 was an army chaplain, seeing service all over the British Empire. His first and most famous book, *How to be Happy though Married* (1884), passed through many editions and translations. Among his other books are: *Manners Makyth Man* (1885); *Faint Yet Pursuing* (1886); *The People's Life of their Queen* (1896); *The Love Affairs of Some Famous Men* (1897); *Concerning Marriage* (1901); *Pen Portraits of our Soldiers* (1902); *John Chinaman at Home* (1905); *How to be Happy though Civil* (1909); *The Unvarying East* (1912); *Still Happy though Married* (1914).

HARDY, ERNEST GEORGE (1852-). An English classical scholar, born in Hampstead and educated at Exeter College, Oxford. In 1875 he became fellow of Jesus College, Oxford, of which (after several years as headmaster of Grantham School) he became tutor (1894) and then vice principal. Besides editions of texts for school use, he published a translation of Schömann's *Greek Antiquities* (1880); *Christianity and the Roman Government* (1894); *Jesus College* (1899); *Studies in Roman History* (1906); *Six Roman Laws* (1911), and *Roman Laws and Charters* (1912), translations with notes.

HARDY, GATHORNE. See CRANBROOK, first EARL OF.

HARDY, ROBERT SPENCE (1803-68). An English Wesleyan missionary and Buddhist scholar. He was born at Preston, Lancashire, the grandson of the noted Robert Spence, printer of York and friend of John Wesley. Entering the ministry in 1825, he was immediately appointed a missionary to Ceylon; in 1862 he became superintendent of the South Ceylon Mission. He was an honorary member of the Royal Asiatic Society and is remembered as the first exhaustively to set forth Buddhism to the western world. The languages of which he was master include Latin, Greek, Hebrew, French, Portuguese, Singhalese, Pali, and Sanskrit. His most important works are: *A Manual of Buddhism in its Modern Development*; *Translated from Singhalese Manuscripts* (1853); *Eastern Monachism: An Account of the Origin and Laws of the Order of Mendicants, Founded by Gautama Buddha* (1860); *William Grimshaice, Incumbent of Ilaworth* (1860).

HARDY, THOMAS (1840-). An English realistic novelist, born in Dorsetshire. At the age of 16 he was articled to an ecclesiastical architect in Dorchester. He studied for a time at King's College, London, and in 1863 received a prize from the Royal Institute of British Architects for an essay upon *Coloured Brick and Terra-Cotta Architecture*. He worked as an architect—especially in the Gothic school—under Sir A. Blomfield in London from 1862 to 1867, and though he deserted it for literature the following year, the influence of his early studies is left upon his writing. His desire for scientific precision sometimes leads him to the introduction of technical words and phrases, which mar the otherwise severe simplicity of his style. The architect is perforce the antiquary, and from the days when Hardy took professional excursions to different village churches to see if they were worth restoring, he steeped himself in the lore of his native county, which he calls Wessex.

His first publication was an article in *Chambers's Journal* (March, 1865), entitled *How I Built Myself a House*, and after an unsuccessful attempt, called *The Poor Man and the Lady*, which George Meredith advised him to reconsider, he brought forth his first novel, *Desperate Remedies* (1871), a crude and fantastic effort, but interesting as illustrative of the author's formative stage. He struck a surer note in *Under the Greenwood Tree* (1872), an idyllic love story, or, as the title-page has it, "A Rural Painting of the Dutch School." Here the lightness of touch is equalled in none of his later work. *A Pair of Blue Eyes* (1873) marked Hardy's progress in the study of the whimsicalities of womankind and their resultant tragedy; but *Far from the Madding Crowd* was the book which first gained him popular favor. While running as an anonymous serial in the *Cornhill Magazine* throughout the year 1874, it was attributed to George Eliot, not from any similarity of style, but because no other living author was considered capable of writing it. A farcical production, called *The Hand of Ethelberta: A Comedy in Chapters*, (1876), illustrated by George Du Maurier, preceded *The Return of the Native* (1878), the first really great work of Hardy and one which by some is even regarded as his masterpiece. By this time he had shaken off self-consciousness; invention had given place to imagination; and he was able to create dramatic characters and situations worthy of their inimitable stage setting, Egdon Heath. His description of that wild moorland, in the opening chapters, is a fitting introduction to the stormy lives that are mingled with it; and here the author's feeling for nature is most vividly illustrated. In *The Trumpet Major* (1880) he returned to his earlier manner of the *Greenwood Tree* and the *Madding Crowd* without attaining the graceful charm of the one or the strength of the other. Hardy is supreme in his own Wessex; here he exhibits, on the one hand, a high degree of sensibility to the delights of her rural life and, on the other, the keenest sympathy with the rustic point of view. When he forsakes the types of these regions, the result is not convincing. *A Laodicean* (1881) justifies the name, in being neither cold nor hot. The ironic tale *Two on a Tower* (1882) develops a very curious and complicated situation with much skill. But he is tethered to Wessex and paints more confidently on that background in *The Romantic Adventures of a Milkmaid* (1883) and in the *Mayor of Casterbridge: The Life and Death of a Man of Character* (1886), a title which is no misnomer. Henchard, the hero, is a strongly drawn personality, to whose level the author has been climbing, through similar types of men.

The Woodlanders (1887), though flanked by *The Return of the Native* and *Tess of the D'Urbervilles* (1891), suffers from comparison with neither, expresses the same intimate kinship of man with nature, and gives like instances of true nobility engaged in the lowliest occupations. Of the *Wessex Tales* (1888), gathered from different magazines, the strongest is "The Three Strangers" (*Longman's*, March, 1883), which was dramatized under the title *The Three Wayfarers* and produced at Terry's Theatre in London (1893), 11 years after Comyns Carr's version of *Far from the Madding Crowd* had been seen in Liverpool and in the Globe Theatre, London. Another collection of

short stories entitled *A Group of Noble Dames* (1891) preceded the publication of *Tess of the D'Urbervilles: A Pure Woman Faithfully Presented* (1891), through which Hardy became most widely known. Whatever may be said for or against the purity of the woman, there cannot be two opinions regarding the vividness of the presentation, although the art of *Tess* is marred at times by philosophic digressions that do not match the remainder of the literary fabric. Yet it is doubtful if any one of Hardy's stories holds the reader's interest more closely or makes a stronger appeal to his sympathies than does this tragedy of *Tess*. Nor is there anywhere in Hardy's writing more convincing insistence upon a logical connection and a consequent force of uncontrollable circumstance, or more relentless reiteration of the idea that man may be forced to reap where he has not sown. Whether here, and elsewhere when he writes in this vein, Hardy reveals himself a fatalist or a rigid moralist, is a question which will be answered largely in accordance with the temperament of the reader. A dramatization of *Tess*, made by Lorrimer Stoddard (1897) and taking no more than the usual liberties with the original plot, gave Mrs. Minnie Maddern Fiske (q.v.) the means for bringing out the subtle characterization of the heroine.

Whatever else may be said of *Jude the Obscure* (1895), it seems quite apparent that here Hardy gives the fullest expression to his genius for minute and merciless character analysis. There is even a feeling, at times, that the psychology is in danger of being refined into nothingness. The story of Jude's early discouragements in his efforts to get a university education is said to be autobiographical to a certain extent. The whole is a harrowing, and yet in the main convincing, study of the degradation of a character cursed from the outset with certain of the most dangerous moral weaknesses, which are steadily cultivated by cunningly conceived circumstances and plausibly arranged episodes. It can scarcely be denied that both of these books are literary masterpieces in their genre; and consideration of the remarkable fertility and resourcefulness of expression which each displays, makes the more inexplicable their author's occasional descent to the employment of indelicate metaphor and frankly indecent "realism."

Life's Little Ironies (1894) are short stories evidencing Hardy's grim sense of humor no less than his appreciation of values. He knows and shows how few among the coveted prizes of life are worth the struggle. *The Well-Beloved*, which was serially published in 1892, and in book form, with some revision, five years later, is of less importance. The reciprocal feeling of his native county found expression in his appointment as one of its magistrates (1894). Some of Hardy's earliest efforts were in verse, and the stray poetical productions of 30 years were collected in two volumes, *Wessex Poems* (1898) and *Poems of the Past and Present* (1901). They bear his mark in the saturnine flavor of some, the sympathy with the country and country folk of others, the patriotic English sentiment of all; but the instrument is not his own. He wrote *The Dynasts* (in three parts, 1904-08), a poetical drama. A complete edition of his works was published in 1905. In 1909 appeared *Time's Laughingstocks and other Verses*, and in 1913, after a long interval in his

fiction writing, *A Changed Man, and Other Tales. The Works of Thomas Hardy in Prose and Verse, with Prefaces and Notes* (20 vols.) was published in 1912-13. In 1910 Hardy was given the Order of Merit. Consult: W. Sherren, *The Wessex of Romance* (New York, 1902); Windle, *The Wessex of Thomas Hardy* (ib., 1901); Macdonell, *Thomas Hardy* (London, 1894); Lionel Johnson, *The Art of Thomas Hardy* (ib., 1894); Harper, *The Hardy Country* (New York, 1904); Wessex, painted by Walter Tyndale and described by Clive Holland (ib., 1906); F. O. Saxelby, *The Thomas Hardy Dictionary* (ib., 1911); L. Abercrombie, *Thomas Hardy: A Critical Study* (ib., 1913); H. Lea, *Thomas Hardy's Wessex* (ib., 1913).

HARDY, SIR THOMAS DUFFUS (1804-78). An English archivist, born at Port Royal, Jamaica. He succeeded Petrie as editor of the *Monumenta Historica*, published in 1848. As deputy keeper of the new Record Office, he did much to make all records accessible to the public, and brought to London the muniments of the three palatinates. He edited many documents for the Rolls Series. Representative of his work are: *A Descriptive Catalogue of MSS. Relating to the History of Great Britain and Ireland* (1862-71); *Registrum Palatinum Dunelmense* (1873-78); *Catalogue of the Lords Chancellors, etc.* (1843).

HARDYNG, JOHN (1378?-1465). An English chronicler. He was page to Sir Henry Percy, whom Shakespeare has immortalized as "Harry Hotspur," and went to the wars with his master. His rhyming chronicle, a curious but entirely unreliable document, evidences the ranges of his historical reading and his adaptability in treating current events in a manner pleasing to his patrons. Ellis's modern edition of this *Chronicle of England unto the Reign of King Edward V* was published in 1812. Grafton printed versions of it in 1543.

HARE (AS. *hara*, Icel. *hári*, OHG. *hase*, Ger. *Hase*, hare; connected with OPruss. *hasnis*, OIr. *ceinach*, Skt. *śvaśura*, for **śvaśura*, hare). One of a genus of rodent quadrupeds, of which there are many species very similar to each other. The Linnean genus *Lepus* now forms the family Leporidae, of which a peculiar characteristic is the presence of two small incisors immediately behind the ordinary rodent incisors of the upper jaw, so that these teeth seem to be double. This peculiarity is also found in the pikas (q.v.). The molar teeth, six on each side above and five below, are transversely grooved, and are formed of two vertical plates soldered together. All the animals of this family feed exclusively on vegetable food and chiefly on herbage, although they are also fond of grain, roots, and the bark of trees. Their forefeet have five toes, their hind feet four; the soles are hairy. Their fur is soft; the colors mostly gray or brown. The Alpine and Arctic species become white in winter; and all, except one Indian species, have white upon the undersurface of the tail. As this is invariably upturned in flight, it is regarded by naturalists as a recognition mark by which the young or companions may keep in view and follow their flying leader. From this characteristic arises the name "cottontail," popularly given to one of the smaller American hares. The black markings which become so conspicuous upon the ears of several species when they are lifted serve a similar purpose, and all disappear when the animal squats, and it then pre-

1. COMMON EUROPEAN RABBIT (*Oryctolagus cuniculus*).

2. LOP-EARED RABBIT (domestic variety).

3. VARYING HARE (*Lepus americanus*).

4. BLACK-EARED JACK-RABBIT (*Lepus melanotis*).

5. COTTON-TAIL (*Lepus sylvaticus*).

6. ROCKY MOUNTAIN PIKA (*Ochotona princeps*).

sents to the eye of the searcher only a neutral-tinted back. Hares thus offer good illustrations of "protective coloration" and "recognition marks" (qq.v). The rabbit also belongs to this family, but it is so different in many ways that it is described by itself. It may be said, in passing, that although the term "rabbit" is used generally for all kinds of leporine animals in North America, where the true rabbit does not exist, it belongs exclusively to the burrowing *Lepus cuniculus* of Europe; and all others of the family, including all the American species, should be called hares. About 30 species of *Lepus* are known, of which one is found in South America and some 20 in North America.

Hares of the Old World. The type of the family is the common hare (*Lepus europaeus*), which is found all over Europe, except in Ireland, Scandinavia, and the north of Russia. Its length is from 20 to 22 inches, and its usual weight seven or eight pounds. Another familiar Old World species is the mountain, or Alpine, hare (*Lepus timidus*). This occurs in Ireland, all over northern Europe and Asia, and in the Pyrenees, Alps, Caucasus, and thence east to Japan; while the polar hare of America is regarded by some naturalists as identical with it. It is considerably smaller than the common hare and has a rounder head, with shorter ears, hind legs, and tail, and a lighter-colored coat, which, at least in the colder parts of its range, turns white in winter. In Central Asia are found several other species, some of which are confined to the higher slopes of the great mountain ranges. A remarkable species is the Indian, or hispid, hare (*Lepus hispidus*), of the foothills of the eastern Himalayas. This hare has coarse, bristly ears, which are shorter than the skull, small eyes, a tail which is dark below and above, and hind legs only a little longer than the front ones. It is not a gregarious animal, but it is said to burrow as a rabbit does, and its young, therefore, are probably born naked and blind. It is reported that its flesh is white. Sumatra has an allied species. In Africa several species of hares inhabit the more open parts of the continent from the Sahara to the Cape. The habits of all these (except the hispid) are much alike.

The members of this family live among rocks and bushes, or in open country among the grass and brush. Each has a "form" in the grass or sheltered by a rock, and sometimes returns to this form every day for much of the year. Hares feed at night, are mainly nocturnal in their movements, and do not return to their forms until sunrise. Because of the greater proportionate length of their hind legs, they run up hill more easily than down, and they develop great speed. All the members of the genus are remarkable for their extreme timidity, yet they are often bold and courageous in defense of their young, and pugnacious towards others of their own race. Their angry stamping upon the ground with the hind feet is well known to all countrymen. With these hind feet they can deliver powerful blows, and this is their method in fighting. The hare never becomes fat, but its flesh is excellent food. Though shot and trapped, the ordinary method of hunting it, as a sport, is by coursing with greyhounds—a sport of classic antiquity. (See COURSING.) It is a prolific animal, although not nearly so much so as the rabbit. The female produces from two to five at a birth, and may begin to breed at six months of age and produce two or three broods

a year. The young (*leverets*) are born covered with hair and with the eyes open. When, as in the case of the hares of California, their natural enemies—beasts and birds of prey and serpents—are greatly reduced, this multiplication goes on with little to check it, while, if the food supply is yearly added to by enlarging plantations, the increase may be so rapid that the animals become a serious menace to agriculture, and special efforts must be made to keep them down.

American Hares. The Canadian polar hare is a variety (*arcticus*) of the European northern hare and turns from its brownish grizzle in summer to pure white in winter. It comes little south of the Arctic circle, except on the east coast, where it is to be found in Labrador and Newfoundland. Other American hares turn white in winter, however. The most conspicuous of these is the "varying" hare (*Lepus americanus*), which is distributed from the middle parts of the United States throughout the northern parts of the continent wherever forests grow. It shows a great variety of reddish and brownish tints, always with the tips of the ears black behind, and in winter among northern specimens only these black ear tips relieve the snowy white of the pelage; but southern specimens often make only a partial change of coat. On the Western plain and in California are found several species of large hares of gaunt form and immense ears, naturally called "jack rabbits" ("liebres" by the Mexicans). A dozen species or subspecies are recognized. (Consult E. T. Seton, *Life-Histories of Northern Animals*, New York, 1909.) The white-tailed or prairie hare (*Lepus campestris*) is found all over the plains north of Kansas and throughout the Utah Basin. It is the only jack rabbit whose coat turns white in winter, and it may be recognized in summer by the fact that its tail is entirely white. The tails of the other jack rabbits are more or less black on the top—a fact easily seen, as none of this group of hares turns up its tail as do the wood hares. Among the Western black-tailed rabbits are: (1) a bull-bellied species found in California and southwestern Oregon (*Lepus californicus*); (2) a large, long-limbed species inhabiting southern Arizona and Sonora, known as Allen's hare (*Lepus alleni*); (3) a widely distributed white-bellied animal with long ears, occurring in the Great Basin and commonly known as the Texan jack rabbit (*Lepus texianus*); and (4) the tall black-eared jack of the Great Plains (*Lepus melanotis*). It is doubtful whether any real distinction exists between the two last named, and the jack rabbit of the Southern plains may be said to extend westwardly to the Pacific coast.

These hares of the plains do not burrow, nor seek the protection of holes or shelter of any kind, beyond that afforded by a thicket of brush which may shield them from the winter's wind or the equally dreaded rays of the midsummer sun. Some dwell in a region where the winter temperature may fall as low as 50° F. below zero; others where the noonday sun heats the air to 140° and makes the rocks unbearable to touch; some in rich valleys, others on the sourest of deserts; yet all thrive with that remarkable adaptability to varying conditions which must be reckoned with in any consideration of these animals as a pest. Their food consists of grass, herbage, and largely of bark. It is difficult to find any considerable extent of country which

does not supply enough of this fodder for a population of hares, and as they drink but little, they do not suffer from the lack of water even in an almost desert land, for the moisture in the ordinary desert herbage seems to be all they require. They have comparatively few enemies, against which they are guarded by their invisibility when crouched in their "forms"; by their sense of sight and smell; and by the remarkable acuteness of their hearing, for the augmentation of which the great ears have been developed. If danger comes too near, they can usually escape it by flight—a word that approaches literal accuracy as a description of the series of high bounds, each 15 to 20 feet in length, with which their great hind legs carry them over the ground.

They multiply rapidly, yet are not so fecund as is frequently alleged. Those in the arid Southwest seem to produce only one to three at a birth, but have several broods a year, between January and September; while the Northern species breed no more than twice, as a rule, with four to six young in a litter. Most births fall in April, May, and June. The period of gestation is about 30 days. The young are born fully furred, with their eyes open, and often with several teeth in sight. They attain their full size (but not weight) in about two months. It will be seen that at this rate of increase, under such favorable conditions as are brought about in the West by irrigation, agriculture, and the diminution of serpents and birds and beasts of prey, the danger from an overpopulation of hares is very great; and for many years this has been a serious pest. Large sums have been spent on "rabbit-proof" fences and on various devices for excluding the animals from fields and orchards; and still larger losses have occurred through the absence or failure of protection. The principal measure has been that of the periodical "drive." All the men and boys and many women and girls of a given district gather in a circle about a square mile or more of space and drive the hares into an inclosure, where they are slaughtered with clubs. These battues have been most numerous, systematic, and effective in southern California, though occasional wherever the necessity arises, and in the San Joaquin valley have so reduced the hares that they are no longer dangerous. Students of the problem have concluded, however, that "driving" is only a partial and a demoralizing remedy, and assert that the only true safety for crops and orchards lies in the rabbit-proof fence. A complete discussion of this matter, with its history, statistics, and teachings, together with much information as to the utilization of the American hares as food and for their skins, hair, etc., may be found in Palmer, *The Jack-Rabbits of the United States* (Department of Agriculture, Washington, 1896), and Beddard, *Mammalia* (London, 1902).

Wood Hares. Of the smaller hares, the wood hare, or cottontail (*Lepus sylvaticus*), is the "common rabbit" of the United States, where it is scattered from the Atlantic to the Pacific, but does not extend far north. It is about 18 inches long; gray, more or less varied with black above, and somewhat tinged with yellowish brown, white below; tail cottony white; ears two-thirds the length of the head. The little marsh hare (*Lepus palustris*), whose tail is not grayish nor cottony, and the water hare, or "swamp rabbit," are familiar Southern species, the latter large and yellowish brown, white below,

Seton, *Wild Animals I Have Known* (ib., 1898); H. A. Bryden, *Hare Hunting and Harriers* (London, 1903); M. W. Lyon, *Classification of the Hares and their Allies* (Washington, 1904); J. C. Tregarthen, *Story of a Hare* (London, 1912). See RABBIT; PIKA; and Plate of HARES AND PIKA.

HARE. In point of law, one of the wild animals called game which are specially protected by game laws. The close season for hares is regulated in the United States by State legislation. See GAME LAWS.

HARE, AUGUSTUS JOHN CUTHBERT (1834–1903). An English author, the nephew of Julius and Augustus Hare. He was born in Rome and educated at Harrow and at University College, Oxford. The results of his travels he has given in guidebooks of great value to the traveler. Among his works, which are not limited to the *vademecums* referred to above, are: *Walks in Rome* (1870); *Cities of Northern and Central Italy* (1875); *Walks in London* (1877); *Cities of Southern Italy and Sicily* (1882). His *Story of my Life* (6 vols., 1896–1900) is full of delightful reminiscences of many celebrated people, and his *Memorials of a Quiet Life* (1872–76) is a charming biographical account of certain of his relatives. To him we are also indebted for a life of Maria Edgeworth (1894).

HARE, AUGUSTUS WILLIAM (1702–1834). An English clergyman of the Established church, brother of Julius Charles Hare. He was born in Rome and was educated at Winchester and at New College, Oxford, where he attacked several ancient customs and became founder of the Attic Society. He had been adopted (1798) by the widow of Sir William Jones, his godfather, but broke with her because of his refusal to qualify for the valuable living of Hurstmonceaux, formerly held by his father and in the gift of the Jones family. He became a tutor at New College in 1818 and, after ordination in 1825, rector of Alton-Barnes, where he lived from 1829 until poor health drove him to Rome. He wrote *Sermons to a Country Congregation* (1837) and, with his brother, *Successes at Truth* (1827). Consult A. J. C. Hare, *Memorials of a Quiet Life* (London, 1872–76).

HARE, GEORGE EMLIN (1808–92). An American Protestant Episcopal clergyman, born in Philadelphia. He graduated at Union College in 1826, was rector of St. John's, Carlisle, Pa. (1830–34), of Trinity Church, Princeton, N. J. (1834–43), and of St. Matthew's, Philadelphia (1845–52). In 1844–45 he was professor of Latin and Greek at the University of Pennsylvania. He had had charge of the Episcopal Academy during a part of his pastorate at St. Matthew's and was made instructor in the diocesan training school and, after its development into the Philadelphia Divinity School, a professor of biblical learning, and then (1881) of New Testament literature in the latter institution. He wrote *Christ to Return* (1840) and a volume of sermons, *Visions and Narratives of the Old Testament* (1889).

HARE, HORACE AMORY (1802–). An American physician, born in Philadelphia. He received the degree of M.D. in 1884 from the medical department of the University of Pennsylvania, where he was professor of children's

diseases in 1890, and in 1893 from Jefferson Medical College, where he became professor of therapeutics and diagnosis in 1891. He edited various medical journals—the *Therapeutic Gazette* after 1891. His medical essays won him many prizes from universities and medical societies. He is editor of *A System of Therapeutics* (4 vols., 1890-97; 14th ed., 1912) and *Medical Complications and Sequels of Typhoid and Other Fevers* (1901; 2d ed., 1909), and is author of *Essentials of Physiology* (1889; 4th ed., rev., 1897); *A Text-Book of Practical Therapeutics* (1890; 13th ed., 1909); *Practical Diagnosis* (1896; 6th ed., 1906); *A Text-Book of the Practice of Medicine* (1905); *Diagnosis in the Office and at the Bedside* (1914).

HARE, SIR JOHN (1844-1921). A well-known English actor and manager. He was born in London, was educated in Yorkshire, and made his first stage appearance at the Prince of Wales Theatre, Liverpool. Soon afterward (1865) he came to the London theatre of the same name, where he was very popular in the comedies of T. W. Robertson, with some of which in later years he toured in America. In 1875 he became manager of the Court Theatre, where he brought out *Olivia*, *A Scrap of Paper*, and other pieces. With Mr. Kendal at the St. James's Theatre (1879-88) he produced *Still Waters Run Deep* and *The Ironmaster*. In 1889 he assumed the management of the Garrick Theatre and afterward appeared with several of A. W. Pinero's plays, notably *The Profligate*, *The Notorious Mrs. Ebbesmith*, and *Lady Bountiful*. He took the Globe Theatre in 1897, producing *A Bachelor's Romance* there, and in 1899 Pinero's *The Gay Lord Quex*, which he brought to America in the season of 1900-01. He was knighted in 1907. Consult: Pemberton, *John Hare, Comedian* (London, 1895); Scott, *The Drama of Yesterday and To-day* (ib., 1899); William Winter, *The Wallet of Time* (2 vols., New York, 1913).

HARE, JOHN INNES CLARK (1817-1905). An American jurist, born in Philadelphia. He graduated at the University of Pennsylvania in 1834, was admitted to the bar in 1841, was associate judge of the Philadelphia district court (1851-67), then its presiding judge (1867-75), and from 1875 to 1895 was presiding judge of the Court of Common Pleas in the same city. In 1868 he received the degree of doctor of laws at the end of 10 years' service as a trustee of the University of Pennsylvania, in which he served for many years as professor of the institutes of law. His principle works are: *American Leading Cases*, with Horace B. Wallis (1847); *The Law of Contracts* (1887); *American Constitutional Law* (2 vols., 1889); *Smith's Leading Cases in Law* (1852); *White and Tudor's Leading Cases in Equity* (1852); *Hare on Contracts* (1887); *The New English Eschequer Reports*.

HARE, JULIUS CHARLES (1795-1855). Archdeacon of Lewes, a well-known English writer. He was born at Valdagno, 50 miles northwest of Venice, Italy, Sept. 13, 1795. While still a boy, he passed a winter at Weimar (1804-05), where he met Goethe and Schiller, and gained a permanent interest in German literature. On the death of his mother, in 1806, he was sent to the Charterhouse in London, where he remained until 1812, when he entered Trinity, Cambridge. There he became fellow in 1818, and after traveling abroad he began to read law in London

in 1819. In 1822 he was appointed assistant tutor at Trinity College, which position he retained for 10 years. He was ordained in 1826. In 1827 appeared the *Guesses at Truth by Two Brothers*, written by Hare and his eldest brother, Augustus William (q.v.). On the death of his uncle, in 1832, the rich family living of Hurstmonceaux, in Sussex, was refused by his brother Augustus and fell to him. After a journey to the Continent, where he met Bunsen at Rome, he came to his parish. With good intentions, he was not adaptable to the work of a country priest. In 1840 Hare was appointed Archdeacon of Lewes and in the same year preached a course of sermons at Cambridge. *The Victory of Faith* (3d ed., by Plumptre, 1874), followed in 1846 by a second, *The Mission of the Comforter* (3d ed., 1876). In 1853 he became a queen's chaplain. He was never successful as a preacher, but he was a scholar and a conscientious worker and did much to introduce England to German criticism and theology. He died at Hurstmonceaux, Jan. 23, 1855. For his biography, consult A. J. C. Hare, *Memorials of a Quiet Life* (London, 1872-76).

HARE, ROBERT (1781-1858). An American chemist, born in Philadelphia. As a boy he was employed in his father's brewery and had little spare time for study, but he managed to accumulate considerable knowledge of chemistry and physics and in 1801 invented the oxyhydrogen blowpipe. For this the American Academy of Arts and Sciences awarded him the Rumford medal. In 1818 he was professor of chemistry at William and Mary College, and until 1847 at the University of Pennsylvania. He made many ingenious and practical inventions of laboratory apparatus and wrote a number of papers on scientific subjects, in addition to which he published *Brief View of the Policy and Resources of the United States* (1810) and *Chemical Apparatus and Manipulations* (1836). His collection of chemical and physical apparatus is preserved by the Smithsonian Institution, of which he was an honorary member.

HARE, WILLIAM HOBART (1838-1909). An American bishop of the Protestant Episcopal church, son of George Emilen Hare. He was born at Princeton, N. J., and was educated at the University of Pennsylvania. He preached in Philadelphia until 1870, was for three years the general agent of the foreign committee of the board of missions, and in 1872 was elected Missionary Bishop of Niobrara. In 1883 his diocese was extended to include the State of South Dakota. He wrote several pamphlets on missionary work in the West. Consult M. A. D. Howe, *The Life and Labors of Bishop Hare, Apostle to the Sioux* (New York, 1911).

HARE KANGAROO. One of the small banded wallabies (q.v.) of the genus *Lagostrophus*, which resemble hares and have habits singularly like that animal's. They inhabit swampy districts on the west coast of Australia and make refuges for themselves by forming tunnels through the dense scrub, biting away twigs and branches until a clear passage and chamber are formed.

HAREL, a'rèl', PAUL (1854-). A French poet and innkeeper, born at Echaufour. He succeeded his grandfather as host of the inn *A la Oroia Saint-André*, early showed himself master of a simple and beautiful lyric style, was elected a member of the Academy of Caen, and in 1887 received a prize from the French

Academy. He published: *Sous les pommiers* (1879); *Gousses d'ail, et Fleurs de serpolet* (1881); *Les vingthuit jours du caporal Balandard* (1882), with Le Vavascur; *Rimes de broche et d'épée* (1883); *Aux champs* (1886); *La haunterie* (1880); the less successful play, *L'Herbager* (1891); *Voix de la glèbe* (1895); *Les dyspeptiques: fantaisie normande* (1908), which was well received.

HARE'LIP'. A deformity of the lip, frequently involving also the roof of the mouth, consisting of a cleft through these structures, to one side of the median line or on each side of it. Median fissure occurs at times, but is very unusual. It exists at birth, and the lip should be repaired during early infancy by operation. The cleft palate should be left till a later date, but should be closed before the child begins to talk. The cleft in the palate may be closed by an obturator in adults. In the ordinary (single cleft) form the mouth of the babe resembles that of a cat or hare. The double-cleft palate is comparatively rare. See DEGENERACY.

HARE'LIP. See CUTLIPS.

HAREM (Ar. *harim*, that which is sacred, set apart, forbidden). The name given in Mohammedan countries to the apartment in a dwelling set aside for the female members of the household. The Koran enjoins that women shall be discreet in their association with the other sex and forbids them to expose face or person except to a husband, father, son, or certain intimate male relatives (Sura xxiv. 31; xxxiii. 53-55). But such injunctions are not peculiar to Islam, and the extraordinary precautions observed by Mohammedans with respect to their women represent a deeply rooted Oriental idea much older than the rise of Islam. The setting aside of a special apartment for women in a house is but one of these precautions and undoubtedly antedates the time of Mohammed. The excavations conducted at Susa by Dieulafoy and De Morgan indicate that the palaces of the Persian kings contained a separate wing for the women—a view which is in accord with certain allusions in the Book of Esther (v. 12; vii. 1). In other books of the Old Testament there are also references to a special woman's apartment, and, from the fact that in Babylonian *kharimtu* is one of the names for woman, we may conclude that already in ancient Babylonia the women were kept in a greater or lesser degree of seclusion. It is, however, due to the influence of Islam that the harem as an institution has been so rigidly maintained in the East. It is at the risk of life that a nonbeliever or a male Mohammedan who does not fall within the prescribed category of husband, father, son, or other intimate relative enters the harem of a Mohammedan householder, to which there is always a separate entrance. While within the household the social intercourse between husband and wife is quite free, the wife or the wives of a man, attended by servants, mostly females, lead to a large extent isolated lives. The women visit one another and spend most of their time in each other's apartments. Restrictions of various kinds are imposed on them when they leave these apartments. They are to be veiled when appearing in the street, are accompanied by a male servant, and it is equivalent to loss of caste for a woman to be seen in company with a man unless veiled and in the presence of her husband. The harem as an insti-

tution is not necessarily connected with polygamy, for although a Mohammedan has by the law of the Koran the right to take four wives, there are comparatively few householders who avail themselves of this rather costly privilege. One wife or a wife and a concubine form the rule, and it is mostly in the case of persons occupying a high official position that several wives are gathered together under one roof. By an unwritten law the Sultan has the right to seven wives and an indefinite number of concubines, but it should be added that the tales of an extensive harem maintained by the rulers of Turkey are largely exaggerated and rest upon a confusion between actual wives (or concubines) and female attendants and slaves, of which there are of course large numbers in a royal household. The harem customs and the treatment accorded the women vary considerably in the various Mohammedan countries—Egypt, Syria, Arabia, Persia, Turkey, and India. In general more liberties appear to be allowed the women of the harem in Turkey and India than elsewhere; but it must be remembered that, even where the women are under the strictest surveillance, longstanding custom has deprived the technical imprisonment of any sense of degradation; and from the Mohammedan point of view it is not for the purpose of humiliating women that the harem as an institution has been introduced. Care is exercised to preserve the position of the "chief" wife, who takes rank above the others. In case a man has several wives, the latter may exact of their husband that each be provided with a separate apartment, consisting of at least a bedchamber and a kitchen. Within the harem, however, the woman reigns supreme; there she entertains her female friends, and there, surrounded by attendants to look after her wants, she spends her days with her children. The most objectionable features of the harem from the sociological and moral point of view are the idleness and vacuity of the life there, and the time-honored employment in large and particularly in royal households of eunuchs as supervisors of the harem and as attendants. Most of the tales of cruelty, immorality, intrigue, and crime to be found in works descriptive of harem life in the past may be traced to these features. Consult: Lane, *Manners and Customs of the Modern Egyptians* (London, 1837); Emmeline Lott, *Harem Life in Egypt and Constantinople* (ib., 1869); Harvey, *Turkish Harems and Circassian Homes* (ib., 1871); Jessup, *Women of the Arabs* (New York, 1873); Ramsay, *Everyday Life in Turkey* (London, 1897); Pierre Loti, *Les désenchantées* (Paris, 1906); Van Sommer and Zwener, *Our Moslem Sisters* (New York, 1907); id., *Daylight in the Harem* (Chicago, 1911); D. V. Brown, *Harem-lik: Some Pages from the Life of Turkish Women* (Boston, 1909). Lady Mary Wortley Montagu's letters may be consulted for descriptions of harem life in the Sultan's household in the eighteenth century, but the picture is only in a measure applicable to present conditions.

HAREN, hā'ren, WILLEM VAN (1710-68). A Dutch poet, born at Leeuwarden. He studied there, at Franeker under Hemsterhuys and Heineccius, and at Groningen in the home of Jean Barheyrac. In 1728 he succeeded to the castle of Henkenshage, at St. Anna Parish, after the death of his grandfather. The castle was burned four years later, with many valuable papers. It was rebuilt in 1734; but the fire

seemed the beginning of misfortune for him, and in 1768 he committed suicide, discouraged by financial losses. He wrote: *Leonidas* (1742), an ode, urging Holland to join in the War of the Austrian Succession; *Liergansen* (1742), which, with *Leonidas*, was republished in 1824; and an epos, *Friso* (1742 and 1758). His brother, ONNO ZWIER (1713-79), was a patriot and poet too. He wrote the epic *De Geuzen* (1772) and several dramas, of which *Ajon* (1769) is the best. The collected works of the two brothers were published by De Vries in 1824. Consult Van Vloten, *Leven en Werken van Willem en Onno Zwier van Haren* (Deventer, 1872-74).

HARE'S-EAR MUSTARD. See ERYSIMUM.

HARFLEUR, är'fler' (called in the Middle Ages *Harcflot*). A town in the Department of Seine-Inférieure, France, near the mouth of the Lézarde, about 4 miles east of Havre (Map: France, N., F 3). When the river became choked up, the Lancarville Canal was opened in 1887; it has a depth of 18 feet. The chief building is the beautiful Gothic church of St. Martin, with an elegant tower supposed to have been constructed by Henry V of England. Pop., 1901, 2086; 1911, 3320. In former times, before the rise of Havre, Harfleur was a flourishing town and the key to the entrance of the Seine. It was taken by the English under Henry V in 1415, retaken by the French in 1423, again seized by the English in 1440, and 10 years later recaptured by Charles VII of France.

HARFORD, JOHN SCANDRETT (1785-1866). An English biographer, born in Bristol, of Quaker parents. He was educated at Cambridge, but received an honorary degree from Oxford in 1822. He gave financial aid in the restoration of the Llandaff and St. David's cathedrals, while he and his brother gave the ground for the erection of St. David's College, Lampeter, Wales. The friend of Wilberforce and Hannah More, who immortalized him as *Caleb* in *Search of a Wife*, Harford was a philanthropist, but an anti-Socialist, less of a hero than a hero worshiper, and wrote such excellent biographies as *R. V. Pryor* (1808); *T. Paine* (1820); *T. Burgess, Bishop of Salisbury* (1840); and *Recollections of W. Wilberforce* (1864). Perhaps his most important work is contained in the *Memoirs of Michael Angelo, Savonarola, Raphael, and Victoria Colonna* (2 vols., 1857).

HARGOOD, SIR WILLIAM (1762-1830). An English admiral. His first voyage began when he was 13 years old, at which time he went to Newfoundland on the *Romney*. After service on other vessels, including the *Hebe*, on board which he had Prince William Henry, afterward William IV, for a shipmate, Hargood was made commander of the *Swallow* in 1789. Three years later he was captain of a frigate taken by the French and was court-martialed for surrendering too easily, but was honorably acquitted. His next experience was with mutineers on the *Leopard* in 1797, and the following five years he spent in Chinese and East Indian waters. In 1804-05 he was acting under Lord Nelson and was present at Trafalgar, when his ship, the *Belleisle*, and her crew suffered severely, as she was one of the first in action. Hargood's further services in North America, the West Indies, the Mediterranean, the Adriatic, and elsewhere were rewarded by his appointment to the command of the Channel squadron, with

the rank of admiral (1831), and subsequently to the chief command at Plymouth (1833-36). Consult Joseph Allen, *Memoir of the Life and Services of Admiral Sir William Hargood* (Greenwich, 1841).

HARGRAVES, här'grävz, EDMUND HAMMOND (1815-91). The discoverer of the gold fields of Australia, born at Gosport, England. He was engaged in sheep farming at Sydney, Australia, from 1834 to 1849 and spent the years 1849-50 in California. From the similarity in geological structure of the California gold-bearing districts to the west side of the Blue Mountains, in New South Wales, he concluded that there might be gold deposits in the latter place also. Accordingly he returned to Australia in 1851, was instrumental in the discovery of the Australian gold fields in February of that year, and made an announcement regarding them to the Colonial Secretary at Sydney. He acted for a time as a commissioner for gold fields and was voted at different times, by the New South Wales and Victorian governments, £15,000, and in 1877 the former state granted him a pension of £250 a year. He published *Australia and its Gold Fields: A Historical Sketch of the Progress of the Australian Colonies . . . with a Particular Account of the Recent Gold Discoveries* (1855).

HARGREAVES, här'grävz, JAMES (?-1778). Inventor of the carding machine and the spinning jenny. He was an artisan at Stanhill in Lancashire, where probably he was born. Hargreaves was an illiterate man and supported himself and family by weaving and spinning, which, according to the custom of the time, he carried on in his own house. In 1760 he invented the carding machine as a substitute for the use of hand cards, and four years later he produced the spinning jenny. Hargreaves had frequently tried to spin with two or three spindles at once, holding the several threads between the fingers of his left hand; but the horizontal position of the spindles frustrated his attempt. One of his children, however, is said to have upset the spinning wheel while he was at work, and, as he retained the thread in his hand, the wheel continued revolving horizontally and the spindle vertically. The observation of these motions produced the thought that, if a number of these spindles were placed upright and side by side, many threads could be spun at once. Hargreaves now put his idea into practice and constructed the jenny, at which he and his family worked. A few of these machines were sold and served to increase eight times the work of the spinner. This success led his fellow spinners, who were imbued with strong prejudices against machinery, to break into his house and destroy his frame. He then removed to Nottingham in 1768, where he erected a spinning mill. Two years later he took out a patent for his machine, and, discovering that it was in use by manufacturers in Lancashire without his permission, brought an action for £7000 damages. Pending the trial, he was offered by a company £3000 for the use of the jenny, but refused; and it having been proved that he sold some of his machines before the patent was obtained, it was thereby declared to have been invalidated, and his claim for compensation fell to the ground. Hargreaves continued to carry on business as a yarn manufacturer, with moderate success, till his death in April, 1778.

HARGROVE, ROBERT KENNON (1820-1905).

An American bishop of the Methodist Episcopal Church South. He was born in Pickens Co., Ala., graduated at the State University in 1862, and was professor of mathematics there from 1863 to 1867. Much of his life was spent in the pastorate. From 1865 to 1867, however, he was president of the Centenary Institute and from 1869 to 1873 president of Tennessee Female College, Franklin, Tenn. In 1882, though not a member of the General Conference, he was elected Bishop. In 1880 he was elected president of the board of trustees of Vanderbilt University.

HARICOT. See KIDNEY BEAN.

HARI-KARI, hū'rē-kū'rā. See HARA-KIRI.

HARING, hā'ring, WILHELM. A German novelist. See ALEXIS, WILLIBALD.

HARINGTON, SIR JOHN (1601-1612). An English author, born at Kelston, near Bath, in 1601. He was son of John Harington, author of the graceful *verses on Isabella Markham*. Queen Elizabeth was his godmother. Educated at Eton and at Christ's College, Cambridge, he studied law at Lincoln's Inn, but he soon became attached to the court. At the command of Elizabeth he translated Ariosto's *Orlando Furioso* (1591). For this easy and free rendering of an Italian classic Harington is best known. In 1596 he lost for a time the favor of the Queen by a series of tracts in the outspoken manner of Rabelais: *Metamorphosis of Ajax* (i.e., "a jakes"), *Ulysses upon Ajax*, *An Anatomy of Ajax*, and *An Apology*. He served in Ireland under Essex and was knighted on the field by the Earl, to the great annoyance of Elizabeth. After long striving for preferment under James I, he became at length one of the tutors of Prince Henry, for whom he wrote some shrewd sketches of the bishops of Elizabeth's reign, entitled *A Brief View of the Church of England* (first published 1653). He also composed many popular epigrams (complete ed., 1618). He died Nov. 20, 1612. Consult the memoir by C. Markham, prefixed to *Tract on the Succession*, Roxburghe Club (Edinburgh, 1880); *Nugæ Antiquæ*, miscellanies in verse and prose, ed. H. Harington (London, 1769; reëdited by Park, 1804); *Metamorphosis*, etc., edited by Singer (Chiswick, 1814).

HARIRI, hā'rē'rē, ABU MOHAMMED AL-KASIM IBN ALI (c.1054-1122). A celebrated Arabic philologist and poet. He was born at Basra (about 1054) and died there (1122). Little is known of his life and circumstances save that he was the son of a silk merchant (whence his name Hariri, from *harir*, silk). Hariri wrote several valuable grammatical works, of which two have been published: *Durrat al-gawās*, edited by Thorbecke (Leipzig, 1871), and *Mulhat al-irab*, edited and translated into French by Pinto (Paris, 1885-89). The most famous of all his writings, and one of the most remarkable compositions of all times and countries, is his book entitled *Makamat* (Sittings). It may be described as a novel, or a collection of 50 rhymed tales, loosely strung together, the centre of which is always a certain Abu Zaid from Scruf, who, witty, clever, amiable, of pleasing manners, well read in sacred and profane lore, but a thorough rogue, turns up under all possible disguises and in all possible places—sermonizing, poetizing, telling adventures and tales of all kinds—always amusing and always getting money out of his audience. It is witty, imaginative, dramatic, and displays a great command

of language. There have been many translations and imitations, of which by far the best is by Rückert, *Verhandlungen des Abu Seid von Scruf* (Frankfort, 1826); there are English translations by Chappellon (London, 1767), Preston (ib., 1850), and Chenery (ib., 1867). The text has been edited with notes by De Sacy (Paris, 1822; reëdited by Reinaud and Derenbourg, ib., 1847-53) and by Steingass (London, 1896). Consult Delatre, "Hariri, sa vie et ses écrits," in *Revue Orientale* (Paris, 1853).

HARISCHANDRA, hā'rish-chān'drā. A mythological Hindu king of the solar dynasty, a descendant of Ikshvaku, and one of the more prominent personages in the legendary history of ancient India. The earliest mention is made of him in the *Aitareya-Brāhmaṇa*, 7, 13-18 (see VEDA), where he is the subject of one of the most interesting legends of the Vedic period. He is represented here as desirous of obtaining a son and of making a compact with the god Varuna, by which he proposed to sacrifice to the god his son, if he were granted one. Varuna accepted his prayer, and a son, Rohita, is born to the King. The *Aitareya-Brāhmaṇa* then proceeds to relate how Hariśchandra delayed, from time to time, the fulfillment of his part of the compact, until at last the son himself finds his own substitute in Sunahśepa, the child of another, who sells his son for 100 cows, to be offered in sacrifice to Varuna. Ultimately, however, Sunahśepa was released from his bondage through the intervention of the gods. The story is important in connection with early accounts of human sacrifices. According to the epic poem *Mahābhārata*, Hariśchandra was a type of munificence and piety, and after death became elevated to the court of Indra; and some of the Purāṇas are still more explicit on his fate. Having given his whole country, his wife and son, and finally himself, to Viśvamitra, in satisfaction of the demands made by this priest, Hariśchandra, in consequence of this act, became elevated with his subjects to the paradise of Indra, but, having been misled by Narada to boast of his merits, was again precipitated. The repentance of his pride, however, arrested his downward descent, and he and his train paused in midair, where his city is popularly believed to be at times still visible. Consult Wilson's translation of the *Viṣṇu-Purāṇa* (5 vols., London, 1864-77). The *Mārkaṇḍeya-Purāṇa*, bks. vii-viii, translated by Wortham in the *Journal of the Royal Asiatic Society* (London, 1881) and by Pargiter (Calcutta, 1904), is the source of an interesting Sanskrit drama which deals with the text or trial of Hariśchandra. This play, entitled *Caṇḍa-Kauśika*, is accessible in the editions of Tarkalamkara (Calcutta, 1867) and Vidyasagara (ib., 1884) and in the translation by Fritze (Leipzig, 1892). Consult Macdonell, *History of Sanskrit Literature* (London, 1913).

HARIVANŚA, hā'rē-vān'shā. A Sanskrit epic composition of some 16,000 couplets, forming a supplementary book to the *Mahābhārata*, of which it professes to be a part. In many respects, however, it resembles a Purāṇa (q.v.). As its title, "Race of Hari, or Vishnu," implies, it is devoted largely to the life and adventures of Krishna as an incarnation of the god Vishnu. Its first part gives an account of creation, together with the legendary dynasties leading down to its main theme, the life of its hero, which forms the subject of the second

part; its third or last part treats of the future age and decadence of the world. Some allusions in Sanskrit literature which connect it with the *Mahābhārata* show that it must have been as old as the fifth century A.D., in fact as old as certain portions of the great epic itself, although these are generally regarded as later portions. As a rule, the *Harivansa* is not considered by scholars to be a work of great antiquity or value, although often quoted by later Sanskrit writers. There is a French translation by A. Langlois (Paris, 1834-35); and the best separate edition of the text was published in Bombay (1891). Consult Macdonell, *History of Sanskrit Literature* (London, 1913).

HARKAVY, hūr'kă-vī, ALBERT (ABRAHAM YAKOVLEVICH) (1839-). A Russian Orientalist and Hebrew rabbi, born at Novogrudok in Lithuania, and educated at Vilna and at the University of St. Petersburg. He studied in Berlin under Rüdiger and Dümichen and in Paris under Oppert, and would have been appointed docent in St. Petersburg save for a personal enemy. As librarian of the Imperial Public Library of St. Petersburg, which is especially rich in Semitic manuscripts, he wrote *Studien und Mittheilungen aus der Sankt Petersburger kaiserlichen Bibliothek* (incomplete, 1879-92) and published, in Hebrew, several works on the Jews in Russia (1865 and 1867); in French, *Les mots égyptiens de la Bible* (1870) and *Sur un passage des 'Prairies d'or' de Maqouli concernant l'histoire ancienne des Slaves* (1870); in German, besides the *Studien* already mentioned, contributions to Städe's *Zeitschrift für alttestamentliche Wissenschaft*, a *Katalog der hebräischen Bibelhandschriften der kaiserlichen öffentlichen Bibliothek* (with Strack, 1875), *Altjüdische Denkmäler in der Krim* (1876), *Aus dem archäologischen Congress* (1882), *Neugefundene hebräische Bibelhandschriften* (1884); and in Russian, works on Mohammedan writers concerning the Slavs and Russians (1870), on the original home of the Semites, Indo-Europeans, and Hamites (1872); and contributed to the Russian edition of Gustav Karpeles' *History of Jewish Literature* (1890). He edited vols. vi and x in the Russian edition of Graetz, *History of the Jews* (Leipzig, 1883-1902), and wrote notes and additions to Rabinovich's Hebrew translation of the same work, vols. iii-viii (Warsaw, 1893-99).

HARKNESS, ALBERT (1822-1907). An American classical scholar and educator, born at Mendon, Mass. He graduated at Brown University in 1842, was senior master of the Providence High School from 1846 to 1853, pursued studies in Germany at the universities of Berlin, Bonn, and Göttingen, and was the first American to obtain a degree from Bonn (Ph.D., 1854). In 1855 he was appointed professor of Greek in Brown University. He visited Europe in 1870 and 1883 and there investigated educational questions, in particular the methods of German and English universities. He assisted in founding the American Philological Association, of which he was a first vice president in 1869-70 and president in 1875-76. As a member of the Archaeological Institute of America, he was appointed in 1881 to the committee on the expediency of establishing an American School of Classical Studies at Athens, an institution which was opened in 1882. In 1884 he was elected director of the school. He lectured extensively before learned societies, con-

tributed valuable papers on original researches in philology to the *Transactions* of the American Philological Association, and from 1851 published a series of textbooks in Latin studies, of which it may be said that from them dated the beginning of a new era in the Latin department of classical education in America. The volumes include: *First Latin Book* (1851); *Second Latin Book and Reader* (1853); a *Latin Reader* (1865); *Introduction to Latin Composition* (1868, 1888); annotated editions of Cæsar's *De Bello Gallico* (1870, 1886), select orations of Cicero (1873, 1882), and Sallust's *Catiline* (1878, 1884); an annotated *Course in Latin Prose Authors* (1878); and a standard *Latin Grammar* (1864, 1881), published in a thorough revision with many additions as *A Complete Latin Grammar* (1898). Professor Harkness received the degree of LL.D. from Brown University in 1869.

HARKNESS, JAMES (1864-). A Canadian mathematician, born in Derby, England, and educated at Trinity College, Cambridge. Coming early to the United States, he was connected with Bryn Mawr College from 1888 to 1903, for the last seven years as professor of mathematics. In 1903 he was appointed Peter Redpath professor of pure mathematics in McGill University, Montreal. He was for a time a vice president of the American Mathematical Society and associate editor of its *Transactions*, was elected a member of the London Mathematical Society, and in 1908 became a fellow of the Royal Society of Canada. He published, with Professor Frank Morley, two treatises on the *Theory of Functions* and collaborated on the article "Elliptic Functions," in the *German Encyclopædia of Mathematics* (1914-15).

HARKNESS, ROBERT (1816-78). An English geologist, born at Ormskirk, Lancashire. He was educated at Dumfries and at Edinburgh University (1833-34). His paper on *The Climate of the Coal Epoch*, read before the Manchester Geological Society in 1843, and subsequent papers on fossils and geology of southwest Scotland, established his reputation as a geologist, and in 1853 he was appointed to the professorship of geology at Queen's College, Cork, Ireland. In 1854 he was elected fellow of the Royal Society of Edinburgh and in 1856 fellow of the Royal Society of London. He was the first to demonstrate the existence of the Lower and Upper Silurian deposits in southern Scotland, and he did important work in the geology of the English lake district. His scientific papers, some 60 in number, are still of considerable value.

HARKNESS, WILLIAM (1837-1903). An American astronomer, born at Ecclefechan, Scotland, a son of James Harkness (1803-78). He was educated at Lafayette College (1854-56), graduated from the University of Rochester in 1858, and studied medicine in New York City. He served as a surgeon in the Union armies during part of the Civil War. From 1862 to 1865 he was an aid in the United States Naval Observatory and then, after service on the monitor *Monadnock* (1865-66), was employed in the Hydrographic Office. During the eclipse of August, 1869, he discovered the coronal line *K 1474*. Three years later he was made a member of the Transit of Venus Commission, had charge of the party at Hobart, Tasmania, in 1879, and at Washington in 1882, when he became its executive officer. But his greatest

fame rests on his theory of the focal curve of achromatic telescopes and on his invention of the spherometer, caliper, and other astronomical instruments. He was astronomical director of the Naval Observatory (1894-99) and director of the *Nautical Almanac* (1897-99). He retired two days after attaining the relative rank of rear admiral (December, 1899). He was president in 1893 of the American Association for the Advancement of Science. Of his works, the most important is *The Solar Parallax and its Related Constants* (1891).

HARLAN. A city and the county seat of Shelby Co., Iowa, 43 miles by rail northeast of Council Bluffs, on the West Nishnabotna River, and on the Chicago Great Western, the Chicago, Rock Island, and Pacific and the Chicago and Northwestern railroads (Map: Iowa, B 3). It is the commercial centre for a farming region, has a large cannery, and manufactures gas and gasoline engines, foundry products, hand looms, agricultural implements, bricks, flour, etc. Harlan is the seat of the Western Iowa Vocational College. The city owns its water works, electric-light plants, and sewer system. Pop., 1900, 2422; 1910, 2570.

HARLAN, JAMES (1820-99). An American lawyer and legislator, born in Clark Co., Ill. He graduated at Indiana Asbury (now De Pauw) University in 1845, studied law, and, removing to Iowa, became Superintendent of Public Instruction in that State in 1847. In 1850 he was tendered the Whig nomination for Governor, but refused because he was under the required age. In 1853 he was chosen president of Iowa Wesleyan University, and two years later was elected to the United States Senate, but after he had served until January, 1857, his seat was declared vacant on a technicality. He was immediately reelected by the Iowa Legislature, however, and was again reelected on the expiration of his original term in 1861. He became very intimate with President Lincoln, his daughter Mary having married the President's son, Robert (q.v.). In 1865 President Lincoln appointed him Secretary of the Interior. After Lincoln's death he resigned to reënter the Senate and continued as one of the Republican leaders in that body until 1872, when he was defeated for reelection by William B. Allison. From 1882 to 1885 he was presiding judge of the Court of Commissioners of Alabama Claims at Washington.

HARLAN, JAMES S. (1861-). An American lawyer and commerce specialist, son of John Marshall Harlan. He was born at Evansville, Ind., graduated from Princeton University in 1883, and studied law in the office of Melville W. Fuller (q.v.) in 1884-88. Admitted to the bar in 1886, he practiced law in Chicago as a member of the firms of Gregory, Booth, and Harlan, and Harlan and Harlan. In 1901-03 he served as Attorney-General of Porto Rico. He became a member in 1906, and chairman in 1914, of the United States Interstate Commerce Commission.

HARLAN, JOHN MARSHALL (1833-1911). An American jurist, born in Boyle Co., Ky. He graduated at Centre College in 1850 and at the law department of Transylvania University in 1853, practiced his profession for a time at Frankfort, and became judge of Franklin County in 1858. From 1861 to 1863 he served in the Federal army as colonel of the Tenth Kentucky Infantry. In 1863 he was elected Attorney-Gen-

eral of Kentucky and resigned from the army to assume the duties of that position, which he held for four years. He was a Republican candidate for Congress in 1871 and 1875, but was each time defeated, and in 1877 was appointed by President Hayes a member of the Louisiana Commission, which was formed to inquire into and settle the civil controversies of the reconstruction period in that State and to aid in the establishment of a regular and stable government. In November, 1877, he was appointed an associate justice of the United States Supreme Court, a position which he filled with distinguished ability for 34 years. He was a judge of marked independence and intellectual vigor and a zealous upholder of popular rights. These qualities were consistently displayed in his decisions. In the Income Tax cases, in which the power of Congress to lay such a tax was ultimately denied, he was one of the four (originally five) justices who upheld the validity of the tax; in the Granger cases he voted with the majority which affirmed the power of a State legislature to regulate a railroad or other business affected with a public interest; and in the Trust cases, instituted by the government for the dissolution of the Standard Oil and American Tobacco companies, he supported the judgment of the court which pronounced those companies to be illegal combinations under the Sherman Act and decreed their dissolution; but he dissented vigorously from the view of the majority of his colleagues that the act in question was to be interpreted "in the light of reason," i.e., that it was for the court to say in a given case whether a combination in restraint of trade was illegal or not.

HARLAND, HENRY (1861-1905). An American novelist, born at St. Petersburg, Russia. Of New England ancestry, he was educated in New York City and at Harvard University, and, after traveling in Europe as a correspondent and serving for a time in the Surrogate's Office in New York City, removed to London, where, among other labors, he edited *The Yellow Book*. Notable among his books are: *As It Was Written* (1885); *Mrs. Peiwada* (1886); *The Land of Love* (1887); *The Yoke of the Thorah* (1887); *My Uncle Florimond* (1888); *Mr. Nonnenschheim's Inheritance* (1888); *A Latin Quarter Courtship* (1889). Later he produced *Mea Culpa* (1893), and won deserved success with *The Cardinal's Snuffbox* (1900), *The Lady Paramount* (1902), and *My Friend Prospero* (1904). His earlier novels, which dealt with American Jewish life, were written under the name "Sidney Luska."

HARLAND, MARION. The pseudonym of the American novelist Mary Virginia Hawes Terhune (q.v.).

HAR/LAW. A locality in Scotland, about 18 miles northwest of Aberdeen, noted as the scene of a battle fought July 24, 1411, between the Highlanders under Donald, Lord of the Isles, and the forces of the Lowlands under Alexander Stewart, Earl of Mar. The Highlanders were defeated with the loss of nearly 1000 men. The battle of Harlaw passed into legend as one of the most desperate attempts on the part of the Celtic tribes of Scotland to stem the tide of Anglo-Norman invasion.

HARLAY DE SANCY, de sã'n'sẽ', NICOLAS. See SANCY, NICOLAS HARLAY DE.

HARLEIAN (hãr-lẽ'an or hãr-lẽ-an) **COLLECTION.** A valuable collection of manuscripts in the British Museum (q.v.), consist-

ing of 7639 volumes and 14,236 original rolls, charters, deeds, and other legal documents. The collection, made by Robert Harley, first Earl of Oxford (1661-1724), and by his son, Edward Harley (1689-1741), was purchased by the English government from Lady Oxford in 1753 for £10,000 and deposited in the British Museum. The collection is indexed. Consult E. S. Roscoe, *Life and Times of Robert Harley, Earl of Oxford* (New York, 1902).

HARLEM. A town in the Netherlands. See HAARLEM.

HARLEM. A local name for that part of New York City above 106th Street between the East and Harlem rivers and Eighth Avenue. The original settlement, which had come into being as early as 1636, was on the site of the present Mount Morris Park, and in 1658 was named by Peter Stuyvesant New Haarlem (or Nieuw Haerlem), in memory of Haarlem, the Dutch town whence many of the settlers came. It was a quaint Dutch village, mainly of private residences surrounded by gardens and farms, and retained its character and its isolation until about 1830, when daily communication with New York was established. On about the site to-day of Barnard College of Columbia University was fought, on Sept. 16, 1776, the battle of Harlem Heights, in which the British troops were repulsed by the Americans. The old village of Harlem is quaintly described by Washington Irving in the *Knickerbocker's History of New York*. Consult: Pierce, *New Harlem, Past and Present* (New York, 1904); Riker, *History of Harlem* (new ed., ib., 1904); Johnston, *The Battle of Harlem Heights* (ib., 1897).

HARLEM RIVER. A tidal channel from 100 to 400 feet wide, separating Manhattan Island, New York City, from the mainland (Map: Greater New York, E 4). A short ship canal across the northern end of Manhattan Island, between the Hudson and the Harlem, was opened in 1895. The river has considerable commercial importance, though the channel is narrow and crooked. It is navigable only for steam vessels. The Harlem is spanned by a number of bridges, the finest being Washington Bridge and High Bridge, the latter an aqueduct bridge. A fine roadway, known as the Speedway, has been constructed along the western shore of the Harlem. On a lofty eminence on the opposite shore are the beautiful buildings of New York University.

HARLEQUIN, hār'le-kwīn (OF. *harlequin*, Fr. *arlequin*, It. *arlecchino*, from OF. *herlequin*, *herlekin*, *hellequin*, *hellekin*, demon, from the Germanic; cf. AS. *helle cynn*, folk of hell; scarcely from It. *il lechino*, plate liker, in allusion to the gluttony of the primitive Harlequin). One of the most noted of the conventional personages in pantomime (q.v.). The character developed in the early popular comedies of Italy (*commedia dell'arte*). Attempts to trace him back to the Roman *Atellana* and the mimic *Sannio*, through the Italian word *sanni*, are inconclusive. When the persons in the extempore comedy represented local types, Harlequin stood for Bergamo, just as did his brother *sanni*, Scapino, commonly for Naples, and Pantalone, the old man whom Arlecchino served, for Venice, while "the Doctor," Scapino's master, was supposed to be a pedant from Bologna. Harlequin is a suitor of Columbine and gets her away from poor Pedrolino (the French *Pierrot*).

Though full of amusing blunders, Harlequin combines his childlike capers with a good deal of mature *finesse*. He is represented with a tight suit of party-colored patches, a black mask, and a wooden sword. When he was introduced into France in the sixteenth century, the witty side of his character was more fully developed, and he was speedily adopted by other nations. Famous among the Harlequins of France in the seventeenth and eighteenth centuries were Domenico Biancolelli, called from Vienna to Paris by Mazarin about 1680; Vizenini, known as Thomassin and Bertinazzi, called Carlin, who won the admiration of Garrick. The first English Harlequin is said to have been Joe Haines in 1667. During the eighteenth century, when pantomime became so popular at Drury Lane in Rich's time, Harlequin's name was attached to numerous pieces, such as *Harlequin Dr. Faustus* (1723) and *Harlequin, a Sorcerer*, a little later. Two other noted English Harlequins were Joseph Grimaldi (q.v.) and Tom Ellar, who died in 1842. The modern Christmas pantomime preserves the elements of the legendary plot, the lovers Harlequin and Columbine being favored by fairy interference in despite of their persecutors, Clown and Pantaloon. The word "harlequin" has come to be commonly used, however, in a general sense almost synonymous with "clown."

Consult: Moeser, *Harlekin oder Vertheidigung des Grotesk-Komischen* (Leipzig, 1771; trans. by Warnecke, London, 1786); Reynaud, "Quelques mots sur Arlequin," etc., in *Etudes romanes dédiées à Gaston Paris* (Paris, 1891); Broadbent, *A History of Pantomime* (London, 1901); Driesen, *Der Ursprung des Harlekin* (Berlin, 1904).

HARLEQUIN CABBAGE BUG, or CALICO-BACK. A bug (*Murgantia histrionica*) noted as a very destructive enemy to cruciferous vegetables in the southern United States. It is an oval, somewhat flattened black bug with bright red and yellow markings, whence the names "harlequin" and "calico." It lives throughout the year on cabbage, radish, mustard, and other cruciferous plants, puncturing the leaves with its beak and causing them to wither and dry. The eggs, which resemble miniature white barrels with black hoops, are laid in a double row on the underside of the leaves. There are several generations in a year, and the adult bugs hibernate. It is the worst enemy of the Southern cabbage growers on account of the difficulty of destroying it. Mixtures made strong enough to kill the bugs kill the plants also. The best method is to plant an early trap strip of mustard, upon which the overwintering bugs will cluster in the spring, and upon which they may be killed with pure kerosene. This is originally a Central American insect and has been spreading towards the northeast for 40 years or more. It is now found in southern New Jersey and in most of the intervening territory southwest to the Rio Grande.

HARLEQUIN DUCK. A name given, in allusion to its variegated colors, to a rare duck (*Histrionicus histrionicus*) inhabiting the polar regions and occasionally seen in northern Europe and Canada. It is a near relative of the now extinct Labrador duck. Several other sorts of birds have been called harlequins because of their quaintly contrasted colors.

HARLEQUIN SNAKE (so called from the coloring). The small red and black venomous

coral snake (*Elaps fulvius*) of Florida, also called "candy-stick." See CORAL SNAKE.

HARLESS, här'les, GOTTLIEB CHRISTOPH ADOLF (1806-79). A German Protestant theologian, born in Nuremberg. He studied theology at Halle and Erlangen and became professor of theology at the latter institution in 1836. For his opposition in the Bavarian Diet of 1842 to the order requiring persons in the army to kneel at the passing of the sacramental host, he was removed from his professorship. In 1845, however, he was chosen to the consistory of Bayreuth, professor of theology at Leipzig, and court preacher. In 1852 he was made president of the Protestant consistory of Munich. Among his many important works are *Theologische Encyclopädie und Methodologie* (1837) and *Die christliche Ethik* (1842; Eng. trans., 1868). His autobiography, entitled *Bruchstücke aus dem Leben eines süddeutschen Theologen*, was published in 1872.

HARLETH, GWENDOLEN. The heroine of George Eliot's *Daniel Deronda*.

HARLEVILLE, J. F. COLLIN D'. See COLLIN D' HARLEVILLE.

HARLEY. The hero of Henry Mackenzie's *Man of Feeling*.

HARLEY, SIR EDWARD (1624-1700). An English Parliamentarian, born in Brampton-Bryan, Herefordshire. Educated at Shrewsbury, Gloucester, and Oxford, he studied law, but took up arms in the Parliamentary cause against the King in 1642, though disapproving of military supremacy in the nation. By 1646 he was a member of Parliament for his native county, but his opposition to Cromwell brought about his banishment from it for 10 years, though he was rewarded at the Restoration by Charles II, who made him Governor of Dunkirk (1660). Despite his changes of front (for he was against the Stuarts once more at the revolution of 1688), Harley was a conscientious upholder of the rights of the people, who showed their appreciation by sending him continuously to Parliament. Though a churchman himself, he fought against any form of persecution of the dissenters, was without party prejudice, and was remembered more for his practical benefactions than for such theoretical performances as *A Scriptural and Rational Account of the Christian Religion* (1695).

HARLEY, ROBERT, EARL OF OXFORD AND MORTIMER (1661-1724). An English statesman. Descended from an illustrious family of Herefordshire, he was born in Covent Garden, London, on Dec. 5, 1661. His father, Sir Edward Harley, had been a military officer, a member of Parliament, and an opponent of Cromwell during the Civil War. Robert, first elected to Parliament for the borough of Tregony in 1689, was at first a Whig, but gradually changed his politics till he became leader of the Tory and Church party. His cleverness, and tact, however, retained for him the support of many Whigs and Dissenters. He shortly acquired a great reputation for his knowledge of parliamentary law and practice, a study not much pursued in those days; and in the Parliament which met under the chieftainship of Rochester and Godolphin in February, 1701, he was elected Speaker by a large majority. Harley retained his post, having been twice reelected, till 1705. In 1704 he became a member of the Privy Council and Secretary of State. Assisted by his cousin, Abigail Hill—afterward Lady Masham

—he excited Queen Anne against her Whig ministers, Marlborough and Godolphin, who in turn plotted against him. By convicting Harley's secretary of treasonable correspondence with France, they caused Harley himself, though entirely exculpated, to resign his office in February, 1708. Harley, on his part, by persistently working on the Queen through Lady Masham during his two years of retirement, finally brought about the overthrow of the Whigs. In August, 1710, Godolphin was dismissed, and Harley, appointed to the post of Chancellor of the Exchequer, brought back the Tories. An event occurred in 1711 which raised him to the acme of popularity. A French priest and spy, who assumed the title of Marquis de Guiscard, when brought before the Council on March 8, on the charge of treasonable correspondence with the French, rushed upon Harley and stabbed him with a penknife. He fell dangerously ill from the wound; and when he recovered he was congratulated by Parliament on his escape, created Earl of Oxford and Mortimer, appointed Lord High Treasurer of Great Britain, and in the year following was decorated with the Garter. From this point Harley's course was downward; he was not a man of business and was destitute of decision of character. He was an astute political leader, but lacked sincerity, breadth of view, and, in brief, all other noble qualifications. The principal act of his administration was the Treaty of Utrecht. Harley ceased to pay court to Lady Masham, and Bolingbroke succeeded in getting him dismissed on July 27, 1714. Lord Oxford retired on Tuesday; Bolingbroke became Premier; and the Queen died on Sunday. George I was proclaimed, and the period of Tory ascendancy came to an abrupt end. The conduct of both the Tory leaders in their relations with the Stuarts had been such as to render their impeachment possible as well as probable. In March, 1715, Bolingbroke fled to France, but Oxford remained to meet his fate. He was sent to the Tower, and after two years' imprisonment brought to trial on a charge of treason. The two Houses quarreled about the mode of procedure, and as the Commons in anger refused to take any part in the trial, he was acquitted by the peers and released. He spent the remainder of his life in retirement. He was the founder of a collection of books and manuscripts, which perpetuates his name. See HARLEIAN COLLECTION.

Bibliography. Burnet, *History of my Own Time* (6 vols., London, 1838); Macaulay, *History of England* (ib., 1855); Stanhope, *History of England, Comprising the Reign of Queen Anne until the Peace of Utrecht* (ib., 1870); Lecky, *History of England in the Eighteenth Century* (ib., 1878-90); Manning, *Speakers of the House of Commons* (ib., 1851); Lodge, *Portraits of Illustrious Personages of Great Britain* (ib., 1850); Howell, *State Trials* (ib., 1809-26); Boyer, *Political State of Great Britain* (ib., 1724); Roscoe, *Robert Harley, Earl of Oxford, Prime Minister, 1710-14* (ib., 1902).

HARLEZ, är'lä', CHARLES DE (1832-99). A Belgian Orientalist who attained to special eminence in the fields of Iranian and Chinese philology. He was born at Liège, was educated at the university there, and afterward took clerical orders and rose to be a distinguished prelate in the Catholic church, with the title of monsignor. His interest in the Orient early attracted him to the study of Sanskrit and Aves-

tan, and in 1867 he became actively engaged in teaching these subjects at the University of Louvain. His translation of the Avesta, *Livre sacré des sectateurs de Zoroastre* (1875-77; 2d ed., 1881), still holds a high rank among scholars. It was followed by a series of other studies in Zoroastrianism: *Etudes avestiques* (1878); *Les origines du Zoroastrisme* (1879); *L'Épique des textes avestiques* (1883); and several grammars or manuals for the study of Sanskrit (1877; 2d ed., 1885); Avesta (1879; 2d ed., 1880); Pahlavi (1880), including one also on Manchu (1884).

About 1884, in connection with his researches into the language of Manchuria, he began to turn from Persia and India to China, and he devoted the remainder of his life to investigations connected with the literature, language, and life of China herself. A long series of monographs or volumes from his pen on the subject of Chinese was the result. These are to be found published in the *Annals of the Musée Guimet*, of Paris, and in the *Memoirs of the Royal Academy of Belgium*, of which he was a member. The *Essai d'anthropologie chinoise* (Brussels, 1896) and "Les figures symboliques du Yi-King," in *Journal Asiatique*, 1897, pp. 223-287, may be mentioned among his works in this field. In 1896 a large number of his pupils and friends issued a volume in honor of this distinguished scholar; it bears the title *Recueil de travaux d'érudition offert à Mgr. Charles de Harlez* (Leyden, 1896). The breadth of Harlez's studies and interest is shown likewise by his acquaintance with several of the American languages and also with Magyar literature.

HARLINGEN, här'ling-en (Frisian *Harns*). A seaport of the Netherlands, in the Province of Friesland, situated on the Zuyder Zee, 16 miles west of Leeuwarden, with which it is connected by rail and canal, about 65 miles north-northeast of Amsterdam (Map: Netherlands, D 1). The town is cut up by canals and is built on the site of a city which was swept away by an inundation in 1134. It has a school of navigation. Harlingen carries on an active trade with England and Norway, exporting the agricultural products of the Province of Friesland, and importing timber, hemp, jute, and raw cotton in considerable quantities. It is connected by steamship lines with Amsterdam, Hull, and London. The harbor is an excellent one, reconstructed in 1870-77 and protected by enormous dikes. The town possesses a statue of Caspar de Robles, the Spanish Governor who rebuilt the dikes after the inundation of 1566. Pop., 1900, 10,448; 1910, 10,574.

HARLOWE, CLARISSA. The heroine of Richardson's *History of Clarissa Harlowe*.

HARMACHIS, här-má-kis (Egyptian *Hormatakhi*, Horus in the two horizons). An Egyptian god, a manifestation of Horus (q.v.). According to certain inscriptions, the gigantic Sphinx (q.v.) near the pyramids of Gizeh, perhaps a work of Chephren (q.v.), represented this god; but he is usually represented in the form of a hawk.

HARMAINE AND HARMINE (from Neo-Lat. *harmala*, from Ar. *harmal*, Syrian rue). Two vegetable bases occurring in the husk of the seeds of the *Peganum harmala*, or Syrian rue, a plant that grows abundantly in the steppes of southern Russia. *Harmaline*, $C_{10}H_{11}N_2O$, when pure, crystallizes in colorless prisms which melt

at 238° C. (460.4° F.). *Harmine*, $C_{10}H_{11}N_2O$, crystallizes in delicate prisms which melt at about 258° C. (496.4° F.). The red coloring matter known in commerce as *harmala red* is obtained from the seeds of the same plant. The *Peganum harmala* belongs to the natural order Zygophyllaceæ. It is a half-shrubby plant, with smooth linear pinnate or bipinnate leaves and solitary white flowers. The seeds are used by the Turks as a spice.

HARMAN, A. See HERRMANN, A.

HARMAN, HENRY MARTYN (1822-97). An American educator and scholar, born in Anne Arundel Co., Md. He graduated from Dickinson College in 1848. For two years he was professor in the Baltimore Female College and for about 10 years with the Light Street Institute, Baltimore. In 1868 he was professor in West Virginia University; he traveled abroad for a year; in 1870 he became professor of ancient languages and literature in Dickinson College; and at the latter institution he held the chair of Hebrew and Greek from 1879 until his retirement, in 1895. He was a member of the Society of Biblical Literature and Exegesis. His writings include *A Journey to Egypt and the Holy Land* (1873) and *Introduction to the Study of the Holy Scriptures* (1884).

HARMAR, JOSIAH (1753-1813). An American soldier, born in Philadelphia, Pa., and educated at the Quaker School of Robert Proud. At the outbreak of the Revolutionary War he entered the patriot army as captain in a Pennsylvania regiment. He became its colonel in 1777, was promoted in 1783 to be brevet colonel in the first United States regiment, became brevet brigadier general in 1787, and on Sept. 29, 1789, was made commander in chief of the United States army. In order to punish the Indian tribes of the Northwest, who had been incited to hostilities by British agents, an expedition under the command of Harmar was sent out from Fort Washington, on the site of the present Cincinnati, in 1790. He inflicted considerable damage in desolating the country through which he passed; but in a battle with the Miamis, fought in September of that year, the main body of troops was left unsupported in consequence of an advance sortie of the cavalry and some militia, and after a severe defeat the expedition returned to Fort Washington. Harmar resigned his commission in 1792 and from 1793 till 1799 was adjutant general of Pennsylvania.

HARMATTAN (through the Arabic; probably from the native name). A very dry wind along the west coast of northern Africa from the Gulf of Guinea to Senegambia. This wind blows from the interior of northern Africa or the Desert of Sahara southward and westward, and is felt over the Atlantic Ocean to a considerable distance from the coast. It prevails especially during December, January, and February, with occasional occurrences in November and March. On the Gold Coast it blows from the northeast in the nighttime, but from the southeast at midday. During its prevalence the sky is cloudless and the regular diurnal variations of temperature are large; the morning minimum temperatures are lower and the midday maximum temperatures slightly higher; the relative humidity is from 25 to 50 per cent below the normal, and this dryness produces rapid evaporation and a profound sensation of coldness. The barometric pressure is slightly

higher during the first part of the Harmattan, and the wind, when once started, lasts for several days, or in extreme cases for several weeks. Vegetation is dried up very much as in the case of the dry winds of California and the plains on the eastern slope of the Rocky Mountains. The natives, being thinly clad, can prevent the skin from cracking and keep it soft and pliable only by anointing the body with oils or fats.

A peculiar whitish haze usually accompanies the Harmattan; this is due to the presence of an immense number of fragments of the microscopic shells of diatoms, together with other foreign matter floating in the air. As seen through this haze, the sun and moon have a reddish tint. This diatomaceous dust is undoubtedly brought by the wind from the interior, possibly from the desert itself. The Harmattan wind is usually cool and dry, but in a few localities it is warm and dry. Everything points to the fact that it is a descending wind blowing out from under the great area of moderately high pressure that prevails over the Sudan, and towards an area of moderately low pressure temporarily prevailing over the equatorial part of the Atlantic Ocean. This wind blowing from the Sudan northward towards Europe becomes the Sirocco of Italy. The same wind blowing over the desert itself and carrying great clouds of sand gives rise to the Simoon. The cool, dry, cloudless weather and hazy horizon that prevail occasionally in the eastern portion of the United States and especially in the dry months of California are analogous to the African Harmattan. See DUST, ATMOSPHERIC.

HARMENOPULOS, hār'mēn-ōp'ū-lōs. KONSTANTINOS (c.1320-c.1380). A Byzantine jurist, an Imperial counselor under Cantacuzenus and John Palaeologus and later a judge in Thessalonica. His *Hecabiblos* (ed. by Heimbach, 1851) had much use through the Middle Ages and is still an authority in modern Greece. Consult Dirksen, *Das Rechtsbuch des Harmenopulos* (Berlin, 1847).

HARMENSEN, JACOB. See ARMINIUS, JACOBUS.

HARMINE. See HARMALINE.

HARMODIUS AND ARISTOGITON (Lat., from Gk. Ἄρμόδιος, Ἀριστογείτων). Two Athenian citizens, of the family of the Gephyraei. Harmodius was a beautiful youth who ardently loved his relative Aristogiton. Hipparchus, son of the tyrant Pisistratus, endeavored to separate the two friends and to secure the friendship of Harmodius for himself, but, not succeeding, avenged himself by insulting publicly the sister of Harmodius. Thereupon Harmodius and Aristogiton laid a plot to slay both Hipparchus and his brother Hippias on the day of the great Panathenaic festival (514 B.C.). The plot miscarried because a premature attack was made. Hipparchus was slain, but Harmodius was at once killed by the guards. Aristogiton fled, but was afterward taken and executed; though put to the torture, he did not disclose the names of the real conspirators. Hippias was afterward expelled (510 B.C.) and then and in all later times Harmodius and Aristogiton were honored as martyrs who had fallen in the cause of liberty. Their praises were sung in drinking songs, and they received almost divine honors. Two bronze statues, made by Antenor (q.v.), an Athenian sculptor, were set up in their honor in the Agora; these were carried away by Xerxes at

the time of the Persian War, but were afterward brought back by Alexander the Great. Other statues by Critius and Nesioties, however, in 477 replaced those carried away by the Persian King. Of these a copy is believed by good scholars to be extant, in the Museo Nazionale at Naples. Consult Baedeker, *Southern Italy and Sicily* (16th Eng. ed., Leipzig, 1912). The descendants of Harmodius and Aristogiton enjoyed freedom from taxation and from all public duties. Consult: Harrison and Verrall, *Mythology and Monuments of Ancient Athens* (New York, 1890); Fraser, *Pausanias*, vol. ii (Cambridge, 1913); E. A. Gardner, *A Handbook of Greek Sculpture* (London, 1911); and the better histories of Greece.

HARMON, JOHN. The hero of Dickens's *Our Mutual Friend*.

HARMON, JUDSON (1846-1927). An American lawyer and public official. He was born at Newtown, Ohio, and graduated at Denison University in 1866 and at the Cincinnati Law School in 1869. He was originally a member of the Republican party, but left it in the Greeley-Grant campaign of 1872. He was elected mayor of Wyoming, Ohio, in 1875 and judge of the Superior Court of Cincinnati in 1878; but nine years later he returned to active practice, from which, in 1895, he was called to succeed Richard Olney as Attorney-General in President Cleveland's second cabinet. His "trust policy" was to make guilt personal and prosecute criminally. In 1897 he was elected president of the Ohio Bar Association, and in the same year he became professor of agency in the law department of the University of Cincinnati. He served as Governor of Ohio (1909-13) and was a prominent rival of Woodrow Wilson for the presidential nomination in the Baltimore convention of 1912.

HARMONIA (Lat., from Gk. Ἀρμονία). In the Theban legend, the daughter of Ares and Aphrodite, and wife of Cadmus (q.v.), who received her after slaying the dragon. The wedding was attended by all the gods and in the Theban cycle seems to have occupied as prominent a place as that of Peleus and Thetis in the tale of Troy. Among the wedding gifts were a mantle and a necklace, the work of Hephaestus, which played a large part in the later legend, as bringing ruin to their possessors; with the necklace Polynices bribed Eriphyle to betray her husband, Amphiarus (q.v.), to his death. (See ALCEON; PRIGNEUS.) When Cadmus was introduced into the Samothracian mysteries, Harmonia became the daughter of Zeus and Electra and sister of Dardanus and Iasion, and the marriage was celebrated at Samothrace (q.v.). Another version told how Cadmus carried off Harmonia, who was sought during the mysteries, as Kore at Eleusis. Harmonia seems originally to have been a goddess of love and the harmonizing power of nature. Different in origin is the Attic Harmonia, who joins in the chorus of Muses and Graces, as companion of Aphrodite, and even, in Euripides, becomes mother of the Muses. In this version of the story she is simply a personification of order and harmony; a Roman counterpart to her is CONCORDIA. Consult Gayley, *The Classic Myths in English Literature and in Art* (2d ed., Boston, 1911), and the article "Harmonia," in Pauly-Wissowa, *Real-Encyclopädie der klassischen Altertumswissenschaft*, vol. vii (Stuttgart, 1912).

HARMONICA (Neo-Lat. nom. sing. fem., from Lat. *harmonicus*, Gk. *ἀρμονικός*, *harmonikos*, harmonious, musical, from *ἀρμονία*, *harmonia*, harmony). A musical instrument, invented by Benjamin Franklin. The instrument consisted of a series of glasses, each one in the shape of a cup, or half globe, being put into a revolving motion on its centre by means of a treadle, while the moistened rim was touched by the finger. Franklin, in a letter dated July 13, 1762, to Padre Beccaria, at Turin, mentions the history of his invention. An Irishman named Pockrich was the first to hit on the idea of playing airs on a row of glasses, which he tuned by putting water into each. He performed publicly in London; but he and his glasses were burned in a conflagration in London in 1750. When Franklin finished his invention, he found an excellent performer in a Miss Davis, to whom he made a present of his harmonica. Miss Davis in 1765 performed on the harmonica in Paris, Vienna, and all the large cities of Germany with great effect. The compass of its notes was from *c* to *f* including all the chromatic semitones. Consult K. F. Pohl, *Zur Geschichte der Glasharmonika* (Vienna, 1862).

HARMONIC CURVE. A curve formed by the vibration of a musical string. The curve of sines (q.v.) is a simple harmonic curve. The name "harmonic" was used in this connection by the Greek geometers in investigating the theory of music.

HARMONIC DIVISION. In geometry, a line segment *AB* is said to be *harmonically*

divided when two points are taken, one in the segment and the other on the segment produced, as *C* and *D*, such that

$$AC : CB = AD : DB.$$

Four quantities, *a*, *b*, *c*, *d*, are said to be in *harmonic proportion* when their reciprocals $\frac{1}{a}$, $\frac{1}{b}$, $\frac{1}{c}$, $\frac{1}{d}$ are so related that $\frac{1}{b} - \frac{1}{a} = \frac{1}{d} - \frac{1}{c}$. The "harmonic mean" of two numbers, *a*, *b*, is $\frac{2ab}{a+b}$. It is the reciprocal of the arithmetic mean of the reciprocals of the two numbers.

HARMONICON (Neo-Lat., from Gk. *ἀρμονικόν*, *harmonikon*, neut. of *ἀρμονικός*, *harmonikos*, harmonious, musical), **CHEMICAL.** An apparatus consisting of an open glass tube, the air in which may be made to give a sound resembling a musical note when it is held over a jet of burning hydrogen. The sounds produced arise from the successive explosions formed by the periodic combinations of the oxygen in the air with the hydrogen. The note depends on the size of the flame and the length of the tube, and with a long tube, by varying the position of the jet in the tube, a series of notes may be produced. This phenomenon, which was discovered by Lampadius, has been investigated by Tyndall and described in his *Lectures on Sound*. Before the jet is lighted, in an actual experiment, the formation of hydrogen must be allowed to go on until the air is completely driven out of the generating bottle; otherwise a dangerous explosion may take place.

HARMONIC PROGRESSION. See **SERIES.**

HARMONIC PROPORTION. See **HARMONIC DIVISION.**

HARMONICS (from Lat. *harmonicus*, harmonious, musical). The accessory or concomitant tones produced by any fundamental tone. When a string tuned to *C*, e.g., is set in motion, it produces not only that one note, but a number of other tones less intense. These secondary tones are so much weaker than the fundamental that it requires even the closest attention of a fine ear to detect their presence. Mersenne, a Franciscan monk who died in Paris in 1648, was the first who discovered this. But it was not until 1701 that Sauveur gave a scientific explanation. Rameau availed himself of Sauveur's investigations and founded his new system of harmony upon that basis. When the string *C* vibrates, it swings not only in its entire length, but at the same time smaller oscillations are produced by the two halves, the three thirds, the four fourths, etc., of the string. Tones can be distinguished for every division of such a string up to one-sixteenth. The two halves vibrating produce each the octave; the three thirds each the fifth above the octave; the four fourths each the fourth above the fifth, etc., of the fundamental tone. This is illustrated by the following table (1 denoting the entire length of the string, 2 one-half, 3 one-third, etc.):

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
C,	c,	g,	c ¹ ,	e ¹ ,	g ¹ ,	b ¹ ♯,	c ² ,	d ² ,	e ² ,	f ² ♯,	g ² ,	a ² ,	b ² ,	b ² ♯,	c ³ .

The tones marked *x* are only approximately correct. The eleventh tone, e.g., is neither *f* natural nor *f* sharp, but one between these and nearer to the latter than the former. As all these tones lie above the fundamental, they are called *overtones*; because they are produced by vibrations of only a part of the string, they are also called *partial tones*, or *aliquot tones*. The name *harmonic tones* is given to them because all the tones that are given in their true pitch, except the ninth (*d*²), are elements of the fundamental triad (*C*, *E*, *G*). The intensity of the harmonic tones decreases in inverse ratio to their pitch. The lowest tone, *C*, is called the *generator*. It will easily be seen how from these overtones the consonance of the major triad is established, for each of the elements occurs more than once in the series. *F*², *Ab*, *Bb*, and *B* are not given in their true pitch, and *D* occurs only once in the whole series.

Taking a high tone, *c*³, e.g., a series of tones lying below, and bearing the same relation to the highest tone as the overtones to the fundamental, or generator, is produced. These tones are called *undertones*, or *lower partials*. The following table illustrates this (notes produced only with approximate correctness being again marked *x*):

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
c ³ ,	c ³ ,	f ³ ,	c ⁴ ,	a ⁴ ,	f ⁴ ,	d,	c,	B ^b ,	A ^b ,	G ^b ,	F,	E ^b ,	D,	D ^b ,	C.

In this series *D^b*, *D*, *E^b*, and *G^b* are not given in true pitch, and *B^b* occurs only once. *F*, *Ab*, *C*, occur each more than once. They are the elements of the *F* minor triad; hence the consonance of the minor triad is established by the series of *undertones* in the same manner as the consonance of the major triad is established by the series of *overtones*. From the consonance of these *chords* the consonance of *intervals* is also determined, for all intervals found in these chords or their inversions are regarded as consonant. The second inversion of either the major or minor triad—i.e., with the fifth as

the bass tone (see *INVERSION*)—yields the intervals of the fourth and major and minor sixth respectively. The only intervals not derivable from the above two series are the second and seventh, which are therefore regarded as dissonant, as well as any chord into the formation of which they enter. See *INTERVAL*.

What has been said about the vibrations of a string applies equally to the vibrations of a column of air. On any stringed instrument harmonics can be produced by lightly touching with the finger tip any nodal point of the string. (See *NODE*.) The string then cannot vibrate in its entire length, but only in sections, the length of which is determined by the length of that part of the string lying between the neck of the instrument and the nodal point touched by the finger. For instance, if the lowest string of the violoncello (C) is lightly touched at the middle point between the neck and the bridge, the two sections will vibrate independently, and each half will produce the octave above the tone to which the string is tuned. Thus, instead of C, its next higher octave, *c*, will be heard. Touching the string at one-third of the distance between the neck and the bridge, it will vibrate in three independent sections, each producing the twelfth (or fifth above the octave) of the fundamental note. All the partial tones given in the above table can thus be produced by touching a point at one-fourth, one-fifth, etc., the length of the string. Tones thus obtained from an open string are called *natural harmonics*. Harmonics can also be obtained by first stopping a string, i.e., pressing it firmly to the finger board, by one finger and touching it lightly with another finger at some nodal point between the pressed-down finger and the bridge. Tones produced in this manner are called *artificial harmonics*. Harmonics are distinguished from tones produced in the ordinary manner by a peculiarly sweet and ethereal quality. The opening bars of the prelude to *Lohengrin* are a splendid example of the effect produced by harmonics. In musical notation harmonic tones are indicated by a ° placed over the note or by open square notes °. On wind instruments (both brass and wood) harmonic tones are produced by varying the intensity and direction of the air current. The pressing down of a valve has the same effect as the pressing down of a finger on a stringed instrument. Consult Hauptmann, *The Nature of Harmonics and Metre* (2d ed., London, 1892), and H. Riemann, *Die Natur der Harmonik* (Leipzig, 1882). See *CLANG TINT*.

HARMONIC STOP. An organ stop, having pipes double the usual length and pierced midway, so that the tone produced is an octave higher than the ordinary pitch. See *ORGAN*.

HARMONIOUS BLACKSMITH, THE. An old tune to which Handel wrote variations, and the composition of which, after his death, was ascribed to him. The composer of the original is unknown.

HARMONISTS, or HARMONY SOCIETY. A communistic society, formed by John George Rapp (born in Iptingen, Württemberg, in 1770) and some 750 others, mostly from Württemberg. These people came to America for various reasons—many, George Rapp among them, because they were at variance with the Church and the government. Rapp taught that the Church had wandered far from its original estate; at the same time he insisted on laboring

on Sunday and refused to send his children to school. He, and those of like mind, were therefore prosecuted, and fined, and imprisoned. This led finally to a determination to seek more congenial quarters. In 1803 Rapp and two others, as a party of exploration, contracted for the purchase of a tract of 5000 acres in Butler Co., Pa., and to this place there followed 140 families. The exigency of their condition (they had but little money) forced him to put their money into one common fund. They therefore entered into articles of association on Feb. 15, 1805, the substance of which was "each for all and all for each in sickness and in health." Coincident with the signing of the articles, they proceeded to an election of officers. John George Rapp was elected head of the society. Frederick Reichert was elected to be the manager of its business, commerce, etc., and a board of elders was also elected, for the enforcement of the society's rules and regulations. They called their town Harmony and their society the Harmony Society. In 1807 celibacy was advocated by some, and, although Rapp did not entirely bar it, this gradually became a custom—there were few births in after years. Agreeably to Rapp's request, Frederick Reichert became Rapp's adopted son and took the former's name. Under Frederick Reichert's management the society prospered, but he soon wished for a location better suited to his commercial purposes. The community therefore moved in 1814 to Indiana, where it acquired 30,000 acres on the Wabash River. Here was built the town of New Harmony, and the settlement entered into agriculture and manufacture on a larger scale. Owing to the scarcity of currency, distance from the Eastern markets, and unfriendliness of the neighbors (being Abolitionists in sentiment, disagreeable elements from Kentucky, only 15 miles away, caused them much annoyance), Frederick Rapp (1824) purchased a tract of 3000 acres on the Ohio River, 18 miles below Pittsburgh. To this, their last home, they moved forthwith; selling in the meantime their Indiana property to Robert Owen. They named the last town Economy. Here, under the business acumen and efficient management of Frederick Rapp, they enjoyed such prosperity that by 1829 they dominated the trade and the markets of Pittsburgh and down the Ohio River. They were attacked as a monopoly, and it was advocated that the society be dissolved by the State. At this time the community was not neglectful of matters pertaining to art and culture. Frederick Rapp purchased and installed a museum, containing fine paintings and many curios and antiquities; they had a deer park, a floral park, and a maze, or labyrinth; they also had a good orchestra, were fond of music, and gave much attention to its cultivation. In 1832 the society suffered a serious division. Of 750 members, 250 became alienated through the influence of Bernhard Mueller (self-styled Count de Leon), who, with 40 followers (also at variance with the authorities in the old country), had come to Economy to affiliate with the society. Rapp and Leon could not agree; a separation and apportionment of the property were therefore agreed upon. This secession of one-third of the society, consisting mostly of the flower of young manhood and young womanhood, broke Frederick Rapp's heart. He died within two years. It resulted, also in the practical destruction of the community. The cotton, woolen, and silk

factories continued in operation for a time in a desultory way and gradually closed altogether. After Rapp's death, in 1834, the management passed successively into the hands of George Rapp, who died in 1847; R. L. Baker and Jacob Henrici, 1847-69; J. Henrici and Jonathan Lenz, 1868-92; J. S. Duss, 1892-1903; Susie C. Duss, 1903-06. The high-water mark of the society's prosperity was at the close of the administration of R. L. Baker in 1868; its wealth at that time being probably \$2,000,000. By 1890, however, it was hopelessly in debt, on the verge of bankruptcy, with a depleted membership of aged people. The society was overwhelmed with litigation on the part of would-be heirs. Disaster was averted by the efforts of J. S. Duss. He finally won the lawsuits and paid the society's indebtedness. The great strain which he had undergone undermining health, he was forced to resign his trusteeship in 1903. There being but few members left, the society was formally dissolved in 1906. Consult: Aaron Williams, *The Harmony Society at Economy, Pennsylvania, Founded by George Rapp, A.D. 1805* (Pittsburgh, 1876); Nordhoff, *Communitistic Societies of the United States* (New York, 1874); Alfred Hinds, *American Communities* (rev. ed., Chicago, 1902); Bole, *The Harmony Society* (Philadelphia, 1904); J. S. Duss, *George Rapp and his Associates* (Indianapolis, 1914).

HARMONIUM (Neo-Lat., from Gk. *ἀρμόνιος*, *harmonios*, harmonious). A reed organ with bellows which are operated by the feet of the performer. The tone is produced by free vibrating reeds. The harmonium is a development from the older regal (q.v.). In 1810 Grenié exhibited the first harmonium, which he called *orgue expressif*, because this instrument was capable of greater expression as well as of producing a crescendo and diminuendo. A. Debain, of Paris, improved it, and first gave it the name of harmonium when he patented his instrument in 1840. A complete revolution in the construction of the harmonium was begun in America when a mechanic who had worked in the factory of Alexandre in Paris emigrated to America. This man conceived the idea of a suction bellows, instead of the ordinary bellows which forced the air outward through the reeds. The firm of Mason and Hamlin, of Boston, in 1860 made their instruments with the suction bellows, and this method of construction soon superseded all others. Consult Mustel, *L'Orgue expressif ou l'harmonium* (Paris, 1903).

HARMONY (Lat. *harmonia*, Gk. *ἀρμονία*, *harmonia*). The science which treats of chords, their structure, relation, progression, and resolution. As such it forms to-day the fundamental branch of the science of musical composition. All tones are regarded as elements of some fundamental chord, and for this reason the voices lose much of their individual freedom which they have in counterpoint, but are regarded more as affecting the relations of successive chords. As taught to-day, harmony comprises the study of intervals, chords, their structure, inversions, and chromatic alterations; progression of the various voices; suspensions, anticipations, and passing notes; modulation. Harmony, in our acceptance of the term, was unknown to the ancients. Only in the tenth century did a Flemish monk, Hucbald, conceive the idea of setting a second voice a fifth below the original cantus. This crude experiment was the beginning of harmony. In the sixteenth

century Zarlino, in his great work *Istituzioni harmoniche*, established the consonance of the third and also discovered the polarity of major and minor. This means, he proved that the major scale is essentially an *ascending* scale with semisteps between 3-4 and 7-8; whereas the minor scale is essentially *descending* with the semisteps in the identical places. In other words, one is the exact counterpart of the other. Therefore, in major all intervals are determined *upward*, in minor *downward*. (See MINOR.) That this discovery did not bear fruit immediately is due to the invention of figured bass, which determines all intervals from the *bass* tone instead of the *fundamental*. Tartini, in the eighteenth century, tried to develop Zarlino's ideas, but failed because he could not get away from the theories of figured bass. Thus, the idea of the polarity of major and minor fell into oblivion until in 1853 Moritz Hauptmann (q.v.) established this relation on a firm scientific basis. But after the third was once recognized as a consonance, the basis for the construction of chords was given. Still, music could not free itself from the fetters of the Church modes (q.v.). Hence the development of music took place along the lines of polyphony (q.v.), or contrapuntal writing. Only after the establishment of the major and minor modes in place of the Church modes, and the subsequent introduction of equal temperament (q.v.), which rendered modulation into all keys possible, could music develop harmonically. Thus, Bach, while marking the highest development of the polyphonic contrapuntal style, at the same time marks the beginning of homophonic harmonic writing. Since then the progress of harmony has been very rapid. Progressions that startled one generation by their dissonance and boldness were accepted as pleasing and natural by the next, until, in the works of the great masters of the nineteenth century, we have a wealth and variety of harmonies that their predecessors never dreamed of. To-day all music is conceived as resting upon a *harmonic* basis. All tones are regarded on the basis of consonant chords, so that dissonant chords are conceived not as independent formations, but as modifications of a fundamental consonant chord. That this view is the only rational one and rests upon a natural basis is conclusively proved by the fact that the works of the greatest writers of the polyphonic style can all be reduced to a simple harmonic basis.

The importance of harmony in modern music cannot possibly be overestimated. Emotional expression depends almost entirely upon the choice of harmonies. The same melody harmonized differently is capable of expressing widely different moods and emotions. This is strongly illustrated by the leading motives in the works of Wagner. The same melodic phrase occurs frequently in a different harmonic garb in accordance with the varying demands of the dramatic situation. The development sections of Beethoven's symphonies and sonatas afford innumerable examples of wonderful and surprising effects produced by different harmonization of the original themes. Simple folk songs can be invested with a transcendent beauty by a judicious, refined harmonization. The works of Brahms, Dvořák, Grieg, and the modern Russian composers furnish abundant examples of this. It is highly interesting to compare the many harmonic settings of Luther's famous hymn, *Nun*

feste Burg ist unser Gott. Bach's wonderful setting cannot be surpassed (Ex. 1); and yet

Ex. 1.

what a different character does Wagner impart to this simple melody when he introduces it in his *Kaisermarsch* (Ex. 2). The three notes

Ex. 2.

constituting the melodic outline of the motive of Fate in the *Nibelungen* are surely insignificant enough in themselves. This motive derives its solemn and majestic character solely from the rich underlying harmony (Ex. 3). One

Ex. 3.

more example to prove the importance of harmony. The principal theme of the allegretto in Beethoven's A major Symphony is nothing but a rhythmic figure to which the name of melody can scarcely be applied. Yet, by means of the most marvelous harmonic combinations,

Ex. 4.

the master has transformed it into one of the most impressive and deeply emotional phrases to be found in the whole range of music (Ex. 4).

In the great masters the gift of harmony is inborn. Wagner expressly declares that no melody ever occurred to him apart from its harmonic basis. Yet a talent for harmony can be cultivated to a certain extent. Every thorough musician is capable of harmonizing a given melody in several ways. Besides the choice of the chords there is another important factor,

viz., the proper distribution to the different voices of the different tones composing a chord. This has to do with the leading of the voices and the rules to be observed in correct writing. It cannot be the object or purpose of an article like the present to attempt a technical exposition of so broad a subject as harmony. The following is therefore intended to give the general reader some idea of the scope and function of the various subjects comprised under the collective title of harmony.

Intervals. Under this heading the tones are treated in respect to the distance or difference in the degree of the scale that separates them one from the other. If two tones are sounded simultaneously, they form *harmonic* intervals; if sounded successively, *melodic* intervals. All intervals are reckoned from the fundamental tone of the scale. When the same tone is sounded on two different instruments, the interval is called a *prime*, both tones being on the same degree of the scale. The tone upon the second degree forms the interval of the second with the fundamental tone, and so on, until the eighth degree is reached, which is the same as the first, one octave higher. Generally all intervals are reckoned within one octave; thus, C-e² is a third, although the two tones are separated by more than three octaves. For theoretical purposes, however, the intervals of the ninth, tenth, eleventh, and twelfth are recognized. Intervals are classed as *consonant* and *dissonant*, and again as *major*, *minor*, *augmented*, *diminished*, and *perfect*. See INTERVAL.

Chords. Under this heading are treated the nature and formation of chords. The fundamental chord is the triad consisting of three tones, the prime, third, and fifth. According as the major or minor third is used, the chord itself is major or minor. The presence of an augmented or diminished interval renders the chord likewise augmented or diminished. All

chords are constructed by means of thirds (Ex. 5). By adding the interval of a third to any

TRIADS

Major. Minor. Augmented. Diminished.

Ex. 5.

triad a chord of the seventh is obtained, so called because the last added tone forms the

interval of a seventh with the fundamental tone of the chord (Ex. 6). All chords can be inverted; i.e., any tone of a chord can be in the bass, or lowest part. When the fundamental tone is in the bass, the chord is said to be in its fundamental position. With the third in the bass we obtain the first inversion; with the fifth in the bass we have the second inversion (Ex. 7). Chords of the seventh

Ex. 6.

INVERSION OF TRIADS

Fundamental. First inversion. Second inversion.

Ex. 7.

admit three inversions (Ex. 8). With respect to the relative position of the various tones composing a chord, a distinction is made between *close* and *open*, *spread* or *extended* harmony.

INVERSIONS OF CHORD OF SEVENTH

Fundamental.

First inversion.

Second inversion.

Third inversion.

Ex. 8.

In Ex. 9 the first chord (a) is in *close* harmony because none of its tones can be transposed an octave and still fall within the other tones of the chord. The second chord (b) is in *open* harmony because, by transposing the E an octave, it falls between the tones C and G of the chord (Ex. 9). Likewise, transposing the G an octave lower, it falls between C and E.

Progression of Chords. Each tone composing a chord is regarded as belonging to a distinct voice or part. The laws governing the progression of chords are exceedingly few and simple, yet it requires long and constant practice to acquire the art of leading the voices correctly. 1. Parallel octaves and fifths are strictly forbidden. This means that two tones of one chord forming the interval of an octave or a fifth must not progress in such a manner as to form the same interval in the next chord (Ex. 10). The example under (a) is bad because the progressions c-d and f-g produce

Ex. 9.

Ex. 10.

fifths in both chords. The correct progression is given under (b). Octaves and fifths may be open or covered. They are open, as in Ex. 10 (a), when the forbidden intervals occur in both chords; covered when they occur only in the

second chord as the result of parallel motion, as in the following (a, Ex. 11). These covered

Ex. 11.

fifths can be avoided by leading the voices, as under (b). 2. The leading tone can never be doubled. As the leading tone always demands the progression of a semistep upward into the octave, it is clear that a doubling of this tone would necessitate the faulty progression of open octaves. 3. Chords must not progress so as to produce an inharmonic relation. This means that a tone of one chord cannot appear chromatically altered in the next chord, except in the same voice. For instance, if *g* appears in one chord in the tenor part, a *g#* or *gb* can be introduced in the succeeding chord *only* in the tenor part. In the following example the faulty pro-

gression under (a, Ex. 12) is corrected under (b). 4. The interval of the seventh is never to be doubled; neither is any augmented or diminished interval to be doubled, for all such intervals are dissonant, and hence are sufficiently prominent if they occur in only one voice. See LEADING OF VOICES.

With respect to one another the different voices may proceed in *parallel*, *contrary*, or *oblique* motion. The motion is *parallel* if both voices either rise or fall together; *contrary* when one rises and the other falls; *oblique* when one remains on the same tone, while the other either rises or falls (Ex. 13). With respect to the number of voices employed, a distinction is made between two-part, three-part, four-part, etc., writing. The kind most generally used is the four-part. As a triad contains only three tones, it is evident that in four-part writing one of the intervals must be doubled. This is generally the fundamental tone, often also the fifth, seldom the third. In two-part writing some interval must be omitted and this is almost always the fifth. The number of parts is not restricted. There are compositions for as many as 24, and even 32 parts. Of course it requires absolute mastery to handle such a number of parts. See MOTION (in music).

Anticipations, Suspension, Resolution. Tones may also appear in other chords than the ones to which they belong. When one or more voices proceed to tones of the next chord, while the remaining voices sustain the harmony of the first chord, *anticipation* occurs. *Suspension*

Ex. 12.

takes place when one or more voices hold the tone of the previous chord when the other voices have already proceeded to the harmony of the next chord. As the tones thus held do not belong to the chord with which they are sounded, they cause a dissonance. All dissonances require resolution into consonant chords. Anticipation occurs upon either the strong or weak beat of a bar; suspension only on the strong beat. Suspension, moreover, requires *preparation*, i.e., the tone suspended must occur in the previous chord as an essential element. The preparation takes

than the fundamental tone of the dominant chord. A *half cadence* is the resolution of the tonic into the dominant chord, the reverse of the *whole cadence*. Instead of the tonic chord other triads may be used, especially those of the second, fourth, or sixth degree. A half cadence that occurs very frequently and is very beautiful is the *Phrygian cadence*. It consists of the resolution of the subdominant into the dominant in the minor mode. The *plagal cadence* is the resolution of the subdominant into the tonic chord. The cadences just mentioned are the

Ex. 13.

place upon the weak beat, while the suspension itself occurs upon the strong beat (Ex. 14).

Passing Notes and Changing Notes. By passing notes are meant notes of short duration that do not affect the harmony, but only serve as a connective element between chords, as in Ex. 15 (passing notes marked*). A changing note is one that lies a second above or below a tone belonging to a chord. Whereas passing notes occur always in passages progressing by

ones most frequently used at the close of a composition. But at the end of a phrase or section a close known as the *deceptive*, or *interrupted*, *cadence* is frequently found. This consists of the resolution of the dominant into some chord other than the tonic. A *mixed cadence* is the succession of the subdominant, dominant, and tonic chords, thus constituting a mixture of the authentic and plagal cadences. Besides the cadences enumerated, others not specially classi-

Ex. 14.

Ex. 15.

Ex. 16.

steps, changing notes generally proceed by skips, as Ex. 16 shows (changing notes marked*).

In the above examples only the soprano contains the passing and changing notes. It is possible, however, to have more or all voices move in notes of the same value as the soprano. The different tones of the different voices then form chords. All chords containing one or more of the notes marked* would then constitute *passing chords*.

Cadences. It is important to pay attention to the closing of a piece. The two principal cadences are the *authentic* and the *plagal*. The authentic cadence is the resolution of the dominant chord into the tonic. When the soprano has the fundamental tone of the tonic, and the bass the fundamental tone of both the dominant and tonic chords, the close is called a *whole cadence*. It is at the same time a *perfect cadence*. The *whole cadence* is *imperfect* when the soprano has any other interval than the fundamental of the tonic, or the bass any other

fixed also occur. Thus, the chord of the diminished seventh sometimes takes the place of the dominant or subdominant (Ex. 17).

Modulation. Although every composition is written in a certain key, wearisome monotony would result were the composer to restrict himself only to chords properly belonging to that key. Chords belonging to other keys are introduced with more or less frequency. Every such departure from the original key is a modulation. To modulate with artistic effect, the relation of the keys and the chords belonging to each must be thoroughly understood.

While pursuing the study of harmony, the student at the same time is trained in the science of figured bass. It is the rule followed in all modern treatises on harmony to write out the exercises in figured bass notation. This indicates the choice of chords, whereas the leading of the voices and the distribution of the tones are left to the student. Every great master has widened and enriched the field of har-

mony. While the theorists have speculated, groped in the dark, and often formulated arbitrary rules, which have nothing to do with the unchangeable fundamental laws, genius intuitively worked in accordance with laws. Of course there resulted the inevitable clash between rules and laws; hence that violent opposition in the past of theorists against contemporary genius. In this respect the influence of Wagner has had far-reaching consequences, and set the pendulum swinging to the other extreme. To-day a composer may dare anything and yet

that the end has not yet been reached. Debussy even goes so far as to maintain that, inasmuch as every single tone comprises within itself the entire scale as overtones (harmonics), there can be no dissonance; from which premises he argues further the nonexistence of tonality. It is not the function of this article to prove the fallacy—scientifically demonstrable—of such argument. If Debussy's claim were true, it would follow logically that his art must stand in the same relation to that of Bach, Beethoven, and Wagner as does theirs to the art of Huchald.

Ex. 17.

be sure of an enthusiastic following. Since the beginning of the present century Richard Strauss and Debussy (with their followers) have been the two principal causes of a really wonderful advance in harmonic combinations. Modern theorists, instead of condemning the new because it seems to run against accepted theories, have approached the innovations in a spirit of intelligent sympathy and discovered the difference between rule and law. They have found that the laws of harmony are few, simple, and universally valid. And, strangest of all, these laws and immutable principles were discovered centuries ago; but the inability of theorists to perceive the simple truth caused these valuable discoveries to fall into utter oblivion. Zarlino's discovery, published in 1558, has already been referred to. Rameau in 1722 declared that the simplest melodic phrase ought always to be conceived as a harmonic progression of chords; that all dissonant chords bear a relation to some consonant chord of which they are only modifications; that there can be only three fundamental harmonic functions—those of the Tonic, Dominant, and Subdominant—and that all modulation is merely interchange of these functions. Upon these simple principles the entire science of modern harmony is built.

In the last analysis the history of the development of harmony is the history of the development of the human ear in growing accustomed to dissonance (not discord). Every generation has progressed over its predecessor, and it seems

Bibliography. Of the older works the following are still of value: F. J. Fétis, *Esquisse de l'histoire de l'harmonie* (Paris, 1840); *Traité de l'harmonie* (11th ed., ib., 1875); M. Hauptmann, *Die Natur der Harmonik und Metrik* (2d ed., Leipzig, 1873); A. B. Marx, *Die Lehre von der musikalischen Komposition* (rev. by H. Riemann, ib., 1889); E. F. Richter, *Manual of Harmony* (trans. by T. Baker, New York, 1912). More modern are: H. Riemann, *Skizze einer neuen Methode der Harmonielehre* (Leipzig, 1880; elaborated later as *Handbuch der Harmonielehre*, 4th ed., ib., 1908); *Die Natur der Harmonik* (ib., 1882); *Das Problem des harmonischen Dualismus* (ib., 1905); F. A. Gevaert, *Traité d'harmonie* (Brussels, 1908); G. W. Chadwick, *Harmony* (Boston, 1909); F. J. Lehmann, *Harmonic Analysis* (Oberlin, 1910); P. C. Buck, *Unfigured Harmony* (London, 1911); H. V. Hughes, *Early English Harmony* (ib., 1913); Percy Goetschius, *Material Used in Musical Composition* (14th ed., New York, 1913). The most recent, attempting the analysis of the "ultra-modern" school, are: L. Villermin, *Traité d'harmonie ultra-moderne* (Paris, 1911); C. R. Blum, *Das moderne Tonssystem in seiner erweiterten und vervollkommenen Gestaltung* (Berlin, 1912); D. Alaleone, *L'Armonia modernissima* (Turin, 1912); R. Lenormand, *Étude sur l'harmonie moderne* (Paris, 1913). See ACOUSTICS; FIGURED BASS; HARMONICS; INTERVAL; KEY; LEADING OF VOICES; MAJOR; MINOR; MODULATION; MOTION; TONALITY.

HARMONY OF THE SPHERES, or MUSIC OF THE SPHERES. It was a common belief among the ancients that the motions of the stars and planets produce a kind of music, which they called the harmony of the spheres. They attributed this music to the various proportionate impressions of the heavenly bodies on one another acting at proper intervals.

HARMONY, PREESTABLISHED. See PRE-ESTABLISHED HARMONY.

HARMOST (Gk. ἡρμόστης, *harmostes*, joiner, adjuster, governor). A name given by the Spartans to the governors whom, after the Peloponnesian War, they sent into the towns subject to them, to keep the towns in subjection and to establish in them the form of government which obtained at Sparta itself. Even after the Peace of Antalcidas the Spartans kept harmosts in the towns which, by the terms of the peace, they had promised to set free. The harmosts frequently acted like kings or tyrants; Xenophon (q.v.), friendly though he was to the Spartans, condemns them for suffering the harmosts to govern as they did. It is thought that the harmost held office for one year.

HARMS, *härms*, FRIEDRICH (1819-80). A German philosopher, whose concept of philosophy as the science of the absolute approaches Fichte. He was born at Kiel and educated there and in Berlin. In 1848 he was appointed professor of philosophy at Kiel and in 1867 at Berlin. His writings are critical and historical rather than constructive and, although marked by depth of thought, fail in clearness of style. Among them are: *Der Anthropologismus seit Kant* (1845); *Prolegomena zur Philosophie* (1852); *Die Philosophie Fichtes* (1862); *Schopenhauers Philosophie* (1874); *Die Philosophie seit Kant* (1877); *Ueber den Begriff der Wahrheit* (1876); *Die Formen der Ethik* (1878); *Metaphysik* (1885), *Logik* (1886), *Ethik* (1889), *Naturphilosophie* (1895), *Psychologie* (1897)—all edited by Wiese; and *Begriff, Formen und Grundlegung der Rechtsphilosophie* (1889).

HARMS, KLAUS (1778-1855). A distinguished German theologian. He was born May 25, 1778, at Fahrstedt. In 1797 he went to the Gymnasium at Meldorf and in 1799 to the University of Kiel. After supporting himself as family tutor from 1802 till 1806, he was appointed deacon of Lunden, whence he was called in 1816 to Kiel, as archdeacon in the Nikolai Church. Next year, shortly before the tricentenary of the Reformation in Germany, he issued, in defense of Protestant orthodoxy, the 95 theses of Luther, together with 95 other theses "translated from 1517 to 1817" (Eng. trans. of most of them in *Lutheran Church Review*, 1889). These attacks on rationalism produced a deep impression throughout Germany and brought him a call to be Bishop of the consistory about to be instituted for the Protestant church of Russia. This, as well as a call in 1834 to succeed Schleiermacher in Trinity Church, Berlin, Harms refused. In 1835 he was made chief pastor and provost in Kiel, but was compelled to resign in 1849, because of almost total blindness. The rest of his life was spent in retirement, devoted to literary activity. He died in Kiel, Feb. 1, 1855. Harms's published works are chiefly sermons, which may be reckoned among the best specimens of modern pulpit eloquence in Germany. Of these, the most famous are his *Winterpostille* (1808; 6th ed., 1846) and *Sommer-*

postille (1815; 6th ed., 1846), to which a new series was added—*Neue Winterpostille* (1826) and *Neue Sommerpostille* (1827). Consult: Dorner, *Blätter der Erinnerung an das Jubiläum von Harms* (Kiel, 1842); *Harms' Lebensbeschreibung verfasst von ihm selbst* (ib., 1851; 2d ed., 1852); and for his life, Kaftan (Basel, 1875); Lüdemann (Kiel, 1878).

HARMS'WORTH, ALFRED (CHARLES WILLIAM. See NORTICLIFFE, BARON.

HARMSWORTH, HAROLD SIDNEY, first BARON ROTHERMERE (1868—). An English newspaper publisher, brother of A. C. W. Harmsworth, Baron Northcliffe, with whom he was associated. He was intimately connected with the territorial volunteer movement, endowed (1911) the Edward VII chair of English literature at Cambridge, in 1910 was created Baronet, and in 1914 was made Baron.

HARMSWORTH, HILDEBRAND (1872—). An English journalist, educated at Merton College, Oxford. In his teens he had gone into journalism with his brothers, Alfred (Lord Northcliffe) and Harold Harmsworth. He contested Gravesend in 1900 and Mid Salop in 1906, but had not the success of his brother Robert Leicester (born 1870), returned in 1900, or the other brother Cecil Bisschop (born 1869), returned in 1911. With the latter he edited the *New Liberal Review* (1901). Hildebrand Harmsworth joined Joseph Chamberlain's fiscal reform party in 1904. In 1907 he became proprietor of the *Globe*.

HARNACK, *här'nák*, ADOLF (1851—). One of the foremost of modern Church historians. He was born at Dorpat, Russia, May 7, 1851, educated at the university there (1869-72), became privatdocent at Leipzig (1874), professor extraordinary of Church history there in 1876; ordinary professor of Church history at Giessen (1879), at Marburg (1886), and at Berlin (1889). A man of strong and inspiring personality, his lectures at Berlin were attended by hundreds of students from both Europe and America. His editorial activity was great, as is attested by the fact that from 1881 he edited with E. Schürer the *Theologische Literaturzeitung*, a semimonthly critical review (Leipzig, 1876 et seq.), and from 1882 with O. von Gebhardt the *Texte und Untersuchungen zur Geschichte der altchristlichen Literatur* (Leipzig, 1882—), a series of learned monographs to which he also contributed. He also joined Von Gebhardt and T. Zahn in bringing out *Patrum Apostolicorum Opera* (3 vols., Leipzig, 1875-77). But his fame chiefly rests upon his separate publications, some of which are: *Zur Quellenkritik der Geschichte des Gnosticismus* (1873); *Die Zeit des Ignatius* (1878); *Das Mönchtum* (1881; 5th ed., 1901; trans., *Monasticism: Its Ideals and its History*, 1895; with article on *The Confessions of St. Augustine*, 1901); *Martin Luther in seiner Bedeutung für die Geschichte der Wissenschaft und der Bildung* (1883; 3d ed., 1901); *Lehrbuch der Dogmengeschichte* (1886-90; 3d ed., 1894-97; En. trans., *History of Dogma*, 1895-1900); *Grundriss der Dogmengeschichte* (1889; 3d ed., 1898); *Das apostolische Glaubensbekenntnis* (1892; 27th ed., 1897; trans., *The Apostles' Creed*, 1901); *Geschichte der altchristlichen Literatur bis Eusebius*: vol. i, *Die Ueberlieferung und der Bestand der altchristlichen Literatur* (1893); vol. ii, *Die Chronologie der Litteratur bis Irenäus* (1897); *Das Christentum und die Geschichte*

(1895; 4th ed., 1897; trans., *Christianity and History*, 2d ed., 1901); *Das Wesen des Christentums* (1900; trans., *What is Christianity?* 1901); *Die Mission und Ausbreitung der Christentums* (1902; Eng. trans., *The Expansion of Christianity*, 1905); *New Testament Studies* (3 vols., 1907-09); *Constitution and Law of the Church in the First Two Centuries* (1910); *Bible Reading in the Early Church* (1912).

HARNACK, AXEL (1851-88). A German mathematician, son of Theodosius Harnack (q.v.), and twin brother to Adolf Harnack. Born at Dorpat, he studied there (1869-73) and then at Erlangen and Munich. He was privat-docent at Leipzig in 1876, professor in the Polytechnic Institute at Darmstadt and then at Dresden. Besides several contributions to the *Mathematische Annalen* (vols. ix, x, xii, xiii, xiv, xvii, xix, xxi), he wrote: *Elemente der Differential- und Integralrechnung* (1881) and *Grundlagen der Theorie des logarithmischen Potentials und der Potentialfunktion in der Ebene* (1887). Consult the biography by Voss, in the *Mathematische Annalen*, vol. xxxii (Leipzig, 1894).

HARNACK, THEODOSIUS (1817-89). A German Lutheran theologian, father of Adolf and Axel (qq.v.). He was born at St. Petersburg, Russia, Jan. 3, 1817, was educated at Dorpat and taught there (1843-53), at Erlangen (1853-66), Dorpat again (1866-75), when he retired. He died at Dorpat, Sept. 11, 1889. His specialty was practical theology, and he wrote *Liturgische Formulare* (1872-74), *Praktische Theologie* (1877-78), and other books in that department. His work was influential in Lutheran liturgics.

HARNED, HÄR'NĒD, VIRGINIA (1868-). An American actress, formerly the wife of E. H. Sothern, from whom she was divorced in 1910. She was born in Boston and when about 16 first became a member of a traveling company. Her New York debut was in *A Long Lane* at the Fourteenth Street Theatre (1890). In 1895 she appeared as Trilby in Paul Potter's dramatization. Prominent among her subsequent parts have been Lady Ursula in *The Adventure of Lady Ursula* (1897); Ophelia, to Mr. Sothern's Hamlet (1900); Alice Rousillon in *Alice of Old Vincennes* (1901); and Iris in A. W. Pinero's play of the same name (1902). Consult Strang, *Famous Actresses of the Day in America* (Boston, 1899), and William Winter, *The Wallet of Time* (2 vols., New York, 1913).

HARNESSE. See SADDLERY.

HARNESSE, WILLIAM (1790-1869). An English author and divine, educated at Harrow, where he formed a lifelong friendship with Byron, and at Christ's College, Cambridge (B.A., 1812; M.A., 1816). He entered holy orders and became known as one of the most eloquent preachers in London. By his efforts was built the church of All Saints, Knightsbridge (1849), of which he was perpetual curate till his death. Many of his sermons were published, but he is now remembered chiefly for his edition of Shakespeare (8 vols., 1825). Consult L'Estrange, *Literary Life of Harness* (London, 1871).

HARNESS CASK. A large wooden cask, commonly shaped like the frustum of a cone, flattened at the sides, and used on board ship for the temporary stowage of salt provisions which are intended for issue to the crew within a day or two. Sailors call salt beef *salt horse*, and of course a *harness* is the most natural thing to be around a horse—hence the name.

HARNESSED ANTELOPE. A bush buck of the genus *Tragelaphus*, so called because most of them have irregular stripings and spottings of white on a dark ground, suggesting a harness. Most of them belong to the jungles of West and South-Central Africa, and the list includes the bongo and guib (see BUSH BUCK), the nyala and sitatunga. See Colored Plate of ANTELOPES: GUIB.

HARNETT, CORNELIUS (1723-81). An American patriot, born in Chowan Co., N. C. He served in the Colonial Assembly from 1754 to 1775, was an early and energetic opponent of the Stamp Act, was chairman of the joint Wilmington and New Hanover Committee of Safety in 1774-75, served in the Continental Congress in 1777-79, and signed the Articles of Confederation. He took an active part in the framing of the constitution of North Carolina, opposing the effort to secure the establishment of the Church of England as a part of the proposed government. In Congress he urged the importance of maintaining in the States effective military organizations for the national defense and of fortifying the seacoast. For his various activities he was proscribed by Governor Martin in 1775, while in the following year Sir Henry Clinton expressly excluded him (and Robert Howes) from his offer of amnesty proclaimed at Wilmington. Early in 1781 he was captured near Wilmington by British troopers under Major James H. Craige, who treated him with cruelty, confining him in a roofless blockhouse for several weeks. In consequence of this exposure he died soon after he had been paroled. Josiah Quincy, Jr., of Massachusetts, who met Harnett in 1773, while traveling in the South, styled him "the Samuel Adams of North Carolina." Consult Connor, *Cornelius Harnett* (Raleigh, 1909).

HARNEY, JOHN HOPKINS (1806-67). An American journalist, born in Bourbon Co., Ky. He graduated at Oxford University, Ohio, in 1827, was appointed professor of mathematics at the University of Indiana (1828) and Hanover College (1833), and then became president of a college in Louisville, Ky. (1839-43). He published an *Algebra* for school use in 1840. From 1844 until his death he edited, at Louisville, the *Democrat*, in which he vigorously denounced the arrest and deportation of citizens by the military authorities, when the State was invaded by Confederate troops. After the war he advocated conciliatory measures. In 1861 he was a member of the State Legislature.

HARNEY, WILLIAM SELBY (1800-89). An American soldier, born near Haysboro, Tenn. He entered the United States army and rose to be lieutenant colonel of dragoons in 1836. He served in the Black Hawk War, in the Florida War, and in expeditions into the Everglades, and during the Mexican War was brevetted brigadier general for gallantry at Cerro Gordo. In 1858 he was appointed to the command of the Department of Oregon and subsequently to that of the Department of the West. In 1861, while journeying to Washington, he was taken prisoner by Confederates and brought to Richmond. Upon his release he issued proclamations to the people of Missouri, describing the evils certain to follow from secession. He was retired in 1863 and in 1865 was brevetted major general. Consult Reavis, *Life and Military Services of Gen. W. S. Harney* (St. Louis, 1878).

HARŌĒRIS, HÄR'Ō-ĒRIS, or HARŪĒRIS, "HORUS THE ELDER" (from *Har*, *Horus* + *uēr*.

great, adult). An Egyptian god. Originally he was merely a phase of the sun god Horus, representing the sun in summer, or taking the daily course as the type of the yearly, the sun at its full height, at noon. He is regularly represented as a hawk-headed king, wearing the two crowns of Egypt. Originally he was the son of Osiris and his sister Isis, conceived while his parents were in the womb of their mother, Nût (i.e., the sky). Later, however, when the two phases of the young and the adult sun were represented by two distinct deities, he became not only a brother of Harpocrates (q.v.), but even a brother of Osiris and son of Nût, the sky, and Seb (or Gêb?), the earth (Plutarch: Rhea and Kronos), while other inscriptions make him son of other forms of the old Sun (Râ, or Atum). He was specially the god of southern Egypt. See HOBUS; HARPOCRATES.

HAROLD I, surnamed **HAREFOOT** (probably on account of his swiftness). King of England from 1037 to 1040. He is believed to have been the younger of Canute's two sons by his first wife, Ælfgifu. According to agreement on Canute's second marriage to Emma, widow of Ethelred II, his son by Emma was to inherit the English as well as the Danish throne; this son, Hardecanute (q.v.), was, however, in Denmark at the time of his father's death in 1035. Leofric, Earl of Mercia, favored the cause of Harold, while the powerful Earl Godwine espoused that of Hardecanute. Civil war was averted by a compromise, and the kingdom was divided. Harold took London, with all the provinces north of the Thames, while the possession of Wessex was given up to Emma for Hardecanute. She fixed her residence at Winchester and established her authority over her son's share of the kingdom. In 1037 the thanes and people of Wessex, disgruntled by Hardecanute's prolonged absence in Denmark, submitted to Harold, and he was crowned King of all England. He is said treacherously to have slain the Ætheling Ælfred, the younger of the two sons of Ethelred and Emma, whom he had invited to England. He died at Oxford, March 17, 1040. Consult: Freeman, *The Norman Conquest*, vol. i (New York, 1877); Oman, *England before the Norman Conquest* (ib., 1910); Hodgkin, *History of England* (London, 1906).

HAROLD II (c.1022-66). King of England in 1066. He was probably the second son of the powerful Earl Godwine. In 1045 Harold was Earl of East Anglia. In 1051, when Godwine fell into disgrace with Edward the Confessor, Harold raised troops in Ireland and plundered the English coast until reestablished in his earldom. After his father's death, in 1053, Harold inherited the Earldom of Wessex and all his father's property and power and became the head of the National party, which sought to counteract the Norman influence at the court of Edward the Confessor. In 1063, with his brother Tostig, he invaded Wales and inflicted such a terrible chastisement on the inhabitants that the English frontier was safe from their raids for three-quarters of a century. It was probably in 1064 that he made his visit to Normandy and took an oath to assist William in obtaining the English crown. The common legend is that Harold was shipwrecked on the coast of Normandy and fell into the power of Duke William, who forced him to swear on a chest full of sacred relics that he would aid him in his design. On the death of Edward the Confessor, Jan. 5, 1066, the Witan

(q.v.), in the exercise of its rights, set aside the claims of Edgar Atheling, the grandson of Edmund Ironside, and, ignoring the reputed bequest of the late sovereign in favor of the Duke of Normandy, elected Harold to fill the vacant throne. Duke William immediately asserted his claim, which was supported by Harold's brother Tostig, who had been dispossessed of his Dukedom of Northumbria, and Harald Haardraade, King of Norway, his ally. Tostig and the Norwegian King landed on the coast of Yorkshire and, after defeating Eadwine and Morkere, Earls of Northumbria and Mercia, advanced to York, but were met by Harold at Stamford Bridge and totally routed, Sept. 25, 1066. A few days later William landed in England; the contending armies met at Senlac, about 7 miles from Hastings (see HASTINGS, BATTLE OF), where Harold's defeat and death, Oct. 14, 1066, made the Duke of Normandy undisputed ruler of England. Consult: Freeman, *The Norman Conquest*, vols. ii and iii (Oxford, 1877); Green, *The Conquest of England* (London, 1883); Oman, *England before the Norman Conquest* (New York, 1910); Hodgkin, *History of England* (London, 1906). See ANGLO-SAXONS; ENGLAND.

HAROLD I AND HAROLD III. Kings of Norway. See HARALD.

HAROLD, OR THE LAST OF THE SAXON KINGS. An historical novel, founded on the life of Harold II of England, by Bulwer-Lytton (1848).

HAROUN AL-RASHID, hæ-rūn' al-rā-shēd'. See HARUN AL-RASHID.

HARP (AS. *hearpe*, Icel. *harpa*, OHG. *harpha*, Ger. *Harfe*, Lat. *harpa*, of unknown etymology). A musical stringed instrument, much esteemed by the ancients. In Egypt the figure of the harp is found delineated from the earliest ages in many different forms. The Celtic bards held the harp in the greatest honor. In the Highlands of Scotland the instrument has disappeared, but it is still in use in Wales, and to some extent it lingers in Ireland, where, from its former prevalence, it is adopted as a national symbol. During the Middle Ages the Irish harp (q.v.) excelled all others, and the Irish harpers were reputed the greatest masters of the instrument. The harp was used as an accompaniment to the psalms sung by the early congregations of Christians. The double harp—or, as it is also called, David's harp—is an instrument in the form of a triangle, with a sounding board and gut strings; it is always tuned in the principal key of the music, while the strings are altered to suit any modulations out of the key, by pressure of the thumb, or turning the tuning pins of certain notes. These defects led gradually to the invention of the pedal harp, which has seven pedals, by which each note of the diatonic scale, in all the different octaves, can be made a semitone higher. A celebrated harpist, Hochbrucker, in Donaauwörth, invented the pedals in 1720; while J. Paul Velter, in Nuremberg, in 1730, added the piano and forte pedal. After numerous attempts at further improvements the harp at length reached a degree of perfection by the invention of the double-action pedal harp by Erard in Paris in 1820. By means of Erard's invention each string can be sharpened twice, each time a semitone; so that the C string may be C flat, its full length, C natural by the first movement of the pedal, and C sharp by the next movement. The double-action harp is tuned with all the pedals half-down and in the key of C nat-

ural. It has 46 or 47 strings and a compass of over six octaves from C_2 - g_4 . The music is written on two staves, exactly as for the pianoforte. The instrument is now found in all large orchestras. For producing beautiful arpeggio effects the harp has no rival. In the final scene of *Das Rheingold* (the entrance of the gods into Walhalla) Wagner employs no less than eight harps. At various times attempts have been made to construct chromatic harps, but the great number of strings has rendered such instruments impracticable. In 1708 Edward Light brought out his dital harp, an ingenious combination of harp and lute. In 1913 an American, M. A. Clark, patented a much-improved model of the old Irish harp. Consult: H. Panum, *Harfe und Lyra im alten Nordeuropa* (Leipzig, 1906); J. Snøer, *Die Harfe als Orchesterinstrument* (ib., 1898); W. H. Grattan-Flood, *The Story of the Harp* (New York, 1905). See IRISH HARP.

HARPALUS (Lat., from Gk. Ἀρπάλος) (c.330 B.C.). Kinsman and comrade of Alexander the Great. Made chief of the treasury in the expedition to Asia, he was found guilty of embezzlement. Alexander pardoned him and in 330 made him custodian of the immense Persian treasure at Ecbatana. After squandering enormous sums in the most reckless manner Harpalus fled to Athens (325) with 5000 talents, which he employed in purchasing the good will of leading citizens, among them, it is said, Demosthenes (q.v.). From Athens he went to Crete, where he was assassinated.

HARPER, JAMES (1795-1869). An American publisher, born at Newtown, L. I. In 1811 he removed with his brother John (1797-1875) to New York, where they learned the trade of printing and established the firm of J. and J. Harper, printing for booksellers and publishers. James Harper was said to be the quickest and best pressman in New York City, and the proof reading of John Harper had an equal reputation. They published on their own account from 1818 to 1833, when with two younger brothers, Joseph Wesley (1801-70) and Fletcher (1806-77), they formed the firm of Harper and Brothers. The keen business sagacity and sterling honesty of James Harper soon made the firm one of the largest and most respected publishing houses in the United States. He was notably successful with series of books grouped into so-called "libraries," covering topics ranging from juvenile fiction to the classics, and founded *Harper's Magazine* in 1850, which with the two publications suggested by Fletcher Harper—*Harper's Weekly*, established in 1857, and *Harper's Bazar*, established 10 years later—soon took high rank in the field of periodical literature. The series was supplemented in 1881 by *Harper's Young People*, afterward called *Harper's Round Table*. In 1913 *Harper's Weekly* was sold, and the *Bazar* had already changed hands. From 1844 to 1846 James Harper was mayor of New York City and was subsequently suggested for State Governor, but his distaste for public life led him to discountenance all efforts in his behalf. In March, 1869, he was thrown from a carriage and killed, and for many years after his death the business of the firm was conducted by younger members of the family. After the failure of the firm in 1890 it was entirely reorganized as a stock corporation, George Harvey (q.v.) becoming president in 1900. Consult J. H. Harper, *The House of Harper* (New York, 1912).

HARPER, JOHN MURDOCH (1845-). A

Canadian educator and author. He was born at Johnstone, Renfrewshire, Scotland, emigrated to Canada, and graduated at Queen's University, Kingston. His success as the head of important schools in Nova Scotia and New Brunswick induced the government of Prince Edward Island to appoint him in 1877 superintendent of education for the province. Having declined this appointment, he later became principal of the Provincial Normal School at Charlottetown, in 1880 rector of the Quebec High School, and in 1888-1903 was inspector of superior schools for Quebec Province. For a time he was professor of mathematics in Morrin College, Quebec. For many years he was editor of the *Educational Record*, and he was also elected a vice president of the Quebec Literary and Historical Society and of the Dominion Education Association. He published many brochures and editions of textbooks.

HARPER, ROBERT ALMER (1802-). An American botanist. He was born at Le Claire, Iowa, and graduated from Oberlin College in 1836, and from the University of Bonn (Ph.D.) in 1836. He taught Latin and Greek at Gates College in 1836-38 and was professor of botany and geology at Lake Forest University (1891), professor of botany at the University of Wisconsin (1898-1911), and afterward professor of botany at Columbia. He became a member of various scientific societies and is known for his work on the physiology of lower plants and the cytology of the fungi.

HARPER, ROBERT FRANCIS (1864-1914). An American Assyriologist. Born at New Concord, Ohio, he graduated from the University of Chicago in 1883 and from Leipzig (Ph.D.) in 1886, taught at Yale (1886-88 and 1889-91), and was associate professor of Semitic languages and literatures at the University of Chicago (1892-1900), and then professor till his death. He went to Assyria for the University of Pennsylvania in 1888-89 and for the British Museum in 1891-92, directed an expedition to Babylonia in 1903-06, and in 1908-09 was director of the American School for Oriental Study and Research, in Palestine. He became a curator in the Haskell Oriental Museum in 1900, after 1907 edited the *American Journal of Semitic Languages*, and was associate editor of the *Biblical World* and of the *American Journal of Theology*. He published: *Assyrian and Babylonian Letters Belonging to the Kouyunjik Collections of the British Museum* (13 parts, 1892-1913); *Babylonian and Assyrian Literature* (1901); *The Code of Hammurabi* (1904).

HARPER, ROBERT GOODLOE (1765-1825). An American lawyer and politician, born near Fredericksburg, Va. He was early taken by his parents to South Carolina, and at the age of 15 served in the volunteer militia of South Carolina during Greene's last campaign against Cornwallis in the South. After the close of the war he entered Princeton College, where he graduated in 1785. The following year he was admitted to the bar at Charleston, S. C., and removed into the interior of the State to practice. He was an ardent Federalist and wrote and spoke in favor of the adoption of the Federal Constitution. After several terms in the State Legislature, he was, in 1795, elected to Congress, where he served until 1801. He was a fluent speaker and a ready debater, and his able advocacy of the measures of Washington and Adams won for him a high place in the councils of the Federal-

ist party. In 1799-1801 he was the recognized leader of his party in the House. After the expiration of his Congressional term he removed to Baltimore, Md., where he married the daughter of Charles Carroll, of Carrollton, and became one of the leading lawyers in the country. He served in the War of 1812 as a major general in the Maryland militia. In 1803 he was the principal counsel for Judge Pickering in the impeachment proceedings brought against him, and in 1806, with Luther Martin and others, successfully conducted the defense of Justice Chase in his impeachment trial. He was elected United States Senator from Maryland in 1816, but resigned in the same year because of his candidature for the Federalist nomination for Vice President, which, however, he failed to obtain. He was one of the principal promoters of the scheme for the colonization of free negroes in Africa which resulted in the establishment of Liberia. He published: *Observations on the Dispute between the United States and France* (1797); *Letters on the Proceedings of Congress; Letters to his Constituents* (1801). A collection of his letters, pamphlets, and addresses was published under the title of *Select Works of Robert Goodloe Harper* (1814).

HARPER, WILLIAM RAINY (1856-1906). An American Hebraist and educator. He was born in New Concord, Ohio, July 26, 1856, of Scotch-Irish ancestry. He graduated at Muskingum College in 1870 and in 1875 received the degree of Ph.D. from Yale. After teaching in the Masonic College, Macon, Tenn., and in the preparatory department of Denison University, Granville, Ohio, he became professor of Hebrew in the Baptist Union Theological Seminary in Chicago in 1879. While here he perfected a system of teaching Hebrew by correspondence. In 1886 he was elected professor of Semitic languages in the graduate faculty of Yale and in 1889 also professor of biblical literature. From 1885 to 1891 he served as principal of the Chautauqua College of Liberal Arts and in 1891 became principal of the Chautauqua system. In the last-mentioned year he was elected to the presidency of the newly founded University of Chicago, where he was also head professor of Semitic languages and literature. His published works include: *Elements of Hebrew* (2d ed., 1890); *Hebrew Vocabularies* (5th ed., 1890); *Hebrew Method and Manual* (1885); *Elements of Hebrew Syntax* (1888); *The Prospects of the Small College* (1900); *The Trend of Higher Education* (1905); "Amos and Hosea," in *The International Critical Commentary* (1905). He was the founder and editor of several publications, among them *The Hebrew Student* and *Hebraica*, and was one of the editors of the *Biblical World*, the *American Journal of Theology*, and the *American Journal of Semitic Languages and Literature*. For a picture of the Memorial Library erected in his honor, see Plate of CHICAGO UNIVERSITY.

HARPER'S FERRY. A town in Jefferson Co., W. Va., 56 miles northwest of Washington, on the Baltimore and Ohio Railroad and the Chesapeake and Ohio Canal (Map: West Virginia, G 2). Its site, in a valley formed by Bolivar, Maryland, and Virginia (or Loudoun) Heights, and at the confluence of the Shenandoah River with the Potomac, is one of remarkable beauty. The town is the seat of Storer College (Free Baptist), a normal school for negroes, contains a high school, and has pulp and paper mills. Pop., 1890, 958; 1910, 706.

Harper's Ferry is chiefly notable from its connection with the raid of John Brown (q.v.), who at the head of 18 men seized the armory here on Oct. 16, 1859, and held it until captured on the following day by United States troops under Gen. Robert E. Lee. On April 18, 1861, immediately after Virginia had seceded from the Union, the small Union garrison, consisting then of only 45 men under Lieut. Roger Jones, on the approach of a greatly superior force of Virginians under Gen. John Kenton Harper, abandoned the place and fired the Federal arsenal, destroying about 20,000 rifles and pistols and other property. The Confederates then gathered here a considerable force, which was first under Colonel Jackson, later known as "Stonewall" Jackson, and afterward under Gen. Joseph E. Johnston, both of whom energetically drilled and organized their troops. Johnston withdrew on June 15 and soon afterward another Union force took possession. The existence of a garrison here in September, 1862, compelled General Lee to divide the army of invasion which he was about to lead into Pennsylvania, and on the 15th General Jackson, after a prolonged bombardment, captured the place, securing about 12,500 prisoners and considerable material of war. Consult Johnson and Buel (eds.), *Battles and Leaders of the Civil War*, vols. i and ii (New York, 1887).

HARPES, hār'pēs (Neo-Lat., from Gk. ἄρπη, *harpe*, a sickle). This curious group of trilobites is very unlike other forms in that it exhibits a number of decidedly larval characters, notably in the head, which remains through life larger than the thorax and pygidium, and alone among all the trilobites bears functional visual spots, or ocelli, on the fixed cheeks. The great number of free segments is also a primitive feature. The head, or cephalon, with its broad crescent-shaped, pitted, marginal expansion, or limb, and the small prominent glabella from which the eye lines extend at right angles to the ocelli, presents a strange aspect. The group as represented by the genus *Harpes* in its old conception extends from the Ordovician to the Devonian. Lately the Ordovician forms have been separated under the name "Eoharpes," mainly on differences in the outline of the hypostoma. The most striking forms have been found in the Paleozoic rocks of Bohemia, *Harpes ungula* being the best known of them; but the genus is also represented in the Ordovician beds of Canada and the eastern United States. See TRILOBITE.

HARPIES. See HARPY.

HARPIGNIES, ār'pēnyé', HENRI JOSEPH (1819-1916). A French landscape painter. He was born at Valenciennes. He was a pupil of Achard in Paris and made his debut in the Salon of 1853. His first picture which commanded attention was "The Edge of a Wood on the Banks of the Allier" (1861). Harpignies was at first but little appreciated, but his seriousness of purpose, love of nature, and force of drawing at length told on both artists and public. His landscapes evince a fine sense of the structure of the land, and many of his pictures are noted for the justice of their retreating planes. His foreground and distances sustain frankly their relative positions on his canvases. He was Commander of the Legion of Honor and received several gold medals, among them the medal of honor at Paris in 1897. Among his oils are "View of Capri" (1855); "A Storm" (1859);

"Evening in the Campagna" (1866), in the Luxembourg Museum; "The Valley of Egerie" (1870), a decorative panel for the Opéra; "Le Saut du Loup" (1873), a view on the Allier, and "Moonrise" (1884), both in the Luxembourg; "Banks of the Sarthe" (1892), "Banks of the Rhone" (1897), and "Moonrise," in the Metropolitan Museum, New York. Harpignies is an able technician in water color in such works as "Garden of the Villa Medici," Rome; "Le Pont-Neuf," a bridge in Paris; "The Hour of the Wild Goose."

HARPOCRATES, "HORUS THE YOUNGER" (Lat., from Gk. Ἀποκράτης, *Harpokratēs*). The name given by the Greeks to a form of the ancient Egyptian god Horus. The Egyptian name, *Har-pekhrot*, means 'Horus, the child,' in opposition to Haroëris (q.v.), 'the adult Horus.' Therefore this god is usually depicted as a naked babe sucking his finger and wearing the plaited side lock, the sign of youth, at the right side of his head. Sometimes an amulet in the shape of a heart hangs around his neck; he usually wears one or both of the crowns of Egypt. Often he is represented as sitting on or emerging from a lotus flower, the divine flower growing in the primeval, chaotic waters from which the sun god first arose. Whether he was originally conceived as the young sun rising in the morning, as the sun at the winter solstice, or as the sun appearing in the primeval abyss, cannot well be determined; all three views are maintained. In Greek times the two forms of Horus, Harpocrates and Haroëris, were so strongly differentiated as to become two distinct deities, so that Harpocrates was understood as a posthumous brother of the "elder Horus," of weakly, immature form. The Greeks added the strange misconception of taking Harpocrates for a god of reticence, explaining his gesture with the finger as a sign demanding silence. Together with the other divinities of the Osirian circle, Harpocrates became very popular at Rome; but the continued misinterpretations of his cult (from a god of reticence he became a giver of oracles by dreams, etc.) seem to have led to abuses, and his worship was forbidden in the consulship of Gabinius, though it became very popular again in the days of Pliny.

As a distinctive divinity, Harpocrates represents one of the youngest personalities of the Egyptian pantheon. He is often identified with *Har-sam-toui*, 'Horus, uniting both countries,' more rarely with Khonsu, Atum, etc. Harpocrates was worshiped at Denderah, Esneh, Thebes; he had seven differentiated forms at Hermopolis. See also HAROËRIS.

HARPOCRATION (Lat., from Gk. Ἀποκράτωρ, *Harpokratōn*), VALERIUS. A Greek grammarian and lexicographer of Egypt, respecting whose personal history nothing is known. Some have considered him to be the Greek instructor of the Emperor J. Verus mentioned by Julius Capitolinus in his life of that Emperor, while others suppose that he lived some time later, because several passages are found in his works taken from Athenæus, who is supposed to have flourished about 200 A.D. Harpocraton is the author of a valuable lexicon to the 10 Attic orators, which contains much information on the antiquities and the general literature of Athens; this information includes notes on events and persons mentioned in the orators, explanations of legal expressions, etc. The value of this work is enhanced by the fact that all the authorities from which it has been

compiled are lost. It was edited by Dindorf (Oxford, 1853). Harpocraton is also the author of a lost work entitled *Collection of Flowery Extracts* ('Ἀνθρῶν Συγγραφή), ascribed to him by Suidas (q.v.). Consult Sandys, *A History of Classical Scholarship*, vol. i (2d ed., Cambridge, 1906).

HARP SEAL, or **SADDLEBACK**. A hair seal of the North Atlantic (*Phoca granlandica*), which wanders widely, but usually is numerous off the coasts of Greenland and southward to Newfoundland, gathers in herds about the ice floes, and is slaughtered by sealers in great numbers. It is yellowish white when fully adult (when the males have a black head), with an irregular circle of dark marks on the back, inclosing a space which somewhat resembles a harp or a saddle. To the Eskimos these seals are of value for food, and summer clothes as well as tents are made of the skins.

HARP SHELL (so called because the ribbing of the shell resembles the strings of a harp). A gastropod mollusk of the family Harpidæ, having the last whorl of the shell very large, the shell ribbed longitudinally, the foot of the animal very large. The species, which are not very numerous, are found in the warmer seas and particularly at Mauritius. The shells are much prized for their great beauty, but must be kept in drawers and not exposed to light, or their delicate and brilliant colors will fade.

HARPSICHORD, hürp'si-körd (OF. *harpe-chorde*, from *harpe*, harp + *chorde*, chord, cord). A keyed musical instrument, formerly in extensive use, but now little known. In shape it was exactly like a grand pianoforte, to which its internal arrangements were also similar. The sound from the strings was produced by a small

HARPSICHORD.

piece of crow-quill, or a piece of hard leather, which projected out of a slip of wood, called the jack, that stood upright between the strings and was pushed upward by the key till the quill, or leather, twitched the string, causing a brilliant but somewhat harsh sound, deficient of any means of modification in respect to loudness or softness. Specimens of the harpsichord, although now becoming quite rare, are still to be found in good preservation, but rather as articles of virtu or curiosity than as useful musical instru-

ments. Many Italian and Dutch harpsichords were highly ornamented by the most eminent artists with valuable oil paintings on the inside of the lid. The date of the invention of the harpsichord is uncertain. Before the fifteenth century there is no trace of its existence. It was introduced into England early in the seventeenth century. In the eighteenth century Kirkman, and later Broadwood and Tschudi, were the famous makers in London. After the invention of the pianoforte (q.v.) the harpsichord and all instruments of the same kind, such as the spinet, were in time entirely superseded. The harpsichord shown in the accompanying illustration was presented to Nelly Custis by George Washington. It was made in London, is 8 feet long, $3\frac{1}{2}$ feet wide, and has two banks of 120 keys. Consult A. J. Hipkins, *Old Keyboard Instruments* (London, 1887), and F. W. Galpin, *Old English Instruments of Music* (Chicago, 1911).

HARPOT. See KHARPOT.

HARPY (Lat. *harpyia*, from Gk. "ἄρπυια, from the root of ἀρπάειν, *harpazein*, Lat. *rapere*, to snatch). In Greek legend, a personification of the swift destructive wind storm, and hence also a symbol of death, a power carrying mortals off to sudden death. In this character they are found on Lycian graves, monuments, and elsewhere, carrying away the departed. In legend they are the daughters of Thaumias (the personification of the wonders of the sea) and Electra, and sisters of Iris. In Homer there is but one Harpy, *Podarge* (Swift-Foot), who by Zephyrus became mother of the horses of Achilles. In Hesiod two are mentioned Aello ('Ἀελλώ, Storm-Swift) and Okypete ('Οκυπέτη, Swift-Flying); they are winged goddesses, swifter than winds or birds. Later writers mention other names, as Celano, who in Vergil, *Æneid*, iii, is their leader. The later writers also make them loathsome and filthy, bringing pollution to all that they approach. The Harpies appear in the Argonautic legend as sent by the gods to punish the blind Phineus, whose food they carry off. They were pursued by the winged sons of Boreas (Zetes, and Calais) to the Strophades islands in the Aegean, and either killed or, in the usual version, forced to promise to cease harassing Phineus. In the earlier art the Harpies are represented as winged human beings. Later they appear regularly with the head, breasts, and arms of a woman, but the claws, wings, and tail of a bird (so Vergil describes them). This is their form on the celebrated Harpy tomb from Xanthus in the British Museum. The Harpies have been regarded as the hostile spirits of the hot south wind, or as spirits of the storm who, at the order of the gods, carry off human beings alive to the underworld.

HARPY BAT. Two different kinds of bats are called "harpies." One is a genus of fruit bats (*Harpyia*), of which there are two species in the East Indies, one about 4 inches long, and the other much larger. The fur of both is pale buff in color, and both have the nostrils prolonged into divergent tubes, so that the genus is frequently called "tube-nosed." See Plate of BATS.

Another group of "harpy" bats is found in the insect-catching vespertilionine genus *Harpyiocephalus*, which is closely allied to our common North American bats. Though so far removed otherwise, this group agrees with the frugivorous genus (*Harpyia*) above mentioned, in having tubular nostrils—a remarkable similarity in two

so divergent groups. These bats, of several species, inhabit India, the Malayan Archipelago, and Japan, and include one, the white-bellied harpy of the Himalayas, remarkable for its brilliant coloration, the fur being golden orange on the head, varying rust red on the back and outer surface of the membranes, and white on the chin, throat, and abdomen. All have large ears and numerous and very strong teeth, and they are believed to catch and crush beetles as well as to seize smaller insects.

HARPY EAGLE. A huge, crested bird of prey (*Thrasaetus harpyia*), allied to the eagles and found in South and Central America and Mexico, occasionally coming as far north as the Rio Grande valley. See EAGLE, and Plate of EAGLES and HAWKS.

HARPY TOMB. See XANTHUS.

HARQUEBUS, här'kwë-büs. See ARQUEBUS.

HAR/RA DEN, BEATRICE (1804—). An English novelist, born at Ilampstead and educated at Dresden, and in Cheltenham, Queen's, and Bedford colleges, finally taking her degree with honors in classics and mathematics, at the University of London (1833). She traveled on the Continent and in 1894-95 visited the United States. She created a sensation in 1893 by her novel *Ships that Pass in the Night*. Among her other novels are: *In Varying Moods* (1894); *Hilda Stafford* (1897); *The Fowler* (1899); *Katharine Freusham* (1903); *The Scholar's Daughter* (1906); *Interplay* (1908); *Out of the Wreck I Rise* (1912).

HARRAN. See HARAN.

HARRAR, HARAR, hä-rär', or **HURRUR**. The most eastern province of Abyssinia, bounded on the north and east by French Somali Coast and British Somaliland, and on the southeast and south by Italian Somaliland and British East Africa (Map: Africa, J 4). It is a plateau, reaching an altitude of about 11,000 feet. Nearly all the foreign commerce of Abyssinia passes through this province. (See ABYSSINIA.) Capital, Harrar (q.v.). Harrar belonged to the Anglo-Egyptian Sudan before the uprising of the Mahdi. It was ruled by an independent Emir from 1885 till early in 1887, when it was captured by Menelik of Abyssinia, from whom it was taken by the Italians in 1901; it became an Abyssinian province again in 1906, after the Italian defeat at Adowa.

HARRAR. The capital of the Province of Harrar in eastern Abyssinia, 184 miles south of the port Jibuti, with which it is connected by rail (Map: Africa, J 4). It is the second city of the country in importance, is surrounded by walls, and has a palace, one of the usual circular Abyssinian churches, and several mosques and barracks. It is situated in a fertile district which produces principally coffee. The commerce is growing and includes coffee, cotton, gum, ivory, and fruit, while the town itself carries on a lively trade in cattle, camels, and mules. Harrar is connected by telegraph and telephone with Addis Ababa and is the residence of several foreign consuls. Harrar was founded by the Arabs in the seventh century and ruled by native potentates till taken by the Abyssinians in the last decade of the nineteenth century. Its first European visitor was Sir Richard Burton, who went there in 1854. Pop. about 45,000 nearly all Harraris and Abyssinians. See HARRAR (PROVINCE); ABYSSINIA.

HARRARIS, här-rär'üz. The people of Harrar in Abyssinia. They are said to have been

Himyaritic Semites in race and were formerly Christians, speaking a dialect of Geez. Now the population is greatly mixed with Gallas and Somali, both of Hamitic stock. They are nearly all monogamists, allowing the women to go unveiled and relieving them of much hard work.

HARRIER, här'i-ër. See HOUND.

HARRIER (from *harry*, AS. *hergian*, to ravage, from AS. *here*, Goth. *harjis*, OHG. *heri*, *hari*, Ger. *Heer*, army). The English name for the low-flying, meadow-haunting hawks of the subfamily Circinæ, called marsh hawks in the United States. See MARSH HAWK.

HARRIER EAGLE. See EAGLE.

HARRIES, hä'rê-ës, HEINRICH. The author of the Prussian national hymn, "Heil dir im Siegerkranz" (q.v.).

HARRIGAN, EDWARD (1845-1911). An American actor and playwright. He was born in New York City and as a young man had a somewhat desultory career, working as a calker in various cities, till finally, in San Francisco, about 1868 he made his appearance upon the stage. Soon afterward in Chicago with Anthony (Tony) Hart he won his first theatrical success, and in New York a little later his truthful and amusing sketches of local character were promptly appreciated. These sketches gradually developed into plays, interspersed with songs which were set to music by David Braham and have been whistled and sung all over the country. Among the best known of Mr. Harrigan's pieces have been the *Mulligan series*, *McSorley's Infatuation*, *Old Lavender*, *Pete*, *The Major*, *Squatter Sovereignty*, *Reilly and the Four Hundred*, *My Son Dan*, and *Marty Malone*. The partnership of Harrigan and Hart lasted till 1884, after which Mr. Harrigan conducted theatres in New York and made tours in different parts of the country. One of his favorite rôles was that of George Cogswell in *Old Lavender*. For the season of 1903-04 he produced *Under Cover*. Consult McKay and Wingate, *Famous American Actors of To-Day* (New York, 1896).

HARRI-KARRI. See HABA-KIRI.

HARRIMAN. A city in Roane Co., Tenn., 51 miles by rail west of Knoxville, on the Emory River, and on the Harriman and Northeastern, the Louisville and Nashville, the Southern, the Tennessee Central and the Cincinnati, New Orleans, and Texas Pacific railroads (Map: Tennessee, F 3). It is the centre of a region rich in coal, iron, timber, and agricultural lands, and has farm-implement works, a cotton mill, knitting mills, ironworks, a foundry and machine shops, a tannery, a flouring mill, planing mills, a metal-bedstead factory, and other industrial establishments. The city is the seat of the American University, founded in 1893, and of an industrial school for negroes, and contains a Carnegie library. Harriman was founded in 1890, and was granted a special city charter in 1891. The government, as provided by the revised charter of 1899, is vested in a mayor, chosen biennially, and a city council, elected on a general ticket. Harriman owns and operates its water works and electric-light plant. Pop., 1900, 3442; 1910, 3061.

HARRIMAN, EDWARD HENRY (1848-1909). An American railroad magnate and financier, born at Hempstead, N. Y., and educated in the public schools of Jersey City, N. J., and at Trinity School, New York City. When 14 years of age, he entered business as a brokerage clerk in

New York, becoming a member of the Stock Exchange at 22. In 1872 he founded the banking and brokerage firm of Harriman & Co., in 1883 was elected a director of the Illinois Central Railroad, and in 1887-90, as vice president of this road, first demonstrated his genius in railroad matters. In 1897-98, having gained control of the Union Pacific, with the aid of Kuhn, Loeb & Co., he proceeded to increase the road's efficiency greatly; and in order to extend it and prevent competition, he bought up the Central and Southern Pacific railways and the Oregon Railroad and Navigation Company, thus giving him an unobstructed path from Chicago to the Pacific coast. His unsuccessful attempt to wrest control of the Northern Pacific from J. J. Hill resulted in a serious Stock Exchange panic in May, 1901. Part of the funds used in this fight had been obtained by Harriman from the Equitable Life Assurance Society, of which he was a trustee: later his attempt to dominate the Equitable was thwarted by Thomas F. Ryan. Harriman's methods of financing were perhaps best illustrated after he had come into control of the Chicago and Alton Railroad in 1901; \$8,000,000 of old bonds and \$22,000,000 of old stocks were converted into \$54,000,000 of new bonds and \$40,000,000 of new stocks: a 30 per cent dividend was declared soon after reorganization, and the bonds were taken by Harriman and others at 65 per cent and sold to insurance companies and savings banks at 96, thereby later causing the wreck of many of the smaller institutions. In 1906 the Interstate Commerce Commission began an investigation of the Harriman line, the only practical result of which, aside from educating the public, was to demonstrate Harriman's well-nigh absolute power in the railroad world. His last great fight was in 1907, when he ousted his former friend, Stuyvesant Fish, from the presidency of the Illinois Central. In the field of politics Harriman used his influence freely in the affairs of California, and he contributed \$225,000 for the Roosevelt campaign of 1904; but later, during an exchange of letters with President Roosevelt, he was referred to by the latter as "an undesirable citizen." At the time of his death Harriman controlled the Union Pacific, the Southern Pacific, the Southern Pacific and Mexico, the St. Joseph and Grand Island, the Illinois Central, the Central of Georgia, the Pacific Mail Steamship Company, the Portland and Asiatic Steamship Company, and the Wells Fargo Express Company. His great estate, estimates of which ranged from \$200,000,000 to \$600,000,000, was left entirely to his wife.

HARRINGTON, BERNARD JAMES (1848-1907). A Canadian educator, born at St. Andrew's, Province of Quebec, and educated at McGill and Yale universities, where he won high honors in natural science. Actively identified with the development of applied science courses at McGill, he was lecturer in chemistry and also chemist and mineralogist to the Geological Survey of Canada (1871-78); became (1883) Greenshields professor of chemistry and mineralogy, also lecturing on mining and metallurgy until 1891; and later was director of the Macdonald chemistry and mining building and Macdonald professor of chemistry. He was president of the Natural History Society of Montreal; for many years edited the *Canadian Naturalist*, later called the *Canadian Record of Science*; was elected fellow of the Royal So-

ciety of Canada and of the Geological Society of London; and in 1897 was vice president of the chemistry section at the Toronto meeting of the British Association for the Advancement of Science. His publications include *Notes on Dawsonite, a New Carbonate* (1882); *Life of Sir William Logan* (1883); *Notes on the Iron Ores of Canada and their Development* (1884); *Minerals of Some of the Apatite-Bearing Veins of Ottawa County, P. Q.* (1886); *The Sap of the Ash-Leaved Maple* (1887); *George Mercer Dawson* (1902).

HARRINGTON, CHARLES (1856-1908). An American educator and sanitarian, born at Salem, Mass. He studied at Bowdoin College (1873-74), graduated from Harvard University in 1878 and from Harvard Medical School in 1881, and studied for two years at Leipzig, Strassburg, and Munich. He was assistant in chemistry in 1883, assistant professor from 1893 to 1906, and for the last two years of his life professor of hygiene, at Harvard. From 1889 to 1904 he had charge of the bureau of milk inspection of the Boston Board of Health. In 1904 he became Secretary of the Massachusetts State Board of Health. For several years he was on the staff of the *Boston Medical and Surgical Journal*. He is author of the textbook *A Manual of Practical Hygiene for Students, Physicians, and Medical Officers* (1901; 3d ed., 1905).

HARRINGTON, JAMES (1611-77). An English poetical writer, born at Upton, Northamptonshire. He entered Trinity College, Oxford (1629), but left without a degree and traveled on the Continent. Although a Republican, he was attached to King Charles I, whom, it is said, he accompanied to the scaffold. Resuming his earlier studies, he published in 1656 his famous political romance, *The Commonwealth of Oceana* (i.e., England). Harrington's main principle is that power rests upon property, especially landed property. He further argues that rulers should be elected by ballot for terms of three years. The work led to a lively controversy, in which Harrington took an active part. After the Restoration he was committed to the Tower on the charge of conspiracy. Weakened in mind by his imprisonment, he died insane, Sept. 11, 1677. His *Works* were edited by Toland (1700). Consult *Oceana*, in Morley's "Universal Library" (London, 1887), and Dwight, in the *Political Science Quarterly* for 1887.

HARRINGTON, MARK WALROD (1848-). An American astronomer and educator. He was born at Sycamore, Ill., was educated at Evanston, Ill., graduated at the University of Michigan in 1868, and was a member of the faculty there from 1868 to 1876, with an interval in 1870-71, when, as a member of the United States Coast and Geodetic Survey, he visited Alaska. He studied at the University of Leipzig in 1876-77, and in the latter year proceeded to China as professor of astronomy in the Cadet School of the Tsung-li-Yamen, or Foreign Office, in Peking. Ill health caused his return to the United States in 1878, and for a year he was professor in the Louisiana State University. In 1879 he was appointed professor of astronomy and director of the observatory at his alma mater, a position he held until 1891, when he was appointed Chief of the United States Weather Bureau at Washington. He resigned in 1895 to become president of Washington

State University. In 1897 he retired to private life. He is the author of numerous scientific articles, pamphlets, and works, and until 1892 was editor of the *American Meteorological Journal*, which he founded in 1884. He wrote *About the Weather* (1899; 2d ed., 1909).

HAR/RIOT, or HARIOT, THOMAS (1500-1621). An English astronomer and mathematician, born at Oxford. He acted for some time as tutor to Sir Walter Raleigh, who in 1585 appointed him surveyor to Grenville's expedition to Virginia. Harriot published an account of this expedition in 1588, and the work was afterward reprinted in Hakluyt's *Voyages*. On his return to England, after an absence of two years, he resumed his mathematical studies with zeal and success, but ill health prevented him from publishing his mathematical discoveries. He had an undoubted genius for algebra, as is shown by his *Artis Analyticae Praxis ad Aequationes Algebraicas Novæ Methodo Resolvendas* (London, 1631). In this treatise Harriot did for algebra in England what his friend Vieta had done in France—he put it on its modern basis. In the matter of symbolism he added the signs $>$ and $<$ to those which were just coming to be recognized as part of the universal language of algebra. He asserted the advantage, now fully recognized, of making the second member of an equation zero, although he did this only for particular cases, and he gave in substance the general theorem (often called by D'Alembert's name) that an equation of the n th degree has exactly n roots. Consult *Harriot Papers*, edited by Rigaud (Oxford, 1831). For his life, consult Stevens, *Thomas Harriot, the Mathematician, the Philosopher, and the Scholar* (London, 1909), and *Briefe and True Report of the New Found Land of Virginia* (facsimile, New York, 1903).

HARRIOTT, MRS. F. C. See MORRIS, CLARA.

HARRIS, ABRAM WINEGARDNER (1858-). An American university president, born in Philadelphia. He graduated in 1880 (A.M., 1883) from Wesleyan University, where he was tutor in mathematics and registrar in 1881-84 and instructor in history in 1885-88. He taught mathematics at Dickinson Seminary, Williamsport, Pa., in 1880-81; was assistant director in 1888-91 and director in 1891-93 of the Office of Experiment Stations of the United States Department of Agriculture, and had charge of the Jacob Tome Institute, at Port Deposit, Md., in 1901-06. From 1893 to 1901 he served as president of the University of Maine, and after 1906 as president of Northwestern University. In 1910 he became chairman of the executive board of the Religious Education Association.

HARRIS, SIR AUGUSTUS HENRY GLOSSOP (1852-96). A noted English theatrical manager, lessee of Drury Lane, Covent Garden (the Opera), and other theatres. He was the son of Augustus Glossop Harris, who was also a well-known manager, and was born in Paris. In 1873 he made his début as an actor at Manchester and not long afterward became stage manager at Covent Garden. He leased Drury Lane in 1879. Besides his subsequent productions, especially of melodrama and opera, both there and at Covent Garden, which he took in 1888, he became joint author of a number of plays, most frequently in collaboration with Henry Pettitt; among them were *Pluck* (1882); *A Run of Luck* (1886); *A Million of Money* (1890); *The Prodigal Daughter* (1892). He was a member of the London County Council

and was sheriff in 1891, when he was knighted. His death, which was ascribed to overwork, occurred at Folkestone.

HARRIS, CHAPIN A. (1806-60). An American dentist, born at Pompey, N. Y. In 1839 he procured the charter for the Baltimore Dental College, the first separate school of dentistry ever founded, and in 1839 established the *American Journal of Dental Science*, which he edited until 1858. Harris wrote: *Principles and Practice of Dental Surgery* (1839); *Diseases of the Maxillary Sinus* (1842); and a *Dictionary of Dental Science* (1849).

HARRIS, CORRA MAY (WHITE) (1869-). An American writer. She was born at Farm Hill, Ga., was educated at home, and married the Rev. Lundy Howard Harris (died 1910) in 1887. She began writing for the *Independent* in 1899 and contributed the "Brass-town Valley Stories" to the *American Magazine* in 1905-09. She also wrote: *The Jessica Letters* (1904), in collaboration with Paul Elmer More; *A Circuit Rider's Wife* (1910); *Eve's Second Husband* (1910); *The Recording Angel* (1912); *In Search of a Husband* (1913).

HARRIS, DAVID FRASER (1867-). A Canadian physiologist, born in Edinburgh and educated at Edinburgh and Glasgow universities, where he won high honors in physics and physiology. He was assistant in physics and demonstrator in physiology at Glasgow (1893-98), lecturer in physiology at St. Andrews (1898-1908) and at the University of Birmingham, Thomson lecturer in natural science at the United Free Church College (1911), and after 1911 professor of physiology at Dalhousie University, Halifax, Nova Scotia. He was elected fellow of the Royal Society, Edinburgh, in 1908-09 was president of the Scottish Microscopical Society, was made a member of the council of the Nova Scotia Institute of Science, and in 1912 was appointed university representative on the Medical Council of Canada. His principal publications are: *The Time-Relations of the Voluntary Tetanus in Man* (1894); *The Reducing Power of Animal Tissues* (1907); *The Functional Inertia of Living Matter* (1908); *Colored Thinking* (1908); *Harvey as Histologist* (1909); *National Degeneration* (1909); *Sleep* (1910); *Plague* (1911); *Studies in the Reductose of Liver and Kidney* (1912); *Consciousness as a Cause of Neural Activity* (1913).

HARRIS, FRANK (1850-). An English author and editor, educated at American and German universities. He taught, and practiced law, in the Middle West of the United States, and subsequently, returning to England, edited for a time, and successively, the *Fortnightly Review*, the *Saturday Review*, and the *Candid Friend*. He was credited with "discovering" Bernard Shaw and Max Beerbohm and turning the latter from musical to dramatic criticism. From 1871 to 1878 he lived in the United States and in 1913 returned there to lecture. His short stories are strong, impressive, and carefully constructed; their vigor, directness, and wide removal from popularity and conventionality of motive, sentiment, and point of view, give them, with their ironic and sardonic tendency, a genuine distinction. His short stories include: *Elder Conklin* (1894); *Montes the Matador* (1910); and *Unpath'd Waters* (1913). In 1885-86 Harris's careful investigation of the Chicago labor troubles (which culminated in the Haymarket Square

Riot, q.v.) led him to a belief in the innocence of all but one of the Socialists executed as participants in a conspiracy; his vivid and impassioned realistic novel, *The Bomb* (1908), presents in the form of fiction a transcript of this tragic occurrence. In 1909 appeared his *The Man Shakespeare*, in 1911 *The Women of Shakespeare*. Both these books are valued by scholars as discriminating appreciations of aspects of Shakespeare's art, though distrusted in their specific contentions, notably in the attempt of the latter work to identify Shakespeare's mother, wife, daughter, and mistress as direct prototypes of various women of the plays of the great dramatist. In addition to the works above named should be mentioned *Great Days* (1914), a novel, and the plays *Mr. and Mrs. Daventry* (1900) and *Shakespeare and his Love* (1910).

HARRIS, LORD GEORGE (1746-1829). An English soldier. Born at Brasted, Kent, he was educated at Westminster School and at the Woolwich Military Academy. By 1765 he was lieutenant in an artillery regiment and in 1774 went as a captain to America, where he fought at Lexington, Bunker Hill, and in many other battles of the Revolutionary War up to 1778, when he went to the West Indies. He had suffered from serious wounds, capture by the French, and shipwreck before he entered on the second stage of his career, which was in India (1790-1800). There he distinguished himself in the campaigns against Tippu Sahib, commanded Fort William as major general, and was both civil and military governor of Madras. For his victory at Seringapatam, ending in the conquest of Mysore, Harris was promoted to be lieutenant general (1801). He was made general (1812) and a peer of the realm (1815), under the title Baron Harris of Seringapatam and Mysore. In 1824 he was made governor of Dumbarton Castle on the Clyde.

The fourth **BARON HARRIS** (GEORGE ROBERT CANNING HARRIS) (1851-), who succeeded to the family title in 1872, was educated at Eton and at Christ Church, Oxford, and became known throughout the Empire as a cricketer. In 1885-86 he was Undersecretary of State for India, in 1886-89 Undersecretary of State for War, and from 1890 to 1905 Governor of Bombay.

HARRIS, GEORGE (1844-1922). An American college president. He was born at East Machias, Me., and graduated from Amherst College in 1866 and from Andover Theological Seminary in 1869. He served as pastor of the High Street Church, Auburn, Me., in 1869-72, and of the Central Church at Providence, R. I., in 1872-83. From 1883 to 1899 he was professor of Christian theology at Andover Theological Seminary and from 1899 to 1911 president of Amherst College. He is author of *Moral Evolution* (1896), *Inequality and Progress* (1897), and in 1884-93 was one of the editors of the *Andover Review*.

HARRIS, GEORGE WASHINGTON (1814-69). An American humorist, born at Allegheny City, Pa. He was a jeweler's apprentice and afterward captain of a Tennessee River steamboat, then a political writer for newspapers, and finally the creator of "Sut Lovengood," whose sketches and stories, written originally for newspapers (1858-61), appeared in book form as *Sut Lovengood's Yarns* (1867)—one of the raciest of Southwestern books of humor, ranking with J. J. Hooper's *Simon Suggs*.

HARRIS, GILBERT DENNISON (1864-).

An American geologist. He was born at Jamestown, N. Y., and graduated from Cornell University in 1886. Between 1887 and 1893 he served on the United States, Texas, and Arkansas geological surveys, and he was assistant professor of paleontology and stratigraphic geology at Cornell from 1894 to 1909, and afterward full professor. He was also State geologist of Louisiana in 1899-1909. In 1895 he became proprietor and editor of the *Bulletins of American Paleontology*, and he published a reprint of Conrad's *Fossil Shells of the Tertiary Formations of the United States*. His investigations deal especially with the paleontology and stratigraphy of the Gulf Tertiaries and with the oil and gas of Louisiana.

HARRIS, HOWEL (1714-73). The principal founder of Welsh Calvinistic Methodism. He was born at Trevecca in Wales, was brought up in the Established church, and matriculated at Oxford in 1735. He was endowed with high oratorical powers, and his energy and enthusiasm carried his audiences by storm. He founded no fewer than 300 societies and formed a sort of Protestant monastery, in which there lived about 120 persons. Both Wesley and Whitefield were his friends and preaching companions. He raised a regiment at the time when a French invasion of England was confidently expected and moved about with his men, preaching in every encampment. His *Autobiography* was published in 1791. He also wrote *The Last Message and Testimony of Howel Harris, Esq., late of Trevecca in Wales, Found among Some of his Papers* (1774), and other works in Welsh. Consult David Young, *The Origin and History of Methodism in Wales and the Borders* (London, 1893).

HARRIS, ISHAM GREEN (1818-07). An American politician, born near Tullahoma, Tenn. After a very limited common-school education he engaged in business, studied law at night, and was admitted to the bar in 1841. He served in the State Legislature in 1847, was a Democratic member of the House of Representatives from 1849 to 1853, was elected Governor of Tennessee in 1857, and was reelected in 1859 and 1861. At a special meeting of the State Legislature, called in January, 1861, to consider the condition of the country, he recommended that the question of calling a convention to take action for or against the secession of Tennessee be submitted to a popular vote, and asserted that in his view the existing evils could best be remedied by the adoption of amendments to the Federal Constitution favorable to slavery; and after the people decided on February 9 both in favor of the Union and against the calling of a convention, the secession majority in the Legislature on May 1 authorized him to enter into a military league with the Confederate States, to raise troops for State defense and to issue State bonds. On May 7 the League, which had previously been negotiated, was formally ratified by the Legislature. At the election held in June a large majority of the people voted in favor of secession and the representation of the State in the Confederate Congress, eastern Tennessee, however, remaining steadfastly loyal. In connection with the election charges of corruption and fraud were brought by the loyalist minority against the Governor and his friends. The Federal generals Grant and Buell soon gained virtual control of the State, Buell occupying Nashville with a considerable force, and in March, 1862, Harris

fled to Mississippi. Soon afterward he joined the Confederate army and served as aid successively to Gen. A. S. Johnston, who died in his arms at the battle of Shiloh, and to other Confederate generals in command of the Army of the West. On March 3, 1862, President Lincoln appointed Andrew Johnson military governor of Tennessee, and Harris played no further part of any consequence in State affairs during the progress of the war. After the war he lived first in Mexico and then in England, but returned to Memphis in 1867, speedily regained his control of State politics, and was elected to the United States Senate in 1876, 1882, 1888, and 1894, where he was distinguished for his great powers as a debater. He served on important committees, acted as chairman of the Committee on the District of Columbia, and in 1893 was elected President pro tem.

HARRIS, JAMES (1709-80). An English philologist and classical scholar, born at Salisbury. He was educated at Wadham College, Oxford, and studied law at Lincoln's Inn, although he never intended to practice that profession. From his father, who died in 1734, he received an inheritance sufficient to enable him to devote himself henceforth to study. Harris's interests were mainly in the classics and especially in Aristotle's philosophy. He also took an active part in political life, serving first as a magistrate for his county, and then from 1761 until his death as the member for Christchurch in the House of Commons. In 1763 he was appointed Lord of the Admiralty and after three months Lord of the Treasury. Eleven years later he became secretary and comptroller to the Queen. The works of Harris, which are now of historical interest merely, are a collection of three treatises—one on art, a second on music, painting, and poetry, and a third on happiness (5th ed., 1794); *Philosophical Arrangements* (1775), dealing with the Aristotelian philosophy; *Philosophical Inquiries* (1781), on style and literary criticism; and the book for which he is chiefly remembered, *Hermes, or a Philosophical Inquiry Concerning Universal Grammar* (1751), an attempt to force language into the forms of logic. He has also been supposed to be the author of *Spring, a Pastoral*, which was produced at Drury Lane in 1762. In 1801 his son, James Harris, first Lord Malmesbury, published a collection of his father's works in two volumes, with a biographical sketch.

HARRIS, JAMES. An English diplomat. See MALMESBURY, JAMES HARRIS, first EARL OF.

HARRIS, JAMES RENDIE (?-). An English philologist, paleographer, and biblical scholar. He studied at Clare College, Cambridge, and was its fellow and librarian. He held professorships at Johns Hopkins University (1882-85) and Haverford College (1886-92), and later was university lecturer in paleography at Cambridge University (1893-1903), and professor of theology in the University of Leyden (1903-04). In 1910 he was Haskell lecturer at Oberlin College. He traveled extensively in the East in search of manuscripts. Honorary degrees were conferred upon him by a number of English and other universities. Among his writings are: *The Teaching of the Apostles and the Sibylline Books* (1885); *The Teachings of the Apostles* (1887); *The Rest of the Words of Baruch* (1889); *The Diatessaron* (1890); *The Acts of Perpetua* (1890); *The Apology of Aristides* (1891); *Oodem Sangallensis* (1891);

Popular Account of the Newly Recovered Gospel of St. Peter (1892); *Fragments of Ephrem Syrus* (1895); *Hermas in Arcadia* (1896); *Letters from Armenia* (1897); *Homeric Centones* (1898); *The Gospel of the Twelve Apostles*; *The Annotators of the Codex Bezae* (1901); *Sidelights on New Testament Researches* (1909); *The Odes and Psalms of Solomon* (1910).

HARRIS, JOEL CHANDLER (1848-1908). An American writer of fiction, and journalist, born at Eatonton, Ga., Dec. 8, 1848. His first occupation was that of a printer's apprentice, and he worked on a local weekly, *The Country Man*. He studied law, and practiced at Forsyth, Ga., but also did editorial work, and in 1876 joined the staff of the *Atlanta Constitution*, of which he became editor in 1890. It was to this paper that he contributed the very successful studies of Afro-American folklore, collected in 1880 as *Uncle Remus, his Songs and his Sayings*, a volume which has become a classic of its kind, since it appeals alike to scientific students of popular tradition and to the general public; old and young. He continued with other sketches, such as *Nights with Uncle Remus* (1883); *Mingo and Other Sketches* (1884); *Free Joe and Other Georgian Sketches* (1887); *Daddy Jake the Runaway and Short Stories* (1899); *Chronicles of Aunt Minerva Ann* (1899); *Balaam and his Master* (1901); *Tales of the Homefolks in Peace and War* (1898); *Gabriel Tolliver* (1902); *The Tar-Baby and other Rhymes* (1904); *Wally Wanderson and his Story-Telling Machine* (1903); *Told by Uncle Remus: New Series* (1905)—weaving into fiction frequent touches of folklore, as do the juveniles *Little Mister Thimblefinger* (1894), *Arvon in the Wildwoods* (1897), and several other volumes. Mr. Harris also made a memoir of Henry W. Grady (1890) and contributed to the history of his State a volume on *Georgia from the Invasion of De Soto to Recent Times* (1899). No one has more successfully portrayed the humorous side of negro character and imagination; he has also given an admirable picture of Georgia life in general. He was a member of the American Academy of Arts and Letters. On July 3, 1908, he died at Atlanta.

HARRIS, JOSEPH. An English actor. His first recorded appearance was as Alphonso in *The Siege of Rhodes* (1681), written by Sir William Davenant, to whose company he belonged. He also played Shakespearean rôles in the same cast as Betterton and was said to be nearly as clever in the creation of character as this actor, and quite as versatile, his range extending from Romeo to Sir Frederick Frolic in *Love in a Tub*. He is mentioned in Pepys's *Diary* as a very airy gentleman, and it is also on record that he maimed a brother actor for life by fencing without a button on his foil.

HARRIS, JOSEPH (1828-92). An agricultural writer. He was born at Shawbury, England. He undertook the study of agricultural chemistry, which he pursued with Lawes and Gilbert at Rothamsted, and which formed the basis of many of his writings. At the age of 21 he came to America and in 1864 began writing for the agricultural press. He continued his work along these lines and in 1884 began a comprehensive series of articles, 171 in all, entitled "Walks and Talks on the Farm," the first of which appeared in the *Genesee Farmer*, of which he was editor, and the remainder in the *American Agriculturist*, to which the *Genesee*

Farmer had been sold. Perhaps none of his other writings exercised so wide an influence in paving the way for improved farming and earned for him so high a place in American agriculture. They are actual talks with a neighbor and not, as many suppose, with an imaginary person. Among his other writings may be mentioned his books: *Harris on the Pig* (1888); *Talks on Manures* (1883); *Gardening for Young and Old* (1892).

HARRIS, MERRIMAN COLBERT (1846-1921). An American Methodist Episcopal bishop, born at Beallsville, Ohio. He served three years in the Twelfth Ohio Cavalry during the Civil War, and entered the ministry in 1869. In 1873 he graduated from Allegheny College and was immediately sent as a missionary to Japan. From 1886 to 1904, while superintendent of the Japanese mission at San Francisco, he established missions on the Pacific coast and in Hawaii. In 1904 he was elected Missionary Bishop of Japan and Korea. He became a member of the Royal Asiatic Society and the Japan Society of London, was twice decorated by the Emperor of Japan, receiving the third-class Order of the Sacred Treasure, and is the author of *Christianity in Japan* (1907).

HARRIS, Mrs. A mythical personage, frequently mentioned in Dickens's *Martin Chuzzlewit*, by Sairey Gamp (q.v.).

HARRIS, ROBERT (1849-1919). A Canadian genre and portrait painter. He was born in the Vale of Conway, North Wales, but came early with his parents to Charlottetown, Prince Edward Island. He was educated at the Prince of Wales School, Charlottetown, was for a time a provincial land surveyor, and practiced as a self-taught painter. He then studied with Legros in the Slade Arts School, London, and under Bonnat in Paris, and traveled in Italy, Holland, and Belgium. Returning to Canada, he first established himself at Toronto, but soon removed to Montreal. He was director of the art school of Montreal (1883-87), and original member of the Royal Canadian Academy (1884) and its president (1893-96); was created C.M.G. (1902); received gold medals at the Pan-American Exposition, Buffalo, 1901, and the World's Fair, St. Louis, 1904. His genre paintings treat subjects of Canadian life; the best known are "The School Trustees" (National Gallery, Ottawa) and "The Fathers of the Confederation" (1883), a commission of the Canadian government, now in the Parliament Building, Ottawa. Most of his works, however, are portraits. In the Montreal Museum are "A Man of Small Importance" and portraits of a superior of the Order of Jesuits, the Rev. Mr. Morman, and Lady Minto.

HARRIS, ROBERT CARR (1843-). A Canadian civil engineer and educator, born in London, England, and educated there at King's College. Having begun practice in 1864, he was assistant engineer during construction of the Intercolonial Railway (1867-72), and assistant district engineer (1872-75), and in 1875-76 was division engineer of the Canadian Pacific Railway and of the Quebec Government Railway. His work on the Canadian Pacific included the calculating of bridge superstructure trusses and the inspection of bridges from the Rocky Mountains to Vancouver, British Columbia. In 1879-97 Harris was professor of civil engineering in the Royal Military College, Kingston, in 1898-1901 professor of general engineering in the School of Mines in that city,

in 1902-04 chief engineer of trial and location surveys on the Brockville and Sault Ste. Marie Railway, in 1906-09 division engineer of the Canadian Pacific Railway, Guelph and Goderich location and construction; and in 1910 he had charge of mining surveys in northern New Brunswick. He was elected an associate of the Institute of Civil Engineers, London, England. His publications include: *A Textbook of Civil Engineering*; *A Textbook on Bridge Calculations*; *Sanitary Engineering*; *Reclamation of Tidal Marshes from the Sea*.

HARRIS, SAMUEL (1814-99). An American Congregational theologian, born in East Machias, Me. He graduated at Bowdoin College in 1836 and at Andover Theological Seminary three years later. He taught, and occupied Congregational pulpits until 1855, when he was chosen professor of systematic theology in the Bangor Seminary. He was president of Bowdoin from 1867 to 1871, when he became professor of systematic theology in Yale Divinity School. Among his publications the most important are: *Kingdom of Christ on Earth* (1874); *The Philosophical Basis of Theism* (1883); *The Self-Revelation of God* (1887); *God, Creator and Lord of All* (1897).

HARRIS, THADDEUS WILLIAM (1795-1856). An American entomologist, born at Dorchester, Mass. He graduated at Harvard in 1815 and became a practicing physician, but devoted a great part of his time to the study of natural history. In 1831 he became librarian of Harvard. He was a member of the State Commission appointed in 1837 to make a botanical and zoölogical survey of Massachusetts and devoted himself particularly to the preparation of a *Systematic Catalogue of the Insects of Massachusetts*. He founded the Harvard Students' Natural History Society and the Massachusetts Horticultural Society and published a valuable report on *Insects Injurious to Vegetation* (1841; new ed., 1852). He took a deep interest in antiquarian research, and published more than 50 papers on this subject.

HARRIS, THOMAS LAKE (1823-1906). An American spiritualist, born at Fenny Stratford, England. In 1827 his parents settled in Utica, N. Y. His father failed in business, and the son began to write for the press at an early age. He became a Universalist preacher at Minden, N. Y., in 1844. Soon afterward he organized a "Christian Society" in New York and then embraced spiritualism and joined a community at Mountain Cove, Va. From the common spiritualistic doctrine he soon broke away and in 1861 organized a community, which was settled successively at Amenia and Brocton, N. Y., and then at Santa Rosa, Cal. A part of his following, under the leadership of Laurence Oliphant, broke away from him and, charging him with robbery, they recovered several thousand dollars through the courts. He wrote: *Truth and Light in Jesus* (1860); *The Millennial Age* (1861); and an historical sketch, *The Trent Affair* (1896). On his *Brotherhood of the New Life*, consult Allen, T. L. Harris, *the Seer* (London, 1897).

HARRIS, TOWNSEND (1804-78). The first representative of the United States in Japan. He was born at Sandy Hill, N. Y. Educated at home, he moved at the age of 14 to New York City and entered upon a business life as a leather merchant. He was strict and diligent in self-culture and much interested in popular

education. While serving two terms as president of the Board of Education, he succeeded in spite of much opposition in getting established the New York Free Academy, now the College of the City of New York. In 1848 he projected and entered upon a trading and exploring voyage on the Pacific, and during the five years spent in it he gained much information in regard to Orientals and their ways. He served as Consul at Ningpo in 1854, and in 1855, on the nomination of William H. Seward and Commodore Perry, he was appointed by President Pierce to be the first Consul General to Japan, in accordance with the provisions of the treaty which Commodore Perry had made with the Shogun's government in 1854. On his way out he negotiated a treaty with Siam. On Sept. 4, 1856, he raised at Shimoda the United States consular flag—the first foreign flag to float over any part of Japan. Refusing to deliver the letter of the President of the United States to the Shogun, except in personal audience, he succeeded, after 18 months' parleying, and entering Yedo Nov. 30, 1857, he had audience with the Shogun in his palace on December 7. The next four months were spent in treaty negotiations, and after much opposition and many delays he secured the signature of Premier Ii to a treaty which became the model for 20 subsequent treaties between Japan and other nations. On July 7 he was made Minister Resident and at once established his legation at Yedo. Resigning office Oct. 21, 1861, he returned to New York and was active in many societies until his death there.

Consult: Griggs, *The First American Envoy to Japan* (Boston, 1895); Satow, *Agitated Japan* (London, 1896); Nitobé, *The Japanese Nation* (New York, 1912).

HARRIS, VICTOR (1869-). An American song composer, born in New York. He was a pupil of Charles Blum, William Courtney, F. K. Schilling, and Anton Seidl. He was a successful organist and from 1889 to 1895 held important appointments in Tuxedo Park, Brooklyn, and New York. He was for three years a teacher and coach at the Metropolitan Opera, New York; for one season was conductor of the Utica Choral Union and served as assistant conductor under Seidl at the Brighton Beach summer concerts (1895-96). He afterward took up his residence in New York and established himself as a vocal instructor and composer. He published compositions for piano, organ, and chorus, but is principally known for his songs.

HARRIS, WILLIAM LAUREL (1870-). An American mural painter, born in Brooklyn, N. Y. He studied under T. W. Dewing in New York City, and under Gérôme, Galland, Lefebvre, and Doucet in Paris. After his return to America he assisted in the decorations of the Library of Congress and of St. Bartholomew's Church, New York. His chief independent work (for ecclesiastical institutions) is in a style recalling the great religious painting of early times, yet it is modern in its realistic conception. Among such works are: "St. Francis de Sales before Pope Clement VIII" (Catholic University, Washington); "The Holy Sacrifice" and "Our Lady of the Lake" (St. Mary's, Lake George, N. Y.); and the design for the tapestry back of the Cardinal's throne in St. Patrick's Cathedral, New York. By far his most important achievement is the great decorative

scheme for the church of the Paulist Fathers, New York City, upon which he was still engaged in 1914, and which comprises a large "Crucifixion" and 30 other mural paintings. Harris became a member of the Architectural League and was secretary of the Society of Mural Painters (after 1909) and president of the Municipal Art Society, New York (after 1912).

HARRIS, WILLIAM LOGAN (1817-87). An American Methodist Episcopal bishop, born in Mansfield, Ohio. In 1837 he entered the ministry, but for some years he was engaged in educational work, from 1851 to 1860 as professor of chemistry and natural history in Ohio Wesleyan University. In 1860 he became one of the secretaries of the missionary society of his church, he was secretary of the general conferences of 1856, 1860, 1864, 1868, and 1872, and in 1872 he was elected Bishop. His writings include: *The Constitutional Powers of the General Conference* (1860); *Eccelesiastical Law and Rules of Evidence* (1885), with William J. Henry; *The Relations of the Episcopacy to the General Conference* (1888). He edited Bishop Baker's *Guide Book in the Administration of the Discipline of the Methodist Episcopal Church* (1873).

HARRIS, SIR WILLIAM SNOW (1791-1867). An English electrician, born at Plymouth and educated at Edinburgh. He practiced medicine for a few years, but after his marriage, in 1824, devoted himself to electricity. His system of lightning conductors for ships, patented in 1820, was introduced in the British navy after more than 20 years' consideration. He was knighted in 1847 and in 1860 was made government referee on electrical cases. Besides many publications on his method of fixed conductors, Harris wrote the excellent handbooks, *Electricity* (1848), *Magnetism* (1850-52), and *Galvanism* (1856); and a *Treatise on Frictional Electricity*, edited, with a biographical memoir, by Tomlinson (1867).

HARRIS, WILLIAM TORREY (1835-1900). An American educator and philosopher. He was born at Killingly, Conn., and was educated at Phillips Andover Academy and at Yale College. From 1857 to 1867 he was assistant superintendent of the St. Louis public schools and from 1867 to 1888 superintendent. In 1867 he established and became editor of the *Journal of Speculative Philosophy*, the first periodical of its kind in the English language. He was received with distinction at the Paris Exposition of 1878, represented the United States Bureau of Education at the Brussels Educational Conference in 1880, and at the Paris Exposition of 1889, where he received from the French government the honorary title *Officier de l'Instruction Publique*, and from 1889 to 1906 he served as United States Commissioner of Education. As Commissioner, he rendered eminent service in formulating a statement of American educational theories and in giving practical definition to pedagogic principles. He was the founder of the St. Louis Philosophical Society and in 1875 was president of the National Education Association. A prominent member of the Concord School of Philosophy, his writings stamp him as one of the clearest expositors in America of German philosophical thought; he was an enthusiastic Hegelian and did more, perhaps, than any one else to make Hegelianism influential in American philosophy. He was chief editor of the "Appleton School Readers"; editor of the department of philosophy in *Johnson's*

Encyclopædia; and editor in chief of the edition of *Webster's New International Dictionary*, published just prior to his death. He received the degree of LL.D. from various American and foreign universities. Besides voluminous reports on educational matters, many papers contributed to the *Proceedings of the American Social Science Association*, and various compilations edited by him, his publications include: *Introduction to the Study of Philosophy* (1889); *The Spiritual Sense of Dante's Divina Commedia* (1889); *Hegel's Logic: A Critical Exposition* (1890); *Psychologic Foundations of Education* (1893); *Elementary Education* (1900; 2d ed., 1904); *The School City* (1906).

HARRIS BUCK. The sable antelope (q.v.), so called because discovered by Sir W. C. Harris, author of *Portraits of the Game and Wild Animals of Southern Africa*, issued in London in 1840 as a magnificent folio book, with colored plates.

HARRISBURG. A city and the county seat of Saline Co., Ill., 70 miles northeast of Cairo, on the Cleveland, Cincinnati, Chicago, and St. Louis and the Southern Illinois Railway and Power Company railroads (Map: Illinois, G 10). It is surrounded by an agricultural district in which are valuable deposits of coal and has flour and saw mills, brickworks, large coal operators, carriage and wagon shops, etc. The city contains a Carnegie library and fine post-office building. Harrisburg adopted the commission form of government in 1913. Pop., 1900, 2202; 1910, 5309.

HARRISBURG. A city, the capital of Pennsylvania, and the county seat of Dauphin County, 105 miles west by north of Philadelphia, on the Susquehanna River, and the Pennsylvania, the Philadelphia and Reading, and the Cumberland Valley railroads (Map: Pennsylvania, H 7). The river, almost a mile wide at this point, is spanned by four bridges, including two iron and steel railroad bridges and a new steel and concrete driving bridge which replaced the historic Old Camel-Back Bridge. The city has a picturesque location, and there are a number of notable structures. The State buildings are in a beautiful park of 55 acres, the Capitol occupying a conspicuous site. The Capitol building, replacing the one destroyed by fire in 1897, is built of brick and steel, veneered with granite on the outside, and the interior finished in marble, and profusely decorated, the estimated cost being \$10,500,000. The State library, founded in 1796, contains more than 170,000 volumes. In Capitol Park is a monument to the soldiers who fell in the Mexican War, and also, on the west side of the Capitol, a statue of Gen. John F. Hartranft. The Dauphin County Soldiers' Monument, a shaft 110 feet high, in honor of the soldiers of the county who died in the Civil War, stands in State Street. Other noteworthy features are the courthouse, Governor's residence, State arsenal, State insane hospital, county prison, technical and classical high schools, city hospital, Home for the Friendless, and the Children's Industrial Home. Harrisburg is the seat of a Roman Catholic bishop.

Owing to its excellent transportation facilities, Harrisburg occupies a position of considerable importance in the industrial and commercial world. There are extensive iron and coal mines in the vicinity; and the city's iron and steel interests are worthy of particular mention. There are roundhouses and repair shops

of the Pennsylvania Railroad; also foundries and machine shops, tin mills, rolling mills, nail works, furnaces, typewriter works, boot and shoe factories, breweries, pipe-bending works, and extensive manufactures of beds and mattresses, women's hats, clothing, silk goods, carriages and wagons, flour, brooms, brick and tile, galvanized iron cornices, marbleized slate, and various lumber products. Harrisburg adopted the commission form of government in December, 1913, the power being vested in a mayor and four councilmen, each of whom acts as superintendent of one of the five city departments, viz., public affairs, accounts and finance, public safety, streets and public improvements, and parks and public property. The mayor holds office for four years, and the councilmen for two. All officers are chosen by the council, except the city controller, who is elected by popular vote. The schools are governed by an elective board of nine members. The municipal income in 1914 was about \$1,508,000, while the expenditures amounted to \$1,475,000. Harrisburg has always been a growing and progressive community. The following is a statement of its population by decades: 1850, 7834; 1870, 23,104; 1880, 30,702; 1890, 39,385; 1900, 50,167; 1910, 64,186; 1914 (U. S. est.), 69,493; 1920, 75,917.

In 1719 John Harris, an English trader, settled here and 14 years later secured grants of 800 acres in this vicinity. In 1753 his son established a ferry, and the place was long known as Harris's Ferry. In 1785 a town was laid out and named Harrisburg, but in the following year it was renamed Louisburg, in honor of Louis XVI. In 1791 it was incorporated as Harrisburg; in 1812 it became the capital of the State, and in 1860 it was chartered as a city. The assembling here of the Harrisburg Convention in 1828, which was attended by representatives of the radical protectionists of New England and the Middle States, led to the passage of the high protective-tariff bill of that year. In 1830 Harrison and Tyler were nominated at Harrisburg. Consult Egle, *Centenary Memorial of the Fraction of the County of Dauphin and the Founding of Harrisburg* (Harrisburg, 1880), and Morgan, *Annals of Harrisburg* (rev. by F. M. Black, 1906).

HARRISON. A city and the county seat of Boone Co., Ark., 58 miles east-southeast of Eureka Springs, on the Missouri and North Arkansas Railroad (Map: Arkansas, B 1). It has a government building which cost \$100,000 and large railway shops. The town is in a fertile district adapted to fruit growing, farming, lumbering, and stock raising. There are several flour mills and other industrial establishments. Pop., 1900, 1551; 1910, 1602.

HARRISON. A town in Hudson Co., N. J., on the Passaic River, and on the Delaware, Lackawanna, and Western, the Erie, and the Pennsylvania railroads (Map: New Jersey, D 2). It adjoins Newark, with which it is connected by three steel bridges. The town has extensive manufacturing interests, which include a large steel plant, pump and tube mills, elevator works, roller-bearing factory, hoisting-engine plant, wall-plaster works, metal-novelty factory, foundries, tool shops, marine-engine works, wire and wire-cloth factories, electric works, machine shops, lumber and stone yards, a tannery, breweries, etc. Settled as early as 1668, Harrison was incorporated in 1873, the charter of that date being still in operation. The government is

vested in a mayor and a common council, which is elected by wards. Pop., 1900, 10,596; 1910, 14,498; 1914 (U. S. est.), 16,160; 1920, 15,721.

HARRISON, BENJAMIN (c.1740-91). An American Revolutionary patriot, one of the signers of the Declaration of Independence, born at Berkeley, Va. As a member of the Virginia House of Burgesses, in 1765, he opposed the Stamp Act resolutions of Patrick Henry, which he considered to be impolitic and premature. From 1774 to 1777 he was one of Virginia's representatives in the Continental Congress, and was a member of many important committees, though he rendered the greatest service as president of the Board of War. On June 10, 1776, he introduced a resolution declaring the independence of the American Colonies and on July 4 reported the Declaration of Independence. From 1777 to 1782 he was Speaker of the House of Burgesses and from 1782 to 1784—for two terms—was Governor of the State and then returned to the Legislature for four years. In 1788 he was a member of the Virginia convention which ratified the Federal Constitution, though he, along with Patrick Henry and other men of prominence, opposed it—largely because of the absence of a bill of rights. He was the father of William Henry Harrison (q.v.). Consult Sanderson, *Biography of the Signers of the Declaration of Independence*, edited by Brotherhead (Philadelphia, 1865).

HARRISON, BENJAMIN (1833-1901). The twenty-third President of the United States, born at North Bend, Ohio, Aug. 20, 1833. His father, John Scott Harrison (1804-78), a son of President William Henry Harrison, represented the Whigs in Congress from 1853 to 1857. Benjamin passed his early years on his father's farm and at a log schoolhouse in the neighborhood. Later he studied two years at Farmers College, at College Hill, near Cincinnati, and in 1852 he graduated at Miami University. After studying law in Cincinnati, he was admitted to the bar (1853), married the daughter of Rev. J. W. Scott, and settled in Indianapolis in 1854. In 1860 he was elected reporter of the Supreme Court of Indiana, and in a political debate with Thomas A. Hendricks soon afterward acquired reputation as a speaker. He entered the Federal army as second lieutenant in July, 1862; assisted in organizing the Seventieth Indiana Regiment; was promoted in August, 1862, to be colonel; served in Kentucky and Tennessee; led a charge at Resaca, Ga., May 15, 1864, in which one-third of his command was killed or disabled; commanded his brigade with signal bravery at Kennesaw Mountain, June 20 to July 3, 1864, and at Peachtree Creek, July 20; took part in the operations around Nashville, and on Jan. 23, 1865, was brevetted brigadier general of volunteers "for ability and manifest energy and gallantry in command of brigade." Returning to civil life, he resumed his occupation of reporter of the Supreme Court, but in 1868 declined reelection. In 1876 he was the Republican candidate for Governor of Indiana, but was defeated, though running 2000 votes ahead of his ticket. In 1878 he was appointed a member of the Mississippi River Commission. In 1880 he was elected United States Senator, taking his seat March 4, 1881, and during his term of office opposed alien ownership of large tracts of land and the Blair Educational Bill, favored civil-service reform, and was one of a committee to

perfect and report a bill restricting Chinese immigration. In 1888, at the Republican Convention in Chicago, he was nominated for the presidency, receiving 84 votes on the first ballot, 217 on the fourth, and 544 on the eighth. In the ensuing election he received 233 electoral votes to Cleveland's 168, Levi P. Morton, of New York, being elected Vice President. His administration was marked by no especially conspicuous features; but during it the Pan-American Congress, the initiation of the policy of commercial reciprocity (q.v.), and the attempt to annex Hawaii to the United States attracted much attention. The industrial situation was much altered by the McKinley Tariff of Oct. 1, 1890; the monetary system was disturbed by the Sherman Silver Bill; civil-service reform was extended; the Louisiana Lottery was abolished; the condition of both the army and the navy was improved; and many highly creditable appointments to office were made, especially in the Federal judiciary. In the summer of 1892 Harrison's Secretary of State, Mr. Blaine (q.v.), resigned and became an avowed candidate for the presidential nomination; but Harrison was again nominated, only to be defeated in the election by his predecessor, Grover Cleveland (q.v.), receiving 145 electoral votes. After leaving office he accepted a lectureship in international law at Leland Stanford Junior University, California. During the remaining years of his life he devoted himself to the practice of law, being retained in several cases of national importance, and in 1899 appearing as counsel for Venezuela before the commission appointed to arbitrate the boundary dispute with England. He was the principal representative of the United States at The Hague Conference (1899). His death occurred after a brief illness, at Indianapolis, March 13, 1901. He wrote numerous magazine articles, made a number of able speeches on public occasions, and published *This Country of Ours* (1897), in which he gave a description of the practical workings of the government. Another book, *Views of an Ex-President*, was published posthumously in 1901. Some of his speeches are collected by Hedges, *Through the South and West with President Harrison* (New York, 1892). Those which he delivered while President were published under the title of *Public Papers and Addresses of Benjamin Harrison* (Washington, 1893). Consult Wilson (ed.), *The Presidents of the United States* (New York, 1894), and the campaign biography by Wallace (Philadelphia, 1888). For an account of Harrison's administration, see UNITED STATES.

HARRISON, CARTER HENRY (1825-93). An American politician. He was born near Lexington, Ky., and, like William Henry and Benjamin Harrison, was a descendant of the Virginia Harrisons. He graduated at Yale in 1845, studied law the following year at Transylvania University at Lexington, was engaged in managing his large estate from 1847 to 1851, traveled for a year or more in Europe, and, in company with Bayard Taylor, in Asia Minor, Syria, and Palestine, and in 1852 returned to Kentucky to practice his profession. He soon began to take an active interest in politics and became an opponent of disunion and the extension of slavery. In 1857 he removed to Chicago, where faith in the future of the city led him to make profitable investments in real estate. In 1871 he was elected county commissioner of Cook County and from 1874 to 1878

was a Democratic member of Congress. In 1879 he was chosen mayor of Chicago and was re-elected for biennial terms in 1881, 1883, and 1885. In 1884 he was the Democratic candidate for Governor of Illinois, but was defeated by Governor Oglesby by 14,500 votes. In 1891 he was an independent candidate for mayor and drew so largely from the vote of the Democratic candidate that the Republican was elected. The year 1893 was the year of the World's Fair at Chicago, and it was deemed by the business community, as well as by the reformers and promoters of the great enterprise, particularly necessary to have an able, high-minded administrator in the mayor's office. These elements joined with the Republicans and secured the nomination of Samuel W. Allerton, a man of acknowledged fitness. Harrison, however, after a long and bitter contest, in which there were frequent charges of fraud and intimidation, secured the Democratic nomination, and in April was triumphantly elected. He was assassinated on October 29 following, one of the closing days of the great Exposition. Although a political demagogue, Harrison differed from the modern political boss in that he relied on his personal popularity rather than machine organizations to win his victories, and, despite the fact that his methods of obtaining and maintaining power were somewhat open to question, it was never charged that he himself derived pecuniary gain from his office.

His son, **CARTER HENRY** (1860-), was born in Chicago. He was educated at Altenburg, Germany, and at the Law School of Yale, where he graduated in 1883. From 1891 to 1894 he was editor of the *Chicago Times*. He was mayor of Chicago from 1897 to 1905 and in 1911 was again elected, for the term ending in 1915.

HARRISON, CHARLES CUSTIS (1844-). An American university provost. He was born in Philadelphia, was educated at the University of Pennsylvania (A.B., 1862; A.M., 1865), and received the honorary degree of LL.D. from Columbia (1895), Princeton (1896), Yale (1901), and the University of Pennsylvania (1911). From 1863 to 1892 he was engaged in manufacturing. He became a trustee in 1876, was acting provost in 1894-95, and provost from 1895 to 1911, of the University of Pennsylvania.

HARRISON, CHARLES LEWIS (1857-1912). An American civil engineer, born in Callaway Co., Mo. He graduated from the University of Missouri (C.E.) in 1880; served on Mississippi River and other engineering operations; was in business for five years; and thereafter was in succession assistant engineer for the Sanitary District of Chicago, division engineer on the Chicago Drainage Canal, in the employ of the United States Board of Engineers on Deep Waterways, and of the Isthmian Canal Commission, and in 1900-02, as chief engineer of the Denver Union Water Company, built the Lake Cheesman Dam. While assistant engineer of the Pennsylvania Railroad (1902-08), he was engaged in the construction of the East River tunnels. In 1909-10 he served as deputy chief engineer on the board of water supply of New York City.

HARRISON, CONSTANCE CARY (1843-1920). An American novelist, mother of Francis Burton and Fairfax Harrison. She was born at Vacluse, Va., and in 1867 was married to

Burton Harrison, a Virginia lawyer and private secretary to Jefferson Davis. With him she removed later to New York City, where she wrote many books and contributed to periodicals. Among her more noteworthy volumes of fiction are: *Golden Rod* (1880); *Bar Harbor Days* (1887); *The Anglomaniacs* (1887); *Sweet Bells out of Tune* (1893); *A Daughter of the South* (1892); *An Errant Wooing* (1895); *A Merry Maid of Arcady and Other Stories* (1897); *A Son of the Old Dominion* (1897); *Good Americans* (1898); *A Princess of the Hills* (1901); *Transplanted Daughters* (1909). In 1911 appeared *Recollections Grave and Gay*. For children she wrote: *Old-Fashioned Fairy Book* (1884) and *Folk and Fairy Tales* (1885). Worthy of mention also is *Esternals of Modern New York* (1896). Her dramatic work consists chiefly of adaptations from the French.

HARRISON, FAIRFAX (1869-). An American railroad president, son of Constance Cary Harrison and brother of Francis Burton Harrison. He was born in New York City, graduated from Yale (B.A., 1890) and Columbia (M.A., 1891) universities, and was admitted in 1892 to the bar of New York City, where he practiced for four years. From 1896 to 1910 he served as solicitor, assistant to the president, and vice president of the Southern Railway Company. For three years he was president of the Chicago, Indianapolis, and Louisville Railway, and in 1913 he returned to the Southern Railway as its president.

HARRISON, FRANCIS BURTON (1873-). An American public official, son of Constance Cary Harrison and brother of Fairfax Harrison. He was born in New York City, graduated from Yale University in 1895 and from the New York School of Law in 1897, taught in the New York night law school in 1897-99, and was captain and adjutant general of United States Volunteers in 1898-99 during the Spanish-American War. He was elected member of Congress in 1903 and was again in the House from 1907 to 1913, when he resigned, having been appointed by President Wilson Governor-General of the Philippine Islands.

HARRISON, FREDERIC (1831-1923). The leader of the English Positivists and an accomplished man of letters, whose work in the fields of literature, history, philosophy, religion, and politics is sound and distinguished. Born in London, he was educated at King's College School, London, and at Wadham College, Oxford. He became fellow and tutor at Wadham, and was called to the bar in 1858. After practicing in the courts of equity he was appointed a member of the royal commission upon trade-unions (1867-69), secretary of the royal commission for digesting the law (1869-70), and professor of jurisprudence and international law at Lincoln's Inn Hall (1877-89). In 1889-92 he was alderman in the London County Council. In politics he supported the Liberal party. He was the president of the Positivist Committee (1880-1905). Among his many works are: *Meaning of History* (1862; enlarged, 1894); *Order and Progress* (1875); *The Choice of Books* (1886); *Oliver Cromwell* (1888); *Annals of an Old Manor House* (1893; new ed., 1899); *Victorian Literature* (1895); *The Millenary of King Alfred* (1897); *Tennyson, Ruskin, Mill, and Other Literary Estimates* (1900); *George Washington and Other American Addresses*

(1901); *John Ruskin* (1902); *Theophano* (1904), an unfortunate lapse into historical romance; *Chatham* (1905); *Memories and Thoughts* (1906); *The Creed of a Layman* (1907); *Autobiographic Memoirs* (1911); *The Positive Evolution of Religion* (1912).

HARRISON, GABRIEL (1818-1902). An American author and artist, born in Philadelphia, Pa. For several years he was an actor and at one time supported Charles Kean. Afterward he became the manager of several theatres and produced, among other plays, a dramatization of Hawthorne's *Scarlet Letter* (1878). He is also the author of a *Life of John Howard Payne* (1873) and a number of critical articles, notably *Edwin Forrest, the Actor and the Man*, *Critical and Reminiscent* (1880). He did much for the encouragement of the free art schools in connection with the Brooklyn Academy of Design and was also a portrait and landscape painter.

HARRISON, HENRY SYDNOB (1880-). An American novelist, born at Sewanee, Tenn. He graduated from Columbia in 1900 and received an honorary A.M. from the same university in 1913. The following year he was elected a member of the National Institute of Arts and Letters. He is author of *Queed* (1911), which was very well received; *V. V.'s Myos* (1913); *Captivating Mary Carstairs* (1914), first published in 1911 under the pen name "Henry Second"; and of contributions to the *Atlantic Monthly* and other magazines.

HARRISON, JAMES ALBERT (1848-1911). An American philologist, born at Pass Christian, Miss., and educated at the University of Pennsylvania. In 1871 he was appointed professor of Latin and modern languages in Randolph Macon College and in 1876 was chosen professor of English and modern languages in Washington and Lee University. He left this chair in 1895 to become professor of English and Romance languages at the University of Virginia. A short time before his death his title was changed to professor of Teutonic languages. He was an editor of the *Century* and the *Standard* dictionaries, and edited (with W. M. Baskerville): *Dictionary of Anglo-Saxon Poetry* (1883); *Library of Anglo-Saxon Poetry* (5 vols., 1883); *Beowulf* (1883); *Madame de Sévigné's Letters* (1898); *Corneille's Mcomède* (1901); *Poe's Complete Works* (17 vols., 1902). Among his other works are contributions to *Anglia* on "Negro English"; *Group of Poets and their Haunts* (1874); *Greek Vignettes* (1877); *Spain in Profile* (1879); *Story of Greece* (1885); *Life and Letters of Edgar Allan Poe* (1903); *Life of George Washington* (1906); *Last Letters of H. A. Poe to Sarah H. Whitman* (1909).

HARRISON, JANE ELLEN (1850-). An English archaeologist and Hellenist, born in Yorkshire. She studied at Newnham (Cambridge) and at the British Museum, visiting also the museums of Berlin, Munich, Rome, and Athens. After 1882 she lectured at the British Museum, South Kensington Museum, Cambridge, and Oxford. She received the honorary degrees of Litt.D. (Durham) and LL.D. (Aberdeen). Besides various papers in the learned periodicals, she wrote: *Myths of the Odyssey* (1882); *Introductory Studies in Greek Art* (1885); *Mythology and Monuments of Ancient Athens* (1890), with Mrs. A. W. Verrall; *Greek Vase-Painting* (1894), with D. S. MacColl; *Prolegomena to the Study of Greek Religion* (1903);

2d ed., 1908); *The Religion of Ancient Greece* (1906); *Primitive Athens as Described by Thucydides* (1906); *Themis. A Study of the Social Origins of Greek Religion* (1912); *Ancient Art and Ritual* (1913).

HARRISON, JOHN (1693-1776). An English inventor, who became celebrated as "Longitude Harrison." He was born at Foulby in Yorkshire, where his father was the village carpenter and clock repairer. After receiving a meagre education he learned carpentering from his father and, in the intervals of his work, studied the construction of clocks and watches with a view to their improvement. His experiments resulted in the invention of the "gridiron pendulum" for clocks, which, by an arrangement of compensating steel and brass rods, allows for the expansion caused by variations of temperature; a "recoil escapement" to prevent the constant oiling and clogging of the pallets; and the "going ratchet" universally used to prevent a timepiece losing while being rewound. When the British government offered successively £10,000, £15,000, and £20,000 for the discovery of a method for determining the longitude at sea within 60, 40, and 30 geographical miles, he made four chronometers, now in the Greenwich Royal Observatory, each with a "compensation curb" to the balance wheel. All qualified for the first prize, the fourth, on a voyage to Barbados and return, determining the longitude within 10 miles. After much vexatious delay and petitions to Parliament the prize was paid to him in installments, it being stipulated that he should publish particulars of his invention *pro bono publico*. He wrote *A Description Concerning such Mechanism as Will Afford a Nice or True Mensuration of Time* (1767), and other pamphlets in connection with his discoveries. In 1897 his tomb in Hampstead Church was restored by the London Company of Clockmakers. Consult Smiles, *Men of Invention and Industry* (London, 1884).

HARRISON, JOSEPH, JR. (1810-74). An American engineer, born in Philadelphia. He was conspicuously successful as a locomotive builder in the early days of that industry, and in 1840 his "Gowan and Marx" locomotive attracted the attention of two Russian engineers, who had been ordered by Emperor Nicholas to examine the systems of railroads and railroad machinery in Europe and America. As a consequence, he and his partner, A. M. Eastwick, together with Thomas Winans, of Baltimore, secured a contract to build the locomotives and other machinery for the railroad from St. Petersburg to Moscow, and later another contract, which continued until 1862, to repair the rolling stock of the railroad. On the expiration of these contracts he returned to Philadelphia, where he collected a gallery of paintings. In 1869 he published a volume containing a poem entitled *The Ironworker and King Solomon*, his autobiography, and numerous incidents of his life in Russia; and a few years later another, entitled *The Locomotive Engine, and Philadelphia's Share in its Early Improvements* (1872).

HARRISON, JOSEPH LE ROY (1862-). An American librarian, born at North Adams, Mass. He was educated at Cornell University and the University of Heidelberg and, after some newspaper work, studied at the New York State Library School, Albany. Thereafter he served as librarian of legislation in the New

York State Library (1893-94), librarian of the Providence Athenæum (1894-1911), and of the Forbes Library at Northampton, Mass. (September, 1911-). In 1909 he superintended the American Library Association Exhibit at the Paris Exposition. He edited: *Cap and Gown* (1893), *With Pipe and Book* (1897), *In College Days* (1901)—collections of college verse; and is author of *The Great Bore, a Souvenir of Hoosac Tunnel* (1891); *Guide to the Study of James Abbott McNeill Whistler* (1895), with W. G. Forsyth; *The Providence Athenæum, 1753-1911* (1911).

HARRISON, (LOVELL) BIRGE (1854-). An American genre and landscape painter, brother of T. Alexander Harrison. He was born in Philadelphia and studied with Carolus Duran (q.v.) and at the Ecole des Beaux-Arts under Cabanel. In 1881 he exhibited at the Salon and in 1882 he returned to America and subsequently spent considerable time (1889-93) painting and sketching in Australia, the South Seas, and New Mexico. He received numerous prizes and medals, including the gold medal at the Pennsylvania Academy of Fine Arts in 1910. He became a member of the National Academy of Design (1910), National Institute of Arts and Letters, New York Water Color Club, Society of American Artists, and director of the landscape school of the Art Students' League. He contributed very frequently to art and other magazines and in 1909 published *Landscape Painting*. Harrison is especially known as a painter of snow scenes, which he renders with fidelity to nature and much poetic feeling. Among his best-known paintings are: "November" (Museum, Marseilles); "Return from the First Communion"; "Summer Idyl"; "Calling Home the Cows"; "The Hidden Moon," "Quebec from the River" (both exhibited in 1907); "Moonlight off Charleston" (1908); "The Flat-iron Building in a Blizzard" (1909); "Sunset Reflections" (1912); "Floating Ice"; "Moonrise on the Beach" (1913). Among his chief works in American public collections are: "The Mirror," Wiltach collection, Philadelphia; "Autumn Sunset" and "A Glimpse of the St. Lawrence," Pennsylvania Academy of Fine Arts, Philadelphia; "Fifth Avenue at Twilight," Detroit Museum.

HARRISON, MARY ST. LEECH (pen name LUCAS MALET) (1852-). An English novelist, daughter of Charles Kingsley (q.v.). She was born at Eversley rectory and was educated at home and at University College, London. In 1876 she married William Harrison, a young clergyman in whom her father had been much interested, and afterward settled at Clovelly in Devonshire, amid the scenes of her father's boyhood. Her husband died in 1897, after which she visited the Continent, America, and India in search of health. Her popular novels of English life are written with an ethical purpose. Among them are: *Mrs. Lorimer* (1882); *The Wages of Sin* (1891); *The Carissima, a Modern Grotesque* (1896); *The Gateless Barrier* (1900), a ghost story; *Sir Richard Calmady* (1901), a painful but powerful novel; *The Score* (1909); *Adrian Savage* (1911).

HARRISON, ROBERT ALEXANDER (1833-78). A Canadian jurist. Born in Montreal, Province of Quebec, he early went to Toronto and was educated at Upper Canada College, which he left in 1849 to study law. At 18, while still a law student, he began the preparation of a digest of

all cases determined in the Queen's Bench and practice courts of Upper Canada from 1823 to 1851. It was completed and published in two years and became a work of permanent value. In 1854 he was appointed chief clerk in the Crown Law Department for Upper Canada, and in 1855 was called to the bar. At this time he was a frequent and influential contributor to the *Daily Colonial* (Toronto) and other periodicals. In 1859, after writing several legal works, he retired from the chief clerkship and began active practice, in which he was highly successful. In 1867-72, as a member of the Legislature for West Toronto, he helped enact important laws. For several years he was joint editor of the *Upper Canada Law Journal*, and in 1875 he became Chief Justice of Ontario. He published: *Digest of Cases Decided in the Queen's Bench, Upper Canada, from 1823 to 1851* (1852); *Statutes of Upper Canada to 1856* (1857); *Common Law Procedure Act* (1857); *Sketch of the Legal Profession in Upper Canada* (1858); *Manual of Costs in County Courts* (1858); *The Assessor's Guide* (1864); *The Municipal Manual for Upper Canada* (1867).

HARRISON, ROSS GRANVILLE (1870-). An American anatomist, born at Germantown (Philadelphia). He graduated in 1889 (Ph.D., 1894) from Johns Hopkins University, where he was instructor and associate in anatomy in 1896-99 and assistant professor of anatomy until 1907. In 1899 he received the degree of M.D. from the University of Bonn. In 1907 he was appointed to the professorship of comparative anatomy at Yale University. He became managing editor of the *Journal of Experimental Zoology* in 1903 and trustee of the Marine Biological Laboratory at Woods Hole, Mass., in 1908, was president of the American Association of Anatomists in 1911-13, president of the American Society of Naturalists in 1912-13, and in 1914 was awarded the Archduke Rainer gold medal of the Austrian Zoological and Botanical Society.

HARRISON, SAMUEL BEALY (1802-67). A Canadian statesman. Born in Manchester, England, he studied law and was called to the English bar. About 1835 he came to Canada and in 1838-39 was private secretary to Sir George Arthur, the last Lieutenant Governor of Upper Canada. Taking an active interest in the issues which precipitated the Act of Union of 1841 (see *CANADA, History*), he at all times strongly supported responsible government. After two unsuccessful attempts to enter Parliament, he was elected as a moderate Liberal member for Kingston to the Canada Legislative Assembly. Having been made Provincial Secretary for Upper Canada in the first executive council summoned by Lord Sydenham under the Act of Union, he retained this position until 1843, then resigning because he opposed the removal of the seat of government to Montreal. For some months he was Premier. The administration was a coalition, the Conservative members being led by William Henry Draper (q.v.) and the Liberals, or Reformers, supporting Robert Baldwin (q.v.) and Harrison. Harrison procured the passage of an important measure providing municipal institutions for Upper Canada. From 1841 to 1844 he was a member of the Board of Public Works, and later he was made a county and surrogate judge.

HARRISON, SUSAN FRANCES (1867-). A Canadian author. She was born in Toronto,

Ontario, and was educated in her native city and in Montreal. She began early to write reviews and short stories for the press and later was music critic. Her contributions in prose and verse were accepted by the leading magazines of Great Britain and the United States. She published many songs written and composed by herself, became an authority on old French-Canadian folk songs, and made many studies of French-Canadian life and character. Her principal publications are: *Crowded Out* (1888), a collection of short stories; *The Canadian Birthday Book* (1889); *Pine, Rose, and Fleur-de-lis* (1889); *Down the River* (1891); *The Forest of Bourg-Marie* (1900), a novel.

HARRISON, THOMAS (1606-60). An English regicide. He was born at Newcastle-under-Lyme, Staffordshire, and although of humble parentage received a good education. He studied for the law in an attorney's office in Clifford's Inn, London, but at the opening of the Civil War in 1642 joined the regiment of life guards raised by Essex. He distinguished himself in several actions and rose to the rank of major general. In 1646 he was elected member of Parliament for Wendover. He was in command of the escort that conveyed King Charles from Hurst Castle to London and was one of the most energetic advocates of the King's trial and execution. In 1650, during Cromwell's absence in Ireland, he was commander in chief of the military forces in England, and in 1651 was elected a member of the Council of State, to which he had been nominated two years previously. His connection with the Fifth Monarchy Men (q.v.) and his conspiracies against Cromwell resulted in imprisonment and the loss of his commission and offices. At the Restoration he refused to flee, and as one of the seven regicides excluded from the Act of Indemnity was condemned to death. Justifying his actions and bearing himself bravely on the scaffold, he was executed on Oct. 13, 1660. Consult Ida Taylor, *Revolutionary Types* (London, 1904), and Simpkinson, *T. Harrison, Regicide* (London, 1905).

HARRISON, THOMAS (1839-1900). A Canadian educator. He was born at Sheffield, Sunbury Co., New Brunswick, graduated with high honors in mathematics at Trinity College, Dublin, and from Dublin also received the degree of LL.D. in 1869. In 1870 he was appointed professor of the English language and literature and also of mental and moral philosophy in the University of New Brunswick at Fredericton. In 1885 he became president of the university and professor of mathematics. The last-named position he resigned in 1892 on being elected chancellor. In 1874 he was made superintendent of the meteorological station at Fredericton. He wrote the reports of tri-hourly observations in *Meteorological Observations of the Dominion of Canada* (Ottawa).

HARRISON, (THOMAS) ALEXANDER (1853-). An American genre and landscape painter, brother of L. Birge Harrison. He was born in Philadelphia, and studied at the Pennsylvania Academy of Fine Arts and later under Gérôme (q.v.), at the Ecole des Beaux-Arts, and under Bastien-Lepage, but was most strongly influenced by the works of Cazin and Bernard. His work is characterized by grace of line and by luminous color, delicate in its effect. He is especially noted for his marines, which are rendered with broad surfaces that well express the transparency

of the ever-changing color of water and sky. Although frequently visiting the United States, he took up his residence in Paris, where he came to rank among the highest of the colony of American artists. He was made Officer of the Legion of Honor in 1901 and Officer of Public Instruction, by the French government, and became a member of the National Academy of Design (1902), the Société Nationale des Beaux-Arts, National Institute of Arts and Letters, the Royal Institute of Painters in Oil Colors, London, and a corresponding member of the Societies of Secessionists, Berlin and Munich. He received gold medals at Paris (1889) and at the Pennsylvania Academy of Fine Arts, Philadelphia (1894). Among his chief works in American public collections are: "Castles in Spain," Metropolitan Museum of Art, New York; "Amateurs," Art Institute of Chicago; "The Wave," Pennsylvania Academy of Fine Arts, Philadelphia; "Twilight," St. Louis Museum and Corcoran Gallery, Washington; "The Great Mirror" and "Marine," Wiltach collection, Philadelphia. He is represented in the Luxembourg Gallery, Paris, by "Arcady" and "Solitude," and elsewhere in France and in the Dresden Gallery. Later important works are: "Setting Sun"; "Golden Sands" (1912); "Caressing Waves" (1913).

HARRISON, WILLIAM (1534-93). An English topographer and chronologist, born in London. He was educated in the St. Paul and Westminster schools, took art courses at Oxford and divinity at Cambridge, became chaplain to Lord Cobham of Kent, and afterward rector of Radwinter, Essex. He was also canon at Windsor, where he died; but he is most widely known by his work on the *Chronicles* of Holinshed, the source whence Shakespeare drew the material for his historical plays. Harrison's share therein is invaluable for the local color of the sixteenth century, being *An Historicall description of the Iland of Britaine, with a brief rehearsal of the nature and qualities of the people of England and such commodities as are to be found in the same comprehended in three books and written by W. H.* The New Shakespeare Society brought out a modern edition of this work in 1877-81.

HARRISON, WILLIAM HENRY (1773-1841). Ninth President of the United States. He was the son of Benjamin Harrison (1740-91), a signer of the Declaration of Independence; was born at Berkeley, Charles City Co., Va., Feb. 9, 1773; was educated at Hampden-Sidney College and, although the profession of medicine had been chosen for him, entered the army as an ensign in 1791, became a lieutenant in June, 1792, and served against the Indians as an aide-camp on the staff of General Wayne, taking part in the battle of the Maumee and in other engagements, and becoming a captain in May, 1797. Resigning in June, 1798, he was soon appointed Secretary of the Northwest Territory under Gen. Arthur St. Clair, but in October, 1799, resigned that position to become a Territorial Delegate in Congress, where, in May, 1800, he secured the passage of a law encouraging the sale of land in sections or half sections to actual settlers. The same year he was appointed Governor of Indiana Territory, which then comprised the region later embraced in the States of Indiana, Illinois, Michigan, and Wisconsin, and for a time subsequent to the Treaty of 1803 his jurisdiction also extended over that part of the lands then acquired from France by

the Louisiana Purchase (q.v.), which was known as the District of Louisiana. Harrison's executive work in the Northwest continued until September, 1812, and was marked by conspicuous success in a variety of difficult undertakings, in which he secured the hearty appreciation of the people affected by his administration and the marked approval of the national government. With the proslavery party he sought the establishment of a second-grade government, with a representative assembly, as a means of promoting slavery. The first law passed by that assembly (1805) was one in response to Harrison's first recommendation, that for preventing the sale of liquor to the Indians. In the courts, too, and on various occasions he urged justice to the red men. He concluded several treaties with the Indians by which a total amount of about 75,000 square miles of territory was ceded to the United States, the first among them being the Treaty of Fort Wayne, on June 7, 1803. Some of these cessions aroused the hostility of Tecumseh and his brother, the Prophet, who, it was alleged, were encouraged by the British, but after a few ineffectual conferences Harrison vanquished them at the battle of Tippecanoe (q.v.), Nov. 7, 1811. Upon the outbreak of the War of 1812 he became a major general of Kentucky militia and in August, 1812, was made a brigadier general in the regular army and soon afterward was appointed to the chief command in the Northwest, in which capacity, with the rank, after March, 1813, of major general, he was actively engaged during the Western campaigns of the war, becoming again conspicuous by his brave defense of Fort Meigs (q.v.) and by his complete victory over the British at the battle of the Thames, Oct. 5, 1813. Harrison had thus repeatedly shown marked military talent, and the end of the war left him, next to Jackson, the most prominent military figure in American public life. Withdrawing, however, from the army, Harrison, in July, 1814, negotiated the second Treaty of Greenville, by which the Indians were detached from the British interest. From 1816 to 1819 he was a member of Congress from the district embracing Cincinnati, and from 1819 to 1821 he served in the State Senate. In 1825 he returned to Washington as Senator from Ohio, retaining this position until 1828, when he was sent as Minister to Colombia. Upon returning from that post in the following year, he retired for several years from public life. In 1835 he was nominated for the presidency by Whig conventions in Indiana, Ohio, and Maryland, and by an Antimasonic convention at Harrisburg, Pa., and in the ensuing election succeeded in carrying seven States—Vermont, New Jersey, Delaware, Maryland, Kentucky, Ohio, and Indiana—securing 73 electoral votes, as against 170 given to Van Buren and 51 divided among the three other candidates. Moreover, the popular vote for Harrison in Connecticut, Rhode Island, and Pennsylvania approached very closely, and in Illinois and New York compared favorably with that of Van Buren. When, finally, the financial policy of Jackson and Van Buren brought such disastrous results as to turn against the administration a large portion of the people, the situation became particularly favorable for whoever might be nominated by the Whig party in 1840. Although in many respects Henry Clay appeared as the leader of the party, he could not command its complete support as a presidential candidate,

and accordingly, in the interest of harmony, he refrained from an active contest and left Harrison as the leading candidate for the nomination. The Whig Convention met at Harrisburg, Dec. 4, 1839, and comprised 254 delegates. The "unit rule" was introduced, and upon the first ballot Henry Clay received 103 votes, General Harrison 94, and General Scott 57. On the fifth ballot, during the third day of the convention, Harrison received 148 votes, Clay 90, and Scott 16, and Harrison was accordingly declared the nominee of the party. There forthwith began a political campaign which for popular enthusiasm and widespread activity has probably never been equaled in American politics. Throughout the country meetings, processions, and a great variety of "demonstrations" were held, and the general public took an energetic share in the contest. New campaign methods were introduced, and the log cabin and hard cider became especial emblems of the party of "Tippecanoe and Tyler too." The "stump speaker" was a prominent feature of this new method of campaigning, even General Harrison himself making a series of addresses. The early State elections in some of the New England States and in Ohio and Kentucky resulted in Whig victories, and in the presidential election Van Buren carried only seven States, of which but two were Northern States, with a total electoral vote of only 60, as against the 234 votes secured by Harrison. Although in good health at the time of his inauguration, General Harrison was taken ill, and died on April 4, 1841, the whole political situation being thus suddenly altered, and the Whig President being succeeded by John Tyler (q.v.), a former Democrat. William H. Harrison was the grandfather of President Benjamin Harrison.

Bibliography. Dawson, *A Historical Narrative of the Civil and Military Services of Major-General Harrison* (Cincinnati, 1824); Webster, "William Henry Harrison's Administration of Indiana Territory," in the *Publications of the Indiana Historical Society*, vol. iv (Indianapolis, 1907); Cullum, *Campaigns of the War of 1812-15 against Great Britain* (New York, 1879). For the political conditions under which Harrison was elected President, see Mrs. Coleman, *The Life of John J. Crittenden* (Philadelphia, 1871). For brief biographical sketches, see Bostwick, "William Henry Harrison," in *The Presidents of the United States* (New York, 1894), edited by James Grant Wilson; and Stoddard, . . . *Harrison, Tyler, and . . . Polk* (New York, 1888). A few of Harrison's letters are printed in the *Quarterly Publications of the Historical and Philosophical Society of Ohio*, vols. ii and iii (Cincinnati, 1907-08), and in the *Transactions of the same society* is Harrison's "Discourse on the Aborigines of the Valley of the Ohio."

HARRISON, WILLIAM POPE (1830-). An American Methodist Episcopal clergyman and editor, born in Georgia. Entering the ministry of the Methodist Episcopal Church South, in 1882 he was elected book editor of his denomination, and in 1886 he undertook also the editorship of the *Methodist Quarterly Review*. He continued to serve in both positions until 1895, when he was succeeded by Dr. John J. Tigert. He edited the *Journal* of the general conference for 1882, 1886, 1890 (he was secretary in 1890 and 1894), and also the book of *Doctrines and Discipline* for 1886 and 1892. He is author of

Methodist Union (1892); *The Gospel among the Slaves* (1893); *The High Churchman Disarmed*; *The Living Christ*; *Lights and Shadows of Forty Years*.

HARRISONBURG. A town and the county seat of Rockingham Co., Va., 122 miles northwest of Richmond, on the Baltimore and Ohio, the Chesapeake Western, and the Southern railroads (Map: Virginia, F 3). It is in the picturesque and fertile Shenandoah valley, is of considerable importance as the commercial centre for this region, carrying on a large trade in fruit, live stock and poultry, and has foundries and machine shops, a tannery, planing mills, an incubator factory, flouring mills, etc. The town contains a State normal and industrial school for women and a hospital. The water works and electric-light plant are owned by the municipality. Pop., 1900, 3521; 1910, 4879.

HARRISONVILLE. A city and the county seat of Cass Co., Mo., 45 miles south by east of Kansas City, on the Missouri Pacific, the Missouri, Kansas, and Texas, the Kansas City, Clinton, and Springfield, and the St. Louis and San Francisco railroads (Map: Missouri, B 3). It is in an agricultural and dairying region and has fine county and Federal buildings. There are some manufactures. The light plant is owned by the city. Pop., 1900, 1844; 1910, 1947.

HARRISSE, A'RÈS, HENRY (1830-1910). A French bibliographer and historian, born in Paris, of Russian-Hebrew parentage. Through long years of investigation in the archives of different European countries he was enabled to collect material for such works as *Bibliotheca Americana Vetustissima* (1866), a bibliography of publications about America from 1492 to 1551, invaluable to modern students of that period. M. Harriasse prepared perhaps the best biography yet published of Columbus, made a uniquely important collection of the early maps of America, and while shut up in Paris during the siege of 1870 compiled *Notes pour servir à l'histoire, à la bibliographie et à la cartographie de la Nouvelle-France et des pays adjacents* (1872). He published also: *Fernand Colomb, sa vie et ses œuvres* (1872); *Les Colombes de France et d'Italie* (1874); *Christophe Colomb, son origine, sa vie, ses voyages, sa famille* (1884-85); *Jean et Sébastien Cahot* (1882); *Les Corte-Real* (1883); *Excerpta Colombiana* (1887); *Découverte de l'Amérique du Nord* (1892); *Autographes de Christophe Colomb* (1893); *Découverte de Terre-Neuve* (1900). The *Catalogue des livres, des documents, et des manuscrits de Henry Harriasse, bibliographe et historien de l'Amérique* (Paris, 1912) is most valuable. Consult also Henri Cordier, *Henry Harriasse* (ib., 1912).

HARROD, BENJAMIN MORGAN (1837-1912). An American engineer. He was born in New Orleans, La., and graduated from Harvard College in 1856. During the Civil War he was lieutenant of artillery and captain in the engineer corps of the Confederate army. He was chief State engineer of Louisiana in 1877-80, member of the United States Mississippi River Commission from 1879 to 1904, city engineer of New Orleans in 1888-92, and had charge of the city drainage system from 1895 to 1902. He served as a member of the Panama Canal Commission from 1904 to 1907.

HARRODSBURG. A city and the county seat of Mercer Co., Ky., 82 miles by rail southeast of Louisville, on the Southern Railway

(Map: Kentucky, F 4). It is a summer resort, visited for its mineral springs, and has a public library, an historical museum, and Beaumont College for women, opened in 1894. There are buggy factories, screen-door and window works, a large distillery, flour mills, planing mills, and other industrial establishments. Harrodsburg adopted the commission form of government in 1914. The water works and electric-light plant are owned and operated by the city. Pop., 1900, 2876; 1910, 3147. Harrodsburg was founded in June, 1774, by James Harrod, and is the oldest permanent settlement in the State. In 1776, when Kentucky was organized as Fincastle County of Virginia, Harrodsburg became the county seat. It was incorporated in 1875. Consult an article, "Kentucky's Pioneer Town," in *New England Magazine*, vol. xiii (Boston, 1891).

HARROGATE. A fashionable and exclusive inland watering place and municipal borough in the West Riding of Yorkshire, England, 18 miles north of Leeds (Map: England, E 2). Its importance dates from the discovery of its chalybeate, sulphur, and saline springs in 1596. The town consists of High and Low Harrogate, connected by rows of handsome residences encircling a public park of 200 acres known as the "Stray." The royal baths and springs, with their fine buildings, the electric-lighting plant, water works, markets, and a remunerative sewage farm are the property of the municipality, which maintains a free library, the Royal Spa concert rooms and gardens, winter garden, theatre, and recreation grounds. The sumptuous new baths (1897), erected at a cost of \$500,000, and the Kursaal (1903), costing \$350,000, also belong to the town. Pop., 1901, 28,400; 1911, 33,700. Consult Grainge, *History of Harrogate* (London, 1882).

HARROW (AS. *hearge*, Dutch *hark*; connected also with Icel. *hœrð*, harrow; possibly akin to Skt. *kharj*, to scratch). An agricultural implement, used for smoothing and pulverizing plowed land, for covering seeds, destroying weeds, and producing a dust mulch to conserve moisture. In its more common form it consists of a frame of a triangular, square, or rhombic form, in which are fixed rows of teeth, or tines, projecting downward. The harrow was in use before the dawn of history; but since only the lighter soils were cultivated in ancient times, it often consisted of bushes, or branches of trees, which merely scratched the ground. The square or oblong harrow derived from the Romans was the form most commonly used until late in the sixteenth century, and that and the triangular, or A, form are still used to some extent. In the various stages of its development the harrow has consisted of a wooden frame with wooden teeth, a wooden frame with iron teeth, or wholly of iron. The second is still used to a considerable extent, but iron harrows are most commonly employed. Modern harrows may be classed as (1) smoothing, (2) spring tooth, (3) curved knife and pulverizing, (4) disk. The disk harrow, which pulverizes the soil by a series of obliquely set revolving disks, represents, in its various modifications adapted to many different purposes, perhaps the highest development of the modern harrow.

HARROW. See HARROW-ON-THE-HILL.

HARROWBY, DUDLEY FRANCIS STUART RYDER, third EARL OF (1831-1900). An English politician, born at Brighton. He was educated

at Harrow and Oxford and took an Eastern sojourn, followed by military service at home during the Crimean War, but entered Parliament in 1856 for Lichfield, and while Viscount Sandon sat for Liverpool from 1868 to 1882. He succeeded to his father's title in 1882 and became prominent in matters relating to education and social reform brought before the House of Commons. Under the Conservative government he held such offices as President of the Board of Trade (1878-80) and Lord Privy Seal (1885-86).

HARROW-ON-THE-HILL. A town in Middlesex, England, 12 miles northwest of London (Map: London, C 4). Its celebrity is derived from its famous public school, Harrow ranking hardly second to Eton. The town is finely situated on a hill, 200 feet high, which is conspicuously crowned by the archaeologically interesting church of St. Mary with its lofty spire. This church, founded by Archbishop Lanfranc in the reign of William I, was rebuilt in the fourteenth century and has a view of 13 shires. Of late years Harrow has grown very considerably and has become a residential suburb of London. Pop., 1901, 10,200; 1911, 17,074. Consult Rimmer, *Rambles round Eton and Harrow* (London, 1892), and Bushall, *The Harrow Octocentenary Tracts* (Cambridge, 1894).

HARROW SCHOOL. One of the great public schools of England, founded in 1571 by John Lyon (q.v.). Its charter was granted by Elizabeth in the same year, and in 1590 the laws to govern its operation were duly framed by Lyon himself, but students were not admitted until the opening of the first building in 1611. Originally intended for the education of 30 poor youth from the parish of Harrow-on-the-Hill, its statutes nevertheless provided for the admission of "so many foreigners over and above the youth of the parish as the whole number may be well taught and the place can contain." The founder bequeathed two-thirds of his property for its maintenance, but the school did not thrive until 1660, when the head master availed himself of the statute admitting such as lived beyond the parish. This act assured its prosperity, though the enrollment has at times been very low. Now there are more than 600 in attendance, the majority being on the classical side. Long purely classical, the curriculum was extended by the introduction of mathematics in 1837, of modern languages in 1851, of English history and literature in 1869, and subsequently of drawing, music, and science. The school was formerly administered by six prominent parishioners, themselves empowered to fill any vacancies, but by the Public Schools Act of 1868, though the survivors of the old board remained, an additional six were elected, severally, by the Lord Chancellor, the universities of Cambridge, London, and Oxford, the Royal Society, and the undermasters. Students are admitted at the age of 12 to 14. Though free tuition was originally intended, there is now no gratuitous instruction, but the foundationers have some slight advantage of the foreigners in rates. The Lower School of John Lyon was established largely for the purpose of placating the residents of Harrow who objected that the school was not fulfilling the intentions of the founder in receiving only children of the wealthy classes. There are about six entrance scholarships, varying from £30 to £80, and the best of the exhibitions are the three by Baring, of a value of £100 each for five years, to Hertford College, Oxford. To the first build-

ing have been added a chapel (1839, replaced by another in 1857), the Vaughan Memorial Library (1861-63), and the hospital (1865). The Tercentenary Lyon Fund has provided a gymnasium, laboratories, and a new speech room (1877). Among the names associated with Harrow the most noteworthy are James Bruce, the African traveler, Charles Buller, Colonel Burnaby, Byron, Calverley, Theodore Hook, Sir William Jones, Cardinal Manning, Merivale, Palmerston, Dr. Parr, Sheridan, Archbishop Trench, Anthony Trollope, and Sir George Trevelyan. Consult: Rimmer, *Rambles round Eton and Harrow* (London, 1882); Thornton, *Harrow School and its Surroundings* (ib., 1885); *Harrow School Register, 1801-93* (ib., 1894); Minchin, *Old Harrow Days* (ib., 1898); Williams, *Harrow* (ib., 1901); Archibald Fox, *Harrow* (ib., 1911); G. T. Warner, *Harrow in Prose and Verse* (ib., 1913).

HARRY, BLIND. See HENRY THE MINSTREL.

HARRY AL'IS. The pseudonym of the French author Jules Hippolyte Percher.

HARRY LOREQUER. Charles Lever's first novel and one of his most successful works (1840).

HARSDÖRFFER, här's/dörf-fër, GEORG PHILIPP (1607-58). A German poet and scholar. He studied law at Altdorf and Strassburg and in 1644, with Johann Klaj, founded at Nuremberg a poetical society usually called the *Orden der Pegnitz Schöfer*, one of several societies established to promote the use of pure German. He was a prolific writer, publishing about 50 volumes in German and Latin. His style is ornate and artificial; his material shows strong influence of Italian and Spanish literature. His works include: *Frauensimmergesprächspiele* (8 vols., 2d ed., 1642-49), a sort of encyclopedia of curious knowledge in dialogue; *Nathan, Jotham, und Simson*, a collection of fables and allegories; and, his best-known work, *Poetischer Trichter, die deutsche Dicht- und Reimkunst, ohne Behuf der lateinischen Sprache in sechs Stunden einzugießen* (3 vols., 1647-50). Selections from his poems are in Müller, *Bibliothek deutscher Dichter des 17. Jahrhunderts* (Leipzig, 1826).

HARSHA, or SRI-HARSHA-DEVA. The name of a king of India, known also as Harshavardhana, or Harsha-Silāditya. He reigned over Thaneswar and Kanauj (606-648 A.D.) and was monarch of all northern India, as we know from the Chinese pilgrim Hiouen Tsaung (q.v.). He was a noted patron of literature and is named as the author of three Sanskrit dramas: the *Ratnāvalī*, or Pearl Necklace; the *Priyadarsikā*, or Lost Princess; and a play with a Buddhist plot, the *Nāgānanda*, or Joy of Serpents. The question of his actual authorship has often been discussed. It was under his royal favor that Bāna wrote the historical romance, in eight chapters, *Harsha-carita*, or *Adventures of Harsha*, translated into English by Cowell and Thomas (London, 1897). There are English, French, Italian, Swedish, and German translations of the three dramas: *Ratnāvalī*, by Wilson (London, 1871), Cimmino (Naples, 1894), Andersson (Vexjö, 1892), Fritze (Chemnitz, 1878); *Priyadarsikā*, by Strehly (Paris, 1888); *Nāgānanda*, by Boyd (London, 1872), Bergaigne (Paris, 1870), and Cimmino (Palermo, 1903). Consult also: S. Lévi, *Théâtre Indien* (Paris, 1890); Schuyler, *Bibliography of the Sanskrit Drama* (New York,

1906); Ettinghausen, *Harsha Vardhana* (Louvain, 1906); Macdonell, *History of Sanskrit Literature* (London, 1913).

HARSHBERGER, härsh'bërg-ër, JOHN WILLIAM (1869-). An American botanist, born in Philadelphia. He studied at Harvard University for a year, but graduated (B.S., 1892; Ph.D., 1893) from the University of Pennsylvania, where he was thereafter a member of the faculty, after 1911 as professor of botany. He lectured in 1904-06, had charge of nature study at the Pocono Pines Assembly in the summers of 1903-08, and was head of the work in ecology at the Marine Biological Laboratory at Cold Spring Harbor, L. I., in 1913. His writings include: *Maize, a Botanical and Economic Study* (1893); *The Botanists of Philadelphia and their Work* (1899); "A Phytogeographic Survey of North America" (1911), in the *Dic Vegetation der Erde* series; and also some 150 papers published in scientific journals.

HARSNETT, SAMUEL (1561-1631). An English ecclesiastic, Archbishop of York. Born in the parish of St. Botolph, Colchester, Essex, he was educated at Cambridge, and began his career as a preacher in 1584, with a sermon at St. Paul's Cross, London, directed so strongly against the doctrine of predestination that he was then and afterward accused of leaning towards popery. He was Archdeacon of Essex from 1602 until 1604, and the following year was made master of Pembroke Hall, Cambridge, Bishop of Chichester (1609), and of Norwich (1619). He was undoubtedly an extreme high churchman, most arbitrary in his dealings with the subordinate clergy and Puritan laity, but when summoned to appear before the House of Lords and refute the charges of Romanism brought against him, his defense was so eminently satisfactory that he was made Archbishop of York (1628). He is the author of *Considerations for the Better Settling of Church Government* (1629); *A Discovery of the Fraudulent Practices of John Darrell* (1599); and *Declaration of Egregious Popish Impostures, etc.* (1603).

HART (AS. heort, heorot, OIIG. hiruz, hirs, Ger. Hirsch, hart; connected with Lat. *ceruus*, Welsh *caric*, Lith. *kärve*, stag, OChurch Slav. *krava*, cow, Gk. *kepaós*, *keraos*, horned; also related to Lat. *cornu*, Ir., Welsh *corn*, Galatian *kápor*, *karnon*, horn, and to Gk. *képas*, *keras*, Skt. *srnga*, horn). A stag or male of the red deer, from the age of six years, when the crown, or *surroyal*, of the antler begins to appear. Great importance was formerly attached to the distinction of names proper to deer at different ages. See ANTILERS; DEER.

HART, ALBERT BURNELL (1854-). An American historian, born at Clarksville, Mercer Co., Pa. He prepared for college in Cleveland, Ohio, and in 1880 graduated at Harvard. He continued his historical studies in Paris, at the Ecole des Sciences Politiques, at the University of Berlin, and at Freiburg, where he received his Ph.D. degree in 1883. In the fall of that year he returned to America to accept an appointment as instructor at Harvard. A year later he became assistant professor, in 1897 professor of history, and in 1910 professor of government. He was president of the American Historical Association in 1909 and of the American Political Science Association in 1912 and was chairman of the executive committee of the National Municipal League in

1910. In 1914 he was appointed exchange professor at the University of Berlin. He identified himself particularly with the introduction and development of the method of studying history from the original sources, both in secondary schools and in colleges, and his influence has been felt throughout the United States. He was an editor of the *Harvard Graduates' Magazine* (1894-1902) and of the *American Historical Review* (1895-1909), and contributed frequently to magazines and reviews. He published: *Introduction to the Study of Federal Government* (1890); *Epoch Maps, Illustrating American History* (1891); *Formation of the Union* (1892, in "Epoch Series"); *Practical Essays on American Government* (1893); *Studies in American Education* (1895); *Revised Suggestions on the Study of History and Government of the United States* (1895); *Guide to the Study of American History*, with Edward Channing (1897; with Channing and F. J. Turner, 1912); *Life of Salmon P. Chase* (1897), in the "American Statesmen Series"; *Foundations of American Foreign Policy* (1901); *Actual Government* (1903); *Essentials of American History* (1905); *Slavery and Abolition* (1906); *National Ideals Historically Traced* (1907); *Manual of American History, Diplomacy, and Government* (1908); *Formation of the Union* (1910); *The Obvious Orient* (1911); *The Southern South* (1911); *The War in Europe* (1914). Professor Hart was editor of *American History Told by Contemporaries* (4 vols., 1898-1901); the *American Citizen Series* (7 vols., 1899-); *Source Readers in American History* (4 vols., 1901-08); *The American Nation* (7 vols., 1903-08); and joint editor of *American History Leaflets* (3 vols., 1913) and *Cyclopedia of American Government* (1910-14).

HART, CHARLES HENRY (1847-1918). An American author, born in Philadelphia. He was admitted to the bar in 1868 and graduated at the University of Pennsylvania the next spring. He practiced law until 1894, after which he gave his attention to literature and art. From 1882 to 1902 he was director of the Pennsylvania Academy of Fine Arts and in 1893 was chairman of the committee on retrospective American art at the World's Columbian Exposition. His numerous publications include: *Bibliographia Lincolniana*, reprinted under the title *Biographical Sketch of Abraham Lincoln* (1870); *Abraham Lincoln's Place in History* (1900); *Edward Savage, Painter and Engraver* (1905); *Who Was the Mother of Franklin's Son?* (1911); *Memoirs of the Life and Works of Jean Houdon* (1912), in collaboration with E. Biddle.

HART, ERNEST ABRAHAM (1835-98). An English physician and reformer, born of Jewish parentage at Knightsbridge, London. He became a student at St. George's Hospital, receiving part of his medical education at Lane's School of Medicine in Grosvenor Place, where he was appointed a demonstrator in his third year. He was admitted to the Royal College of Surgeons in 1856 and was house surgeon at St. Mary's Hospital after being associated with William Coulson in general practice. In 1860 he became surgeon to the West London Hospital, but returned to St. Mary's in 1863, first as ophthalmic, then as aural, surgeon, and finally as dean of the medical school.

In 1863 he became coeditor of the London *Lancet*, and in 1866 he was made the editor of the *British Medical Journal*, a position which he

filled until his death. He also edited the *Medical Record* from 1873 and the *Sanitary Record* from 1874. He was president of the Harveian Society of London in 1868 and 1893. Hart was, above all, a reformer. In 1854 he led the agitation which compelled the Admiralty to remove naval assistant surgeons from the cockpit to more fitting quarters, in 1888 he made strenuous efforts to ameliorate the position of military medical officers, and in 1892 he called attention to the grievances of Irish dispensary doctors. Sanitary reforms occupied him throughout all his life. His earliest sanitary investigations were carried out in connection with the *Lancet* commission for the nursing of the sick poor in the Metropolitan Workhouse infirmaries. His exposure in 1872 of the evils of the system of baby farming was instrumental in leading to the passage of an act for the protection of infant life. Coffee taverns, the National Health Society, and the abatement of the smoke nuisance in large towns had his strong support. In 1894 he engaged in a campaign against the system of barrack schools, where hundreds of pauper children were herded together till they became subject to chronic diseases and were drilled until they were little better than automata.

His most important publications include: *On Diphtheria* (1869); *On Some of the Forms of Diseases of the Eye* (1864); *A Manual of Public Health* (1874); *Hypnotism, Mesmerism, and the New Witchcraft* (1893 and 1896); *Essays on State Medicine* (1894). He also originated the series of biographies known as *Masters of Medicine*.

HART, HEINRICH (1855-1906). A German poet and critic, brother of Julius. He was born in Wesel and was educated in Münster, and began to write while yet a schoolboy. His poems *Wolffingsten* (1874) are so good that he is sometimes compared with Chatterton. In 1877 he went to Berlin and entered the field of literature. He was soon followed by his brother, who with him published *Die deutschen Monatsblätter*. They struggled to establish a genuine, national school of literature as opposed to the artificial, exotic product of the day. Their criticisms are superior to their poems. Among Heinrich's works may be mentioned: *Das Lied der Menschheit* (incomplete) (1888); *Erinnerungen 1880 bis 1900* (1900); in collaboration with Julius, *Kritische Waffengänge* (1882-84) and *Kritisches Jahrbuch* (1888). Consult Hanstein, *Das jüngste Deutschland* (Leipzig, 1900).

HART, JAMES MORGAN (1839-1916). An American philologist and educator, born at Princeton, N. J. He graduated at Princeton University in 1860, studied further at Göttingen, Germany, was assistant professor of modern languages at Cornell from 1868 to 1872, and held the chair of modern languages and English literature in 1876-90 at the University of Cincinnati, Ohio. In 1890 he returned to Cornell as professor of rhetoric and English philology. He became professor emeritus in 1907. His publications include translations from the German and French; very serviceable editions, with brief notes, of Goethe's *Hermann und Dorothea* (1875) and *Faust* (part i, 1878), and Schiller's *Piccolomini* (1875); an informing and interesting work on *German Universities* (1874); *A Handbook of English Composition* (1895); *Essentials of Prose Composition* (1901); and *The Development of Standard English Speech in Outline* (1907).

HART, JOEL (1810-77). An American sculptor. He was born in Clark Co., Ky., and received but little education. At the age of 20 he worked with a stonemason at Lexington, where he began to model busts in clay. The talent which he displayed in clay modeling attracted attention, as did especially his marble bust of Cassius M. Clay, and in 1849 he went to Florence to execute a commission for a statue of Henry Clay, given him by the Ladies' Clay Association of Virginia. His first model was lost during the voyage by shipwreck, and the statue itself, which is now in Richmond, Va., was not completed till 1859. Hart executed two other statues of the same statesman—one of marble, in the courthouse at Louisville, Ky., and a colossal bronze statue at New Orleans. He resided for the most part at Florence, producing many statues and busts. The most important of these are "Angelina," "Il Penseroso," and "Woman Triumphant," which his contemporaries among English critics pronounced one of the finest of modern works. Present-day criticism, however, considers him helpless with the human figure, although his busts are sometimes strong and characteristic, though heavy in execution. He also invented a mechanical device for obtaining the outlines of a head from life, the application of which gave some vogue to his portrait busts.

HART, JOHN (1714-79). A signer of the Declaration of Independence. He was born in Hopewell Township, Mercer Co., N. J., became a farmer, was elected to the Provincial Assembly of the State in 1761 and 1768, and served in the Continental Congress in 1774-76. He was chairman of the New Jersey Council of Safety in 1777-78. During the invasion of New Jersey by the British forces his farm was destroyed, and he was obliged to take refuge in the forests. He was elected to the first Assembly of New Jersey under the new constitution in 1770, and was reelected in 1777 and 1778.

HART, JOHN SEILEY (1810-77). An American educator. He was born in Stockbridge, Mass., graduated at Princeton in 1830, and four years later became adjunct professor of ancient languages there. From 1836 to 1841 he was in charge of the Edge Hill School, Princeton. He was principal of the Philadelphia Central High School from 1842 to 1859 and of the New Jersey State Normal School from 1863 to 1871. In 1872 he became professor of rhetoric and the English language at Princeton. In 1844 he established the *Pennsylvania Common School Journal*. He founded the *Sunday School Times* in 1859 and edited it until 1871, and for a time edited the publications of the Sunday School Union. He also prepared several textbooks, including a *Manual of Composition and Rhetoric* (1870); *Manual of English Literature* (1872); *Manual of American Literature* (1873).

HART, JULIUS (1859-). A German poet and critic. He was born at Münster and was educated there and at Berlin. In addition to translations from English, American, Spanish, and Persian poets, his publications include: *Sansara* (2d ed., 1887), poems; *Homo Sum* (1890), poems; *Don Juan Tenorio* (1881), a lyrical tragedy; *Der Sumpf* (1885), a tragedy; and, in collaboration with his brother Heinrich, *Die neue Gemeinschaft* (1901); *Geschichte der Weltliteratur und des Theaters* (1894-06). The last-mentioned work, profusely illustrated, embraces the history of literature from its earliest beginning to the present day.

HART, SIR ROBERT (1835-1911). A British inspector general and director of the Chinese Imperial Customs Service. He was born at Portadown, Armagh, Ireland, graduated from Queen's College, Belfast, in 1853, and in the next year entered the British consular service in China. In 1858 he was secretary to the Commission of the Allies at Canton and in the following year entered the Chinese Maritime Customs Service as a deputy commissioner. Advanced in 1863 to the post of inspector general, he reorganized the service practically on the lines on which it is now administered. He also organized in connection with the service a fleet of steamers for the suppression of piracy and smuggling and established a splendid system of lighting the coast. A fine postal system, which is now being extended to all parts of the country, was also inaugurated by him. In 1885, when Sir Harry Parkes, British Minister at Peking, died, Sir Robert was asked to succeed him; but, yielding to the entreaties of the Empress Dowager, he declined. He received the highest honors from the Chinese government, among them the Red Button and the decorations of the Double Dragon and the Peacock's Feather. His ancestors were ennobled for three generations, and after the settlement of the Boxer troubles he was appointed to high office in the Imperial government, and the whole Customs Department, native and foreign, was placed in his charge. In 1900 he had about 5000 men under his control, of whom about 900 were foreigners, all chosen and governed in accordance with the strictest civil-service rules. He was with the other foreigners in the British Legation when it was besieged by the Boxers and the Imperial troops. In 1906 much dissatisfaction was aroused by the course of the Chinese government in appointing two native superintendents of the customs to whom he was made a subordinate officer. He wrote "*These from the land of Sinim*": *Essays on the Chinese Question* (London, 1901). For his *Note on Chinese Matters*, dated June 30, 1869, and a discussion thereof, see F. W. Williams, *Anson Burlingame and the First Chinese Mission to Foreign Powers*, appendix iii (New York, 1912).

HART, SAMUEL (1845-). An American Protestant Episcopal clergyman, born at Saybrook, Conn. He graduated at Trinity College in 1866, after 1868 taught at that institution, and was made professor of Latin in 1883. He was ordained priest in 1870, and in 1893 he was elected Bishop of Vermont, but declined the office. In 1886 he became custodian of the *Standard Prayer-Book* of his church, and in 1892 secretary of the House of Bishops. In 1899 he became vice dean and professor of doctrinal theology and the Prayer-Book, and in 1908 dean, at the Berkeley Divinity School. He was elected president of the American Philological Association in 1901. He published editions of Juvenal (1873) and Persius (1875); edited Bishop Seabury's *Communion Office* (1874) and *Historical Sermons of Bishop Seabury* (1883-86); and wrote on *The Book of Common Prayer* (1910) and *Faith and the Faith* (the Bohlen lectures, 1914).

HART, WILLIAM (1823-94). An American landscape and animal painter. He was born in Paisley, Scotland, and was brought by his parents to Albany, N. Y., in 1831. Here he was apprenticed to a coach maker, for whom he painted carriage decorations. He then painted

portraits, and first exhibited at the National Academy in 1848. His work being favorably received, he went to Scotland in 1849, studying and painting for three years; on his return to New York he opened a studio, and was elected a member of the National Academy in 1858. In 1865 he was elected president of the Brooklyn Academy of Design, and he was also president of the American Society of Water-Colorists from 1870 to 1873. His art is in the manner of the Hudson River school (q.v.). He preferred landscapes bright in color, autumn or sunset scenes, nearly always with cattle. Among his principal works are: "Peace and Plenty" (1855); "Lake in the Hills" (1858); "White Mountains," owned by C. B. Warren, Philadelphia; "Joy of Autumn" (1865); "Golden Hour" (1872); "Keene Valley" (1875); "Jersey Cattle" (1879); "Hill-side Pasture" (1880); "Path by the River"; "Group of Cattle"; "After a Shower." He is represented in the Metropolitan Museum, New York, by "Scene at Napanoch" and "Adirondack Lake, Morning."

His brother and pupil, JAMES McDUGAL HART (1828-1901), landscape and animal painter, was born at Kilmarnock, Ayrshire, Scotland, and came to America in 1831. He studied also with Schirmer, at Düsseldorf, in 1851. He established a studio in New York and was elected member of the National Academy in 1859. His favorite subjects resemble his brother's, both in style and subject. Among his principal works are: "On the Croton"; "Sunmer on the Bouquet River"; "Morning in the Adirondacks"; "Summer Memory of Berkshire"; "Adirondacks" (1858). Walters collection, Baltimore; "Through Dust Clouds" (1879); "Princess Lily" (1882); "Boughs for Christmas"; "In the Old Orchard"; "Oaks in Autumn." Consult Tuckerman, *Book of the Artists* (New York, 1847).

HARTBEEST (Boer Dutch *hartbeest*, hart-beast, from *harte*, Dutch *hart*, hart + *beest*, beast). A large antelope of South Africa, the type of a genus (*Bubalis*, or *Alcelaphus*) containing several similar species, all African except one, the titel (see *BUBALIS*), which also inhabits Arabia and Syria. The genus is characterized by its long, pointed head terminating in a narrow muzzle, ringed, compressed, and often lyrate horns, and a comparatively short, cow-like tail. As is the case with most antelopes of the plains, the fore quarters are heavy and higher than the hind quarters, which are narrow and drooping. The reverse is the case with the bush bucks and others inhabiting a bushy or forested country.

The typical or common hartbeest (*Bubalis cama*) formerly ranged from Cape Colony to Mashonaland and gathered in great herds, but it has been slaughtered until now it is found only in remote regions. It stands about 4 feet high at the withers, and is grayish brown, with a yellowish patch on the buttocks and black markings on the face. The heavily ringed, divergent horns are bent sharply back at the tips. The animal was noted among hunters as one of the swiftest of African antelopes and easily distanced greyhounds. Near the Victoria Nyanza lives a similar but pale-faced species (*Bubalis jacksoni*). German and British East Africa and western Abyssinia are the home of three reddish species having widely expanding horns, and these are still fairly numerous there on the bushy plains. One is the red, or Coke's, hartbeest (*Bubalis cokei*), another the tora (*Bubalis*

tora), and the third Swayne's, or the "sig" (*Bubalis swaynei*). Sir H. Johnston found the first named extremely numerous in the plains about Kilimanjaro in 1885.

The konzi (*Bubalis lichtensteini*), of all the Zambezi region and Nyassaland; Hunter's hartbeest (*Bubalis hunteri*), of the Tana River valley, marked with a conspicuous white chevron on the forehead; the black-faced korrigum (*Bubalis senegalensis*), of the whole Sudan; and the large Tunisian hartbeest (*Bubalis major*), of the western Sahara, are allied species of the North. In South Africa there formerly ranged in great herds, and still sparingly exist, three other well-known species. One, the sassaby, or bastard hartbeest (*Bubalis lunata*), was one of the most numerous and well-known antelopes of the plains of Cape Colony and northward; it is about 3 feet, 10 inches high, and dark purplish red, nearly black, on the face and along the spine. Like all of this group, their flesh is excellent food. The blesbok (*Bubalis albifrons*) and bontebok (*Bubalis pygargus*) are smaller and remarkable for their brilliant purple-red color and white legs, and each has a white blaze on the face. In the bontebok this mark continues to the base of the horns, while in the blesbok it is divided by a dark crossbar between the eyes. For a general account, consult Lydekker, *The Game Animals of Africa* (London, 1908), and Roosevelt, *Life Histories of African Game Animals* (New York, 1914). See ANTELOPE, and Plate of ANTELOPES.

HART-DYKE, SIR WILLIAM (1837-). An English politician, born in Kent. He was educated at Harrow and at Christ Church, Oxford, entered Parliament in 1865 for West Kent, sat for the same constituency from 1868 to 1885, and for the Dartford Division of Kent from 1885 to 1906. He was a Conservative Whip (1868-74), Chief Secretary for Ireland (1885-86), and Vice President of the Council on Education (1887-92).

HARTE, HART, FRANCIS BRET (1839-1902). An American humorous poet and novelist, born at Albany, N. Y., Aug. 25, 1839. At 15 he wandered to California, where he spent three years digging for gold and teaching school. In 1857 he entered the office of the *Golden Era* as a compositor and presently began to write for that paper sketches which attracted favorable notice. He became its assistant editor and soon afterward editor in chief of the *Weekly Californian*, in which he published his parodies of novels. Meanwhile, from 1864 to 1867, he was secretary of the United States Mint in San Francisco and was writing for newspapers poems that won him great popularity, e.g., "The Society upon the Stanislaus." His *Condensed Novels* appeared in 1867. From 1868 till 1870 he edited the *Overland Monthly*, which he had helped to organize, and in it he published *The Luck of Roaring Camp* (1868) and *The Outcasts of Poker Flat* (1869)—perhaps his best short stories—and also many others. His most popular poem, "Plain Language from Truthful James," better known as "The Heathen Chinee," made Bret Harte famous in 1870. In this year he was made professor of recent literature in the University of California, but he went to New York in 1871 to continue writing. After 1878 he held consular appointments at Crefeld in Germany (1878-80), at Glasgow, Scotland (1880-85), and after 1885 he lived in England. During the last years of his life he had his

home near London, and a new volume, chiefly of short stories, appeared nearly every year. He died in Camberley, near London, May 5, 1902.

Of those American authors whose charm lies mainly in their manner of emphasizing the characteristics of a highly flavored community, Bret Harte is one of the best. He was open-eyed and sympathetic in his delineation of adventurers. His story of the gambler who sacrificed himself for his snow-bound companions bears witness to Harte's first-hand acquaintance with perverse humanity. All his strongest tales of the Forty-niners and of their followers give a view of early California that, in spite of an exaggeration perceptible to contemporary Californians, supplies an interesting supplement to formal history. Whether he tells of the rough Caucasian or of the mysterious Asiatic, Bret Harte has the knack of catching representative traits so admirably that we can see the whole of an almost lawless society. The stuff of his stories was romantic, melodramatic, and mostly disreputable. He handled it with humor, irony, pathos, or with a cynical lack of a superior point of view. In method he was realistic. He was imaginative in that he could cull the essence of things, but he was neither a dreamer nor a thinker. What was close to him he saw marvelously, and few writers have ever given a more distinct impression of being a part of what they have described. To Dickens he owed much, yet Bret Harte is as impersonal as Maupassant. He assumes no responsibility, preaches no sermon, for his whole mind is absorbed in the portrayal of facts. The facts he coördinates with the genius of a born story-writer. Visible physical nature, wild cañons and mountains furnish him a setting. But Bret Harte admits nature only as a background. He loves the dazzling, the spectacular, and the dreadful in his *dramatis personæ*, and delights in laying bare to the eyes of the astonished reader elements of heroism in the sorriest human types—the gambler, the desperado, the adventurer, or the bedraggled woman. And these characters constitute a gallery of vagrants, sordid unfortunates, or downright rogues. Bret Harte wrote and wrote abundantly till the end. In his early work one may feel a quick intelligence, keenly interested in a new world. He is, through his subjects, and perhaps through his manner, an American author otherwise than by mere birth. His American qualities endeared him not only to his readers at home, but to many in Europe, for Europeans found in him an artistic portrayal of a phase of American life.

Most of Bret Harte's stories and poems depict life on the Pacific slope in the early days, but he describes life also in the Atlantic States and in England. Notable among his works, most of them published in London as well as in America, are: *Condensed Novels* (1867); *The Luck of Roaring Camp and Other Sketches* (1870); *Poems and East and West Poems* (1871); *Poetical Works* (1872); *Tales of the Argonauts* (1875); *Gabriel Conroy* (1876); *The Story of a Mine* (1878); *The Twins of Table Mountain* (1879); *Flip* (1882); *In the Carquinez Woods* (1884); *On the Frontier* (1884); *Snow-Bound at Eagle's* (1885); *A Millionaire of Rough and Ready* (1887); *The Argonauts of North Liberty* (1888); *A Sappho of Green Springs* (1891); *Sally Dows and Other Stories* (1893); *In a Hollow of the Hills* (1895); *Clarence* (1895); *Three Partners* (1897); *From Sandhill to Pine* (1900); *Under*

the Redwoods (1901); and *Stories, Poems, and Other Uncollected Writings of Bret Harte* (1914), compiled by C. M. Kozlay. Consult: Pemberton, *Life of Bret Harte* (New York, 1903); Boynton, *Bret Harte* (ib., 1903); Merwin, *Life of Bret Harte* (ib., 1911).

HARTE, RICHARD HICKMAN (1855–). An American surgeon. Born at Rock Island, Ill., in 1878 he graduated M.D. from the University of Pennsylvania, where he was appointed associate professor of surgery in 1902. He served as surgeon of a number of Philadelphia hospitals, was a president of the Philadelphia Academy of Surgery, and in 1910–11 was president of the American Surgical Association, whose *Transactions* he had edited for nine years. He contributed to surgical journals and is author of a *Hand-Book of Local Therapeutics* (1893).

HARTE, WALTER (1709–74). An English poet and historian. Educated at Marlborough and Oxford, he entered the Church, was preacher and teacher at his alma mater, and became vice principal of St. Mary Hall. His first poems, published at the age of 18, brought him the notice of Pope, whose staunch friend he afterward became, and also his imitator in an *Essay on Reason* (1735). From 1745 to 1749 he was traveling tutor to the recipient of the famous Chesterfield Letters, and on his home-coming was made canon at Windsor and afterward rector in a Cornwall parish. His most pretentious work, the *Life of Gustavus Adolphus* (2 vols., 1759), was a mine of information. He wrote also *Essays on Husbandry* (1764), approved by both Lord Chesterfield and Dr. Johnson; and he was responsible for a number of religious poems.

HARTEBEEST. See **HARTBEEST**.

HARTEL, hārt'el, WILHELM VON (1830–1907). An Austrian classical scholar. He was born at Hof in Moravia and studied at Prague and at the University of Vienna. He was appointed professor of classical philology at Vienna in 1872, made a member of the Vienna Academy in 1875 and of the Berlin Academy in 1893, and became a life member of the Austrian House of Peers in 1890. In 1899 he was for a short time Minister of Education and Public Worship, to which post he was reappointed in 1900, holding office until 1905. His principal works are: *Homeric Studien* (1871; 2d ed., 1873); *Demosthenische Studien* (1877–78); *Studien über attisches Staatsrecht und Urkundenwesen* (1878); and various editions of classical authors, including the *Breviarium of Eutropius* (1872); Cyprian's *Opera Omnia* (3 vols., 1868–71); and Ennodius' "Opera" for the *Corpus Scriptorum Ecclesiasticorum*, published by the Vienna Academy of Sciences. He wrote especially on the prosody of Homer and on the use and neglect of the digamma in the *Iliad* and the *Odyssey* and worked also with distinction in the field of Greek epigraphy. He was made editor of the *Zeitschrift für Österreichische Gymnasien* in 1874 and with Schenkl founded the *Wiener Studien* in 1879. Consult Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

HARTENSTEIN, hārt'en-stin, GUSTAV (1808–90). A German philosopher and author, born at Plauen, Saxony, and educated at Grimma and Leipzig, where in 1834 he was appointed assistant and in 1836 full professor of philosophy.

CAPITOL

CONNECTICUT CAPITOL AT HARTFORD; SOLDIERS' MEMORIAL ARCH ON LEFT

He was one of the most gifted followers of Herbart, to whose philosophical views he gave wide extension in the works entitled *Die Probleme und Grundlehren der allgemeinen Metaphysik* (1836) and *Die Grundbegriffe der ethischen Wissenschaften* (1844).

HARTFORD. A city and port of entry, the capital of Connecticut, and the county seat of Hartford County, 125 miles west by south of Boston, 36 miles north-northeast of New Haven, and 110 miles northeast of New York, on the New York, New Haven, and Hartford and the Central of New England railroads (Map: Connecticut, E 2). It is situated at the head of navigation for large vessels on the Connecticut River, 50 miles from Long Island Sound, and at the mouth of Park River, a narrow stream that flows through the city, being crossed by several bridges. Hartford has a fine site, its more elevated sections commanding splendid views of the Connecticut valley, and is regularly laid out over an area of about 17 square miles. Much historical interest attaches to the city, the memory of its prominence in Colonial as well as in later times being preserved in several of its churches and houses, in its localities, and in its interesting collections of relics. The old State House (1796), in which the Hartford Convention (q.v.) met, now serves as the city hall; and the Capitol, costing \$2,532,000, is a large and beautiful structure of white marble, with portraits and statues of famous persons. Several of the life and fire insurance companies for which Hartford is noted occupy fine offices, and among other pretentious buildings are the new municipal building (costing \$1,400,000), the high school, Young Men's Christian Association building, State arsenal, post office, Wadsworth Athenaeum, Junius Spencer Morgan Memorial, the Colt Memorial and the church of the Good Shepherd, both erected by the late Mrs. Samuel Colt, and St. Joseph's Cathedral, the seat of the Bishop (Roman Catholic) of Hartford. Among the charitable institutions are the Tuberculosis, Hartford, City, and St. Francis hospitals, Hartford Orphan Asylum, Old People's Home, Retreat for the Insane, American Asylum for the Deaf and Dumb, the Church Home (Episcopal), and Asylum for the Blind. Hartford is the seat of Trinity College (q.v.), established in 1828, and of the Hartford Theological Seminary (Congregational), founded in 1834. Besides the libraries of the educational institutions mentioned above, there are the State, Public, Watkinson, and Historical Society libraries, aggregating more than 160,000 volumes. The city has a number of parks: Bushnell Park (46 acres), the site of the State Capitol, and Charter Oak Park, famous for its fair grounds and trotting track; also Keney, Elizabeth, Pope, Riverside, Goodwin, Colt, and other parks.

In 1887 Hartford was made a port of entry. The city has considerable commercial importance, but is most widely known as the centre of vast insurance interests and for its manufacturing concerns. The principal manufactures are electrical appliances, firearms, typewriters, screws, nails, pins, envelopes, steam boilers and engines, machinery, printing presses, car wheels, hosiery, knit goods, furniture, carriages, instruments of precision, motor vehicles, etc. The city also controls an extensive trade in Connecticut tobacco. The government, as provided by the charter of 1850, revised in 1914 to go

into effect in 1915, is vested in a mayor, elected biennially, and a board of 20 aldermen, with subordinate administrative officials. The government is largely by commissions appointed by the mayor. The park commissioners make appointments to fill vacancies on their own board. The city owns and manages its water works, the earnings from which will pay off the water debt when due. The Nepaug system, now being built, will give the city a supply of water which will last for 50 years. The net debt of the city in 1914 was \$5,775,000. The city maintains evening high and common schools, with technical and manual training. The receipts of the city in 1912 amounted to \$4,575,000, while the payments were \$4,731,074, chief items of expense being \$190,000 for police, \$243,000 for fire, \$626,000 for education, and \$91,000 for the water system. Pop., 1800, 5347; 1850, 17,966; 1870, 37,180; 1890, 53,230; 1900, 77,850; 1910, 98,915; 1914 (U. S. est.), 107,038; 1920, 138,036.

In 1624 the Dutch established a trading post on what is still known as Dutch Point and in 1633 erected a fort which they called the House of Hope. A number of Massachusetts colonists, mostly from Newtown (Cambridge), left their homes in 1635 and 1636, partly because of a dispute over the civil rights of non-church members, and, led by their pastors, Thomas Hooker (q.v.) and Samuel Stone, settled at Hartford. The name "Newtown" was at first adopted, but in 1637 it was discarded for "Hartford"—Hertford, England, being the birthplace of Stone. On Jan. 14, 1639, the freemen of Windsor, Hartford, and Wethersfield met at Hartford and, influenced by Hooker, adopted the famous "Fundamental Orders of Connecticut," the first written constitution adopted by a people that ever organized a government. For this reason Hartford is frequently called the "birthplace of American democracy." On Sept. 19, 1650, Peter Stuyvesant and commissioners from the "United Colonies" signed a treaty at Hartford by which boundary disputes were adjusted, and the Dutch confirmed in possession of their fort. In 1654, however, this fort was seized, and the Dutch expelled from Connecticut. In 1687 Governor Andros came to Hartford and made an attempt to seize the Connecticut charter. (See CHARTER OAK.) Washington and Rochambeau met here in 1780 to plan the Yorktown campaign, and in 1814-15 the Hartford Convention (q.v.) was in session here. From the union of the New Haven and Connecticut Colonies in 1644 until 1701 Hartford was the capital of Connecticut; from 1701 to 1873 it shared that honor with New Haven; and since 1875 it has been sole capital. Noah Webster, Henry Barnard, John Fiske, Richard Burton, and Frederick Law Olmsted were born in Hartford, and among the notable writers who have made it their home are Harriet Beecher Stowe, Whittier, Lydia Huntley Sigourney, John Trumbull, Joel Barlow, Horace Bushnell, Charles Dudley Warner, and Samuel L. Clemens (Mark Twain). Consult: *Scæva* (pseud.), *Hartford in the Olden Time: Its First Thirty Years* (Hartford, 1853); Trumbull, *The Memorial History of Hartford County* (Boston, 1886); W. I. Twitchell, *Hartford in History* (Hartford, 1899); and sketches in Powell, *Historic Towns of the New England States* (New York, 1898), and *Connecticut Magazine*, vol. v (Hartford, 1899).

HARTFORD. A town in Windsor Co., Vt., about 70 miles northwest of Concord, on the

Woodstock and the Central Vermont railroads (Map: Vermont, D 6). It contains three public libraries and has manufactures of woollens, paper, etc. Pop., 1900, 3817; 1910, 4179.

HARTFORD. A city in Washington Co., Wis., 37 miles northwest of Milwaukee, on the Chicago, Milwaukee, and St. Paul Railroad (Map: Wisconsin, E 5). It is in a farming and dairying country and has tanneries, knitting mills, malt houses, automobile works, etc. Near here is Holy Hill, a well-known Catholic monastery, which is under the management of the Carmelite Fathers. Hartford owns its water works, electric-light and sewer plants. Pop., 1900, 1632; 1910, 2982.

HARTFORD, THE. The flagship in which Admiral Farragut made his attack on New Orleans, in April, 1862. She was also his flagship in the attack on Mobile.

HARTFORD CITY. A city and the county seat of Blackford Co., Ind., 47 miles west by south of Fort Wayne, on the Lake Erie and Western and the Pittsburgh, Cincinnati, Chicago, and St. Louis railroads (Map: Indiana, (1 4). It has some natural gas and a steady supply of oil; there are manufactures of paper and pulp, tile, brick, buggies, machines, and various glass articles. The water works are owned and operated by the municipality. Pop., 1900, 5912; 1910, 6187.

HARTFORD CONVENTION. In American history, a political assembly representing the Federalists of the New England States, which met at Hartford, Conn., Dec. 15, 1814, and adjourned sine die, Jan. 5, 1815. Its members numbered 26, 12 coming from Massachusetts, 7 from Connecticut, 4 from Rhode Island (all appointed by the Legislatures of their respective States), 2 from counties in New Hampshire, and 1 from Windham Co., Vt. The convention grew out of the opposition of the Federalists in New England to the War of 1812 and to the Embargo Acts which wrought injury to New England's commerce, and its members all belonged to that party. George Cabot, of Massachusetts, was elected president, and Theodore Dwight, of Connecticut, secretary. The members were as intelligent and as high-minded men as could have been found in the country, but Federalism was exceedingly unpopular, and the fact that the sessions were held with closed doors, and that the members were pledged to secrecy, gave rise to a report that the secession of the New England States was contemplated. The extreme stand thus attributed to the leading Federalists (q.v.), as well as their pronounced opposition to the war, hastened the movement which resulted in the complete overthrow of the Federalist party. The object of the convention was to devise means not only of security and defense against foreign nations, but also for safeguarding the privileges of the separate States against the alleged encroachments of the Federal government; and no treasonable intention could be proved. The act of Massachusetts calling the convention stated that the steps taken by the consulting body were to be "not repugnant to their obligations as members of the Union," and the resolutions of Connecticut and Rhode Island were to the same effect. The main propositions were stated in the form of amendments to the Federal Constitution, which the convention recommended to the several States. The suggested changes were that direct taxes and representatives be apportioned among

the States according to the number of free persons therein; that no new State should be admitted to the Union except upon a two-thirds vote in each House of Congress; that Congress should have no power to lay an embargo on ships of American citizens for more than 60 days; that Congress should not interdict foreign commerce or declare offensive war except by a two-thirds vote; that no person thereafter naturalized should be capable of sitting in Congress or of holding any Federal civil office; that no person should serve as President more than one term; and that the President should never be chosen twice successively from the same State. The delegates further resolved that, if their recommendations should not be heeded and if the defense of their respective States should still be neglected, a further convention should be created "with such powers and instructions as the exigency of a crisis so momentous may require." The legislatures of Massachusetts and Connecticut approved of these proposed amendments and sent commissioners to Washington to urge their adoption.

The war, however, was practically over before the convention finished its work, the Treaty of Ghent (q.v.) having been concluded on December 24, though the fact was unknown to the members of the convention. The battle of New Orleans, Jan. 8, 1815, and the ratification of the Treaty of Ghent (February 17) increased the popularity of the government and hastened the downfall of the Federalist party; and "Hartford Convention Federalist" was for many years a term of reproach. The controversy over the absolute obligation of a governor to respond to the President's call for the militia presented a problem in constitutional law, and in the relations of the States to the Union, which was not fully settled even at the outbreak of the Civil War. For an authoritative and complete work, consult the *History of the Hartford Convention* (New York, 1833), by Theodore Dwight, secretary of the convention; also consult Lodge, *Life and Letters of George Cabot* (Boston, 1877), and Henry Adams, *Documents Relating to New England Federalism* (ib., 1877). See **FEDERALISTS**.

HARTFORD THEOLOGICAL SEMINARY. Originally founded, 1834, at East Windsor Hill, Conn., as The Theological Institute of Connecticut, it was removed to Hartford in 1865 with change of name and rapidly passed through important developments. Mainly under the inspiring leadership of Prof. Chester D. Hartman, who became the first official "president," the seminary entered the rank of the leading American theological institutions and was one of the pioneers in the reconstruction of theological education. In 1902 affiliation was made with the Hartford School of Religious Pedagogy, which led to wider conceptions of ministerial training. In 1911 the department of missions, which had existed for many years, was formed into a school of missions, which in 1912 became the Kennedy School of Missions, in memory of the late John Stewart Kennedy, of New York. In April, 1913, a new charter was granted by the State of Connecticut which provided for the operation of the three schools named above, and any other schools of training for religious service which the board of trustees might decide to establish, under the corporate name of The Hartford Seminary Foundation. The splendid Newton Case Memorial Library, undoubtedly

one of the greatest theological libraries in America, contains over 100,000 volumes and nearly 60,000 pamphlets, and includes important collections in Arabic, Indian, Chinese, and Japanese. The main buildings are Hosmer Hall (1870) and Case Memorial Library (1892). In October, 1914, the Theological Seminary had 14 professors, 76 students; the School of Religious Pedagogy, 5 professors, 62 students; the Kennedy School of Missions, 5 professors, 37 students. These lists do not include the instructors and lecturers and correspondence students.

HARTIG, hār'tik, FRANZ, COUNT (1789-1865). An Austrian statesman. He held a number of important posts under the government, having been the Governor of a province and Finance Minister in the royal cabinet. The appearance of his book, *Genesis der Revolution in Oesterreich* (3d ed., 1851), describing the beginning of the liberal movement in Austria, forced him into retirement. In 1860 he was elected to the Reichsrat, where he played a prominent part as a member of the Liberal Centralist party. In 1861 he was called to the Austrian House of Lords, of which he remained a member until his death.

HARTIG, GEORG LUDWIG (1764-1837). A German forester. He was born at Gladenbach, and in 1781-83 studied at the University of Gießen. Entering, in 1786, the service of Prince Solms-Braunfeld at Hungen, he founded a school of forestry which became the model for future institutions of this kind. In 1806 he went, as chief inspector of forests, to Stuttgart and in 1811 was appointed chief of the department of forestry at Berlin. It was due to his firmness that a large part of German wooded territory was not sacrificed to meet the financial exigencies of the time. He wrote in all 31 works, such as: *Anweisung zur Holzzucht für Förster* (8th ed., 1818); *Lehrbuch für Förster* (11th ed., 1877); *Lehrbuch für Jäger* (11th ed., 1884); *Kubiktabellen* (10th ed., 1871).

HARTIG, ROBERT (1839-1901). A writer on forestry, born at Brunswick, a son of Theodor Hartig (q.v.), and educated at the Collegium Carolinum, of Brunswick, and at Berlin. In 1878 he was appointed professor of forest botany at Munich. The scientific labors of Hartig in the department of vegetable pathology have contributed greatly to the development of that branch of science. Prior to his investigations on the progressive stages of disease in trees, little or nothing had been done in this department of scientific inquiry; so that Hartig may be considered the founder of arboreal pathology. His more important works include: *Die anatomischen Unterscheidungsmerkmale der wichtigsten in Deutschland wachsenden Hölzer* (1879; 4th ed., 1898); *Lehrbuch der Baumkrankheiten* (1882; 3d ed., 1900; Eng. trans. by W. Somerville, 1894). In this work the author reviews the development of the study of vegetable pathology; the causes of vegetable disease; the injuries induced by such plants as cryptogams, fungi, and phanerogams; and wounds, and diseases due to conditions of the soil. He also wrote *Die Zerstörungen des Bauholzes* (1885; 2d ed., 1902).

HARTIG, THEODOR (1805-80). A German forester and naturalist. He was born at Dillenburg, was educated at Berlin (1824-27), and was successively lecturer and professor of forestry at the University of Berlin (1831-38) and at the Carolinum, Brunswick. His works include: *Die Aderflügler Deutschlands* (1837; 2d

ed., 1860); *Vergleichende Untersuchungen über den Ertrag der Rotbuche* (1847; 2d ed., 1851). In collaboration with his father, Georg Ludwig Hartig, he also published the work entitled *Förstliches und naturwissenschaftliches Konversationslexikon*. The eleventh edition of his father's *Lehrbuch für Förster*, the later reprints of which he had revised, was published in 1877.

HARTINGTON. A city and the county seat of Cedar Co., Neb., 60 miles northwest of Sioux City, Iowa, on the Chicago, St. Paul, Minneapolis, and Omaha Railroad (Map: Nebraska, G 2). It is the centre of a farming and stock-raising district and has some manufactures. The water works and gas plant are owned by the city. Pop., 1900, 971; 1910, 1413.

HARTINGTON, MARQUIS OF. See DEVONSHIRE, eighth DUKE OF.

HARTLAND, EDWIN SIDNEY (1848-). An English folklorist, born in Islington and educated at Bristol. He was a solicitor in Swansea from 1872 to 1890, became registrar of the county court, Gloucester, and in 1902 was mayor of Gloucester. In 1906 he was president of the anthropological section of the British Association. His valuable works on folk tales and allied subjects include: *English Fairy and Other Folk-Tales* (1890); *The Science of Fairy Tales* (1890); *The Legend of Perseus* (3 vols., 1894-96); *Primitive Paternity* (2 vols., 1909-10).

HARTLAUB, hār't'laup, GUSTAV (1814-1900). A German ornithologist, born in Bremen, and educated at Berlin, Bonn, and Göttingen. In addition to his contributions on ornithology to Troschel's *Archiv der Naturgeschichte* during a period extending from 1846 to 1871, he published several valuable scientific works, chiefly on the birds of Africa. These include: *System der Ornithologie Westafrikas* (1857); *Beitrag zur Fauna Centralpolynesiens* (jointly with Finsch, 1867); "Die Vögel Ostafrikas" (also with Finsch, in vol. iv of Deeken's *Reisen in Ostafrika*, 1870); *Die Vögel Madagaskars und der benachbarten Inselgruppen* (1876).

HARTLEBEN, hār't'la'bən, OTTO ERICH (1864-1905). A German dramatist, born in Clausthal. He studied law at Berlin, Tübingen, and Leipzig, but gave up law work as early as 1890 to devote himself to literature in Berlin and Munich. He wrote dramas, tales, and lyrics, but is best known for his comedies, whose sunny humor is tinged only now and then with satire. Among his most successful plays are: *Angele* (1891); *Der Frosch: Familiendrama nach Henrik Ipse* (1891), a parody; *Hanna Jagent* (1893); *Die sitiliche Forderung* (1897), a parody of Sudermann's *Heimat*; *Ein wahrhaft guter Mensch* (1899); the cycle of one-act plays, *Die Befreiten* (1899); and finally his tragedy *Rosenmontag* (1900), which won the Grillparzer prize.

HARTLEPOOL, hār't'l-pool, or EAST HARTLEPOOL. An ancient seaport, market town, and municipal borough, in Durham County, England, on a small peninsula in the North Sea, 18 miles east-southeast of Durham (Map: England, E 2). Sea fisheries, iron shipbuilding, marine engineering, cement manufacture, and coal trade are its chief industries. Its principal buildings are the borough hall and St. Hilda's Church of the thirteenth century, with its lofty embattled tower. Its lighthouse is visible 15 miles. A substantial sea wall and esplanade are attractive features on the seaward side. The town maintains a ceme-

tery, markets, and a free public library. The town and port are practically one with West Hartlepool (q.v.). Pop., 1901, 22,732; 1911, 20,618. It was an important harbor in 1171, and its first charter was granted by King John. The port was bombarded by the Germans during the War of 1914, in which a number of lives were lost. See WAR IN EUROPE.

HARTLEPOOLS, THE. A parliamentary borough and port of Durham County, England, comprising the municipalities of Hartlepool (q.v.) and its extension, West Hartlepool (q.v.).

HARTLEY, SIR CHARLES AUGUSTUS (1825-1915). An English engineer and railroad builder. He served through the Crimean War as captain of engineers in the Turkish contingent (1855-56), was engineer in chief of the European Commission of the Danube from 1856 to 1907, and in 1862 was knighted. In 1867 he drew up plans for the enlargement of the harbor of Odessa and won with them the competitive prize of 8000 silver rubles offered by the Emperor of Russia. In 1875 he was a member of the board of engineers appointed by the President of the United States to report on the practicability of J. B. Eads's plan for improving the south pass of the Mississippi River by means of jetties. He was a member of the congress which sat at Paris in 1879 to decide on the best route for a ship canal across the Isthmus of Panama and served the British government as a member of the International Technical Commission on the Suez Canal in 1884-1907. As a consulting engineer, he was employed by several governments, notably on the harbor and river improvements of the Hugli, the harbor of Trieste, the Nile Barrage below Cairo, and the harbor of Varna. He received numerous decorations at home and abroad. Among his published works are: *Delta of the Danube* (1874); *Public Works in the United States and Canada*; *Inland Navigation in Europe*; *History of the Engineering Works of the Suez Canal*; *Port Natal* (1897-1903), two reports, with Sir J. Wolfe Barry.

HARTLEY, DAVID (1705-57). A celebrated English philosopher. His father was vicar of Armley in Yorkshire. At 15 he entered Jesus College, Cambridge, and afterward became a fellow of the college. He studied at first for the Church, but dissented from some points in the Articles, and in consequence had to abandon his original intention. He finally chose the profession of medicine, in which he attained considerable eminence. He practiced as a physician successively in Newark, Bury St. Edmunds, London, and Bath, where he died. His chief work, entitled *Observations on Man, his Frame, his Duty, and his Expectations*, was begun when he was about 25 and occupied him for 16 years. It was published in 1749 and was translated into French and German. The first part relates to the constitution of the human mind and is the really important and original part. The second part treats of religion and morals.

His handling of the mind turns throughout upon two theories. The first is called the doctrine of vibrations, or a theory of nervous action analogous to the propagation of sound, the suggestion of which he owed to Newton, of whose writings he was a student. The second theory was that the higher activities of the mind might be explained to a very wide extent by the principle of the association of ideas (see ASSOCIATION OF IDEAS)—a principle far from new in his statement of it, but never before appreciated in any-

thing like the range of its bearings upon the phenomena of mind.

The doctrine of vibrations supposed that when any one of the senses was affected by an outward object, the effect was to set the particles of the nerve in a vibratory motion, which ran along to the brain and produced corresponding vibrations in the cerebral substance. In like manner, when an active impulse proceeded outward to the muscles, the manner of communication along the nerves was of the same kind. He even extended these molecular vibrations to the other tissues. All conscious processes were regarded as having physiological correlations in brain processes. The opposition that immediately manifested itself against this part of Hartley's speculations arose from a mistaken notion that it favored materialism.

As regards the second doctrine of Hartley, the doctrine of association, he is often regarded as the founder of the English school of association, although thinkers before him, among whom were Locke and Hume, had used the principle of association to explain many of the more developed mental contents. Hartley maintains that it is involved in the conversion of our sensations into ideas, and also in the first origin of voluntary power, which he regards as essentially an acquired power. He then treats of the commonly recognized intellectual faculties, memory, imagination, reason, etc. Lastly, the emotions, which he classifies under six heads—imaginative emotions, ambition, self-interest, sympathy, theopathy (the religious sentiment), and the moral sense—may, according to him, be readily seen to be the products of association of certain elementary feelings that unite among themselves and pass into new connections and give birth to complex feelings, under the general law. Many of those explanations would be considered now as faulty or defective; but at the time Hartley's attempt was a great step in advance. In logic he seems to have been the forerunner of the algebraical theory of that science. In addition to the work mentioned above, Hartley published in 1746 *Conjectura Quorundam de Motu, Sensus et Idearum Generatione*. A biography by his son appeared in the 1791 edition of *Observations*. Consult Bower, *Hartley and James Mill* (London, 1881), and Schönkank, *Hartley und Priestley, die Begründer des Associationismus in England* (Halle, 1882). Consult also the standard histories of philosophy.

HARTLEY, DAVID (1732-1813). An English politician. He studied at Corpus Christi College, Oxford, and afterward entered politics as a Liberal. Among his friends was Benjamin Franklin, whom he met during Franklin's stay in London, and with whom after his departure began a correspondence which continued through the years of the Revolution. He strongly opposed the policy of Lord North's ministry in forcing a war with America and labored to effect an exchange of prisoners, believing that any amelioration of hardships or acts of generosity would tend to lessen the bitter feelings of the combatants. He was a zealous supporter of Rockingham; and this, together with his friendship for Franklin, probably led to his selection as plenipotentiary to sign the treaty of peace with the United States (Paris, Sept. 3, 1783). His writings were nearly all of a political character: *The Budget, Inscribed to the Man who Thinks Himself Minister* (London, 1764); *The Wallet, a Supplementary Exposition of the*

Budget, Inscribed to the Man Who Knows Himself Minister (1764); *Letters on the American War* (1778); "Two Letters from David Hartley, Esq., M.P.," in *Tracts Concerning County Petitions* (1780); *An Address to the Committee of Association of the County of York* (1781). Consult: *Memoirs of Sir Nathaniel William Wraswail, 1772-84* (5 vols., London, 1883); *The Complete Works of Benjamin Franklin*, edited by John Bigelow (New York, 1887-88); Hale, *Franklin in France* (Boston, 1888).

HARTLEY, JONATHAN SCOTT (1840-1912). An American sculptor. He was born in Albany, N. Y., and after working for some time in the studio of E. D. Palmer he spent three years in the schools of the Royal Academy, London, then studied for short periods in Germany, Italy, and Paris, and settled in New York in 1875. He was elected a member of the National Academy of Design (1891) and of the National Sculpture Society. From 1876 to 1884 he was professor in the Art Students' League and from 1879 to 1889 president. Hartley is best known for his portrait busts, executed with much technical skill and remarkable power of characterization. Good examples are: John Gilbert as Sir Peter Teazle (*Players' Club*, New York); Felix Morris as the Marquis in "A Game of Cards," George Innes (1900), Victor Semper (1908), and Otis Skinner as Colonel Philippe Bridau (1908). Among his public works are: Miles Morgan (Springfield, Mass., 1882); the Daguerre Monument (Washington, D. C.); statues of Ericsson and Alfred the Great (both in New York, the latter on the Appellate Court building); statue of Thomas K. Beecher (1901, Elmira, N. Y.); and the relief on the monument at Saratoga commemorating the defeat of Burgoyne. In later years Hartley produced a number of ideal and genre subjects, such as: "Nature's Sun Dial" (1907); "Fisher-man's Luck," "The Joy of Life," "Music" (all in 1910); "Young Hopi Stick Thrower" (1911); "The Cradle of Pan" (1912).

HARTLIB, SAMUEL (c.1600-c.1670). An English social reformer. He was born at Elbing, West Prussia, of Polish ancestry, and went to London in 1628. He is said to have introduced the earlier writings of Comenius into England (1637 and 1639) and to have taken an active part in the movement for the unification of the various Protestant sects. He was an intimate friend of Milton and is said to have been very charitable. His publications, which are devoted chiefly to educational and economic reforms, include: *Considerations Tending to the Happy Accomplishment of England's Reformation in Church and State* (submitted to Parliament in 1647); *Mucaria* (1641), containing the outlines of an ideal state; *The Reformed Husbandman* (1651).

HARTMANN, HIRTMAN, JAKOB, Freiherr von (1795-1873). A German soldier, born at Maikammer in the Palatinate. He was trained in the French military institutes of Bonn and Saint-Cyr; in the campaigns of 1814-15, receiving the Cross of Honor; served in the French ranks against the allies, and, having entered the Bavarian army in 1816, rose to be lieutenant general in that organization (1861). As such, he fought against Prussia in 1866. Promoted to be general (1869), he commanded the Second Army Corps of Bavaria in the Franco-German War, during which he captured the fortress of Marsal and took a noteworthy part in the battle of Sedan. Subsequent to the war he retained

command of the corps, with headquarters at Würzburg.

HARTMANN, JOHANNES FRANZ (1865-). A German astronomer, born in Erfurt. He studied at the universities of Tübingen, Berlin, and Leipzig, was assistant in the observatories of Leipzig, Vienna (Ottakring), and Potsdam, and in 1898 became director at Potsdam and in 1909 of the observatory at Göttingen. His especial field being spectroscopy, in 1906 he invented a valuable spectrocomparator.

HARTMANN, JOHAN PEDER EMILIUS (1805-1900). A Danish composer, born at Copenhagen. He was one of a family of German-Danish musicians, a grandson of Johan Hartmann the composer, and the son of August Wilhelm Hartmann, who was an organist at Copenhagen (1800-50) and the teacher of his more distinguished son. Young Johan became a teacher in the conservatory in 1827, director in 1840, and royal chapelmaster in 1849. He composed a number of works, among which are the operas: *The Ravenns, or Brotherly Proof* (1832); *The Golden Horns* (1834); *The Corsairs* (1835); *Little Christina* (1846); music for dramas by Anderson, Oehlenschläger, and Heiberg; song cycles, and instrumental music for piano and violin, etc. From 1830 to 1892 he was president of the Musical Association of Copenhagen. He ranks among the first of Danish composers.—His son, EMIL HARTMANN (1836-1898), born at Copenhagen, was at first an organist and afterward gave himself entirely to composition. His works consist of ballets, overtures, songs, several operas, and much instrumental music.

HARTMANN, SIR JULIUS VON (1774-1856). A German general, born in Hanover. He served in the Hanoverian artillery against France in the Netherlands (1793-94), and from 1803 in the German Legion, in which, as commander of artillery, he fought under Wellington in the Peninsular campaign and at Waterloo. In 1833 he was appointed to the command of the entire Hanoverian artillery, which he efficiently organized, in 1836 was promoted to be lieutenant general, and in 1850 was retired.

HARTMANN, KARL ROBERT EDOUARD VON (1842-1906). A German philosopher. He was born in Berlin, Feb. 23, 1842, educated at the school of artillery, and held a commission from 1860 to 1865, when he resigned it because a serious knee trouble, brought on by an accident, made it impossible for him to perform his duties. In 1867 he took his degree at Rostock and returned to Berlin, where he lived thereafter devoted to literary pursuits and doing most of his work in bed while suffering great pain. This circumstance did not, however, diminish his literary activity. The titles of some of his works will show his versatility: *Aphorismen über das Drama* (1870); *Shakespeares Romeo und Juliet* (1875); *Die Selbstzerstörung des Christenthums und die Religion der Zukunft* (1874); *Wahrheit und Irrthum im Darwinismus* (1875); *Zur Reform des höheren Schulwesens* (1875); *Beiträge zur Naturphilosophie* (1876); *Zur Geschichte und Begründung des Pessimismus* (1880); *Die Krisis des Christenthums in der modernen Theologie* (1880); *Der Spiritismus* (1885); *Ästhetik* (1886-87); *Zwei Jahrzehnte deutscher Politik und die gegenwärtige Weltlage* (1888); *Ausgewählte Werke* (1904). His first book, *Philosophie des Unbewussten* (1869; enlarged in later editions; Eng. trans., *The Philosophy of the Unconscious*, 2d ed., New York, 1904), went

through edition after edition and gave rise to a very copious controversial literature. Höffding says that, between the years 1870 and 1875, 58 works appeared treating of Hartmann's philosophy. Its peculiar combination of optimism with pessimism is no doubt the cause of its popularity.

In opposition to Schopenhauer (q.v.), Hartmann maintains that idea is indispensable to will. "No one can in reality merely *will*, without willing *this* or *that*: a will which does not will something, is not; only through the *definite content* does the will obtain the possibility of existence, and this content is *idea*. Therefore *no volition without mental object*, as Aristotle said long ago." Against Hegel, whom Hartmann mistakenly conceives as advocating a doctrine of nonwilling idea, he maintains that it is necessary "to recognize will in the idea, whenever the latter displays an outward causality." The world, as being a process, must therefore be the product of will; and as will implies idea, it must be the product of will realizing an idea. But, according to Hartmann, an idea need not be conscious. Indeed, consciousness "cannot at all lie in the idea as such, but must be an accident; which comes to the idea from elsewhere. The action of unconscious will is clearer in itself and appears less paradoxical"; indeed, will must be unconscious if the idea is unconscious. The term "the Unconscious" is used by Hartmann to "designate the united unconscious will and unconscious idea," or the subject of which unconscious will and unconscious idea are the two attributes inseparably united. Will and idea "are not two drawers in the Unconscious, in one of which lies the irrational will, in the other the powerless idea, but they are two poles of a magnet with opposite qualities, on whose opposition the world rests." They "contradict one another as little as, say, the redness and the perfume of the rose." But though thus compatible, "the one is what the other is not (the will is not logical, and the idea not endowed with will)." "The Unconscious," thus defined, is an individual, "an unconscious world soul," which is "simultaneously present and purposively efficient in all organisms and atoms, the bodily life and the human mind." It is one in all space and in all time, space and time being its creations, not its conditions. It can properly be defined as "pure, unconscious (impersonal but indivisible, therefore individual) Spirit," and in accordance with this definition Hartmann says that "our Monism may be more precisely characterized as spiritualistic Monism." Consciousness arises out of the "unconscious" by "the emancipation of the idea from the will." This emancipation of idea from will arises when organized matter suddenly breaks in upon this self-contained peace of the Unconscious and thrusts upon the astonished individual spirit an idea which falls upon it as from the skies, for it finds in itself no will to the idea. The will endeavors to negate the idea, but cannot; and this failure is the cause of pain, which is "the vexation of the unconscious individual mind at the interloping idea." This break-up of the original unity of will and idea is itself the work of "the Unconscious," which "can never err—nay, not even doubt or hesitate"; it "occurs precisely at the most suitable moment, when the whole purpose frame of the world requires it." Indeed, "the world is contrived and guided as wisely and as well as is possible." "The existing world is the best of all possible ones," and yet "it may still be thoroughly bad," its nonexistence may

be preferable to its existence. An empirical examination of the facts proves this to be the case. The contrary belief is an illusion of which there are three stages. The childhood of the individual and the race is spent in the illusion that the individual can attain happiness now; the youth of the race (mediaevalism) is spent in the belief that happiness is attained by the individual in a transcendent life after death; and the manhood of the race is spent in the illusion that happiness is attainable by others in this world in the remote future. The true view is that of "the final redemption from the misery of volition and existence into the painlessness of nonwilling and nonbeing." But this redemption can be won only by making "the ends of the Unconscious ends of our own consciousness." And as positive happiness is unattainable, the end of the unconscious is the elimination of misery. "When this consummation is achieved, then volition will resolve upon its own noncontinuance, seeing that continuance involves a surplus of misery. This resolve will be a simultaneous common resolve of individuals in whom the larger half of the active Spirit of the universe is manifest." For a survey of the controversial literature on Hartmann's teaching, consult: Plummer, *Der Kampf ums Unbewusste* (2d ed., Leipzig, 1890); also in general Kober, *Das philosophische System Eduard von Hartmanns* (Breslau, 1884); Drews, *Eduard von Hartmanns Philosophie und der Materialismus in der modernen Kultur* (Leipzig, 1890); id., *E. von Hartmann's Philosophisches System im Grundriss* (Heidelberg, 1902); J. Sully, *Pessimism* (London, 1891); also the standard histories of modern philosophy.

HARTMANN, MORITZ (1821-72). An Austrian politician, poet, and novelist, born of Jewish parents at Duschnik, Bohemia. He studied at Prague and Vienna, traveled in Italy, Switzerland, and Germany, and afterward taught in Vienna till 1844, when he felt it wise to leave his native country in order to publish *Kelch und Schwert* (1845), a collection of poems radical in their religious and patriotic sentiment. *Neuere Gedichte* (1847) followed a residence in Belgium and France. He then returned to Austria and was imprisoned, but was freed by the revolution of March, 1848. He became the leader of the German party at Prague, was chosen deputy to the National Assembly at Frankfurt, fled from Vienna in time to escape imprisonment, and took part in the "Rump Parliament" at Stuttgart. From 1849 to 1868 he lived in voluntary exile in Switzerland, England, Ireland, and the East, residing longest in Paris, Geneva, and Stuttgart. He was Paris correspondent of the *Kölnische Zeitung* and represented it in the Crimea during the Crimean War. In 1865 he settled in Vienna as one of the editors of the *Neue Freie Presse*. One of his best-known works is a political satirical poem, the *Reichschronik des Pfaffen Mauritius* (1849). He also published volumes of tales (1863-66), under the titles *Novellen* and *Nach der Natur*. Hartmann's select poems were edited in 1874; his collected *Works*, in 10 volumes, 1873-74. Consult Brandes, *Das junge Deutschland* (Berlin, 1899).

HARTMANN, ROBERT (1832-93). A German anthropologist, born at Blankenburg. He was educated at Berlin, was professor of zoölogy and anatomy at the Academy of Proskau, and in 1867 was made professor of anatomy at Berlin. He wrote: *Reise des Freiherrn A. von Bar-*

nim durch Nordafrika (1863), a description of an expedition in which he had taken part in 1859 and 1860; *Naturgeschichtlich-medizinische Skizze der Nilländer* (1865-66); *Die Völker Afrikas* (1879); *Handbuch der Anatomie des Menschen* (1881); *Der Gorilla* (1881); *Die menschenähnlichen Affen* (1883); and the anthropological part of the report of the cruise of the man-of-war *Gazette*. With Bastian he founded the *Zeitschrift für Ethnologie*.

HARTMANN VON AUE, fön ou'e. A German poet. See AUE, HARTMANN VON.

HARTNACK, hirt'nák, EDMUND (1826-91). A German optician, born at Templin, Brandenburg. He worked under Ruhmkorff in Paris and with Oberhäuser, whose establishment he bought. After 1870, when he was forced to leave Paris, he sold the factory and established a new one at Potsdam. He made many improvements in the microscope, especially by his extension of Amici's system of immersion and by his work on the Nicol prism.

HARTNESS, JAMES (1861-). An American mechanical engineer and manufacturer of machinery, born in Schenectady, N. Y., and educated at Cleveland, Ohio. After 1890 he became superintendent, manager, and finally president of the Jones and Lamson Machine Company of Springfield, Vt.; director in other manufacturing, and consulting engineer of the Fitchburg Machine Works. He invented about 80 devices, including the flat turret lathe (1891), the Loswing lathe (1904), and the turret equatorial telescope (1909). He became a member of the American Academy for the Advancement of Science, and vice president in 1913-14 and president in 1914 of the American Society of Mechanical Engineers. He published: *The Evolution of the Machine Shop* (1905); *Machine Building for Profit* (1909); *Flat Turret Lathe Manual* (1910); *Human Factor in Works Management* (1912).

HARTOG, här'tög, MARCUS (MANUEL) (c.1850-). A British zoologist. He was educated at University College, London, and at Trinity College, Cambridge. From 1874 to 1877 he was assistant in the Ceylon Royal Botanic Gardens; then was demonstrator and lecturer in Owens College, Manchester; in 1882-1909 was professor of natural history, Queen's College, Cork; and in 1909 became professor of zoology in University College, Cork. Besides technical memoirs, encyclopædia articles, and contributions to the *Cambridge Natural History* on lower forms, he wrote *Problems of Life and Reproduction* (1913).

HARTOGIA (Neo-Lat. nom. pl., named in honor of John Hartog, an early traveler). A genus of trees, or shrubs, of the family Rutaceæ. *Hartogia capensis*, now known as *Agathosma hispida*, a native of the Cape of Good Hope, is only 10 or 15 feet high, but the trunk is 1 foot to 1½ feet in diameter. The wood, which is hard, fine-grained, close and tough, is much valued as veneer, and when polished is equal to the finest mahogany. The Dutch colonists call it ladlewood, probably from one of the first uses to which they found it convenient to apply it.

HARTSHORN, JOHN FREDERICK (1830-89). An American soldier and politician, born in Pennsylvania. He graduated at Union College in 1853 and was admitted to the bar in 1859. He was among the first to answer President Lincoln's call for volunteers in the spring of 1861 and took part in the first battle of Bull Run as aid-de-camp on the staff of Gen. William B.

Franklin. He then raised the Fifty-first Pennsylvania Regiment, which he led in a brilliant and successful charge at Antietam. He commanded a brigade at Vicksburg, and afterward was with Sherman in the advance to Jackson, Miss. He recaptured Fort Stedman before Richmond, displaying great bravery, for which he was brevetted major general. After the war he was twice chosen Auditor General of Pennsylvania (1865 and 1868), and he served as Governor for two terms (1873-79), during which he reorganized the militia of the State and put it upon a strictly military basis.

HARTSHORN. A popular name for ammonia water or carbonate of ammonium. The name was given in early pharmacy to the antlers of the *Cervus elaphus*. Its composition is very different from that of persistent horns, as those of the ox, e.g., and is identical, or nearly so, with that of bone. The products of its distillation were formerly much used in medicine, under the titles of oil of hartshorn, volatile salt of hartshorn, spirits of hartshorn, etc.; but they are now replaced by simpler preparations of the active ingredients of these substances, viz., ammonia and carbonate of ammonia. See also AMMONIA.

HARTSHORNE. A city in Pittsburg Co., Okla., 15 miles east of McAlester, on the Chicago, Rock Island, and Pacific Railroad (Map: Oklahoma, F 4). It is in a coal-mining, fruit-growing, and stock-raising region and has a cement plant and briquette factory. The water works are owned by the city. Pop., 1900, 2435; 1910, 2063.

HARTSHORNE, EDWARD (1818-85). An American physician, born in Philadelphia. He graduated from Princeton University in 1837 and in medicine from the University of Pennsylvania in 1840. In 1843 and again in 1844 he published reports in favor of the separate system of prison discipline, which attracted considerable attention, as they were the first written by one who had had experience with the practical workings of the system. In 1847 he was the secretary of the first prison discipline convention, which met in Philadelphia, and 10 years later acted in the same capacity to the first sanitary convention in the United States.

HARTSOEKER, hirt'sou-kör, NIKLAAS (1636-1725). A Dutch physicist and histologist, born at Gouda. He early showed a taste for mathematics and physics; studied these subjects without the permission or knowledge of his father, a Reformed clergyman, who wished his son to become a clergyman; and at the age of 18 made a powerful microscope, with which he made striking discoveries regarding spermatozoa. His father finally consented to his going to Leyden, and later to Amsterdam, where he met Huygens and confided to him his discoveries. In 1678 he went to Paris and studied under Cassini; from 1684 to 1696 he lived in Paris and then returned to Holland to become the instructor of Peter the Great. He went to Düsseldorf, in 1704, on the urgent invitation of the Elector of the Palatinate, and was appointed honorary professor at Heidelberg. In 1717, after the Elector's death, he moved to Utrecht, where his continued application to work broke his health. His works include: *Essai de dioptrique* (1694), in which his independent discovery of many of Newton's observations on light appeared, as well as a well-defined theory of general physics; *Principes de physique* (1696), developing this theory; *Con-*

lectures physiques (1707-08); *Cours de physique* (1730).

HART'S-TONGUE FERN. A name applied to ferns of the genus *Scolopendrium*, or *Phyllitis*, as it is sometimes designated. They are large ferns with oblong, strap-shaped leaves or fronds. *Scolopendrium vulgare* is common in Europe and Asia, but, so far as is known, is rare in America, occurring in damp ravines or under limestone cliffs in a few localities in New York, Tennessee, and Canada. The fronds are 10 to 15 inches high and 1 to 2 inches broad, with heart-shaped bases and entire or undulate margins.

HARTSUFF, GEORGE LUCAS (1830-74). An American soldier, born at Tyre, N. Y. He graduated at West Point in 1852 and served on the frontier and in Florida, where, during a fight with the Seminole Indians, he received a wound which eventually caused his death. In March, 1861, he was appointed assistant adjutant general with the brevet rank of captain and was assigned to duty under Rosecrans in West Virginia. Later he was severely wounded at Antietam and immediately after the battle was made brevet colonel for gallant and meritorious services. On March 13, 1865, he was given the brevet rank of major general in the regular army and from April 3 to May of the same year was in command of City Point and Petersburg. He was mustered out of the volunteer service on Aug. 24, 1865, and resigned from the regular army on June 20, 1871, because of disability resulting from wounds received in battle.

HARTT, CHARLES FREDERICK (1840-78). An American geologist, born at Fredericton, New Brunswick. He studied under Agassiz for a number of years and then accompanied him as geologist on an expedition to Brazil in 1865. After his return he was in 1868-75 professor of geology and physical geography at Cornell University, but interrupted his university duties to make three more expeditions to Brazil, where he finally settled in 1875 to enter upon his great work as chief of the geological commission appointed to make a survey of the entire Empire. Scarcely more than two years later, however, he died of yellow fever in Rio de Janeiro, Brazil. His principal publication is *The Geology and Physical Geography of Brazil* (1870). Consult Hay, "The Scientific Work of Prof. Charles Frederick Hartt," in the *Proceedings and Transactions of the Royal Society of Canada*, vol. v (2d series, Ottawa, 1899).

HARTTUNG, JULIUS VON PELUCK. See PELUCK-HARTTUNG.

HARTWELL, EDWARD MUSSEY (1850-). An American statistician, born at Exeter, N. H. He graduated from Amherst College in 1873, taught for several years, and studied at Johns Hopkins University (Ph.D., 1881) and at Miami Medical College (M.D., 1882). After acting as director of the gymnasium at Johns Hopkins (1883-91) and director of physical training in the Boston public schools (1891-97), he became secretary of the statistical department of the city of Boston. In 1888-89 he was special agent of the Bureau of Labor in Europe, and in 1906-08 was chairman of the Massachusetts State Commission for the Blind. He served as vice president of the American Statistical Association in 1911-12. Besides preparing numerous pamphlets and articles on his subjects of special study, he translated from the Swedish Kleen's *Handbok i Massage*.

HARTWICH, h rt'v k, EMIL HERMANN

(1801-79). A German engineer, born at Bendorf, near Brandenburg. He was inspector of water works in Steinau and commissioner of buildings at Danzig, where he undertook the completion of the moles in the Baltic near Neufahrwasser. He built the bridge over the Rhine at Coblenz and introduced many English methods in German railroads, especially a central-switch apparatus. Among his writings are: *Erweiterungsbauten der rheinischen Eisenbahn* (1864-67); *Denschrift, betreffend die Herstellung einer Eisenbahn welche Berlin durchschneidet* (1872); *Aphoristische Bemerkungen  ber das Eisenbahnwesen* (2d ed., 1874); and many contributions to the *Zeitschrift f r Bauwesen*.

HARTWICH, h rt'v k, HERMAN (1853-). An American genre, landscape, and portrait painter. He was born in New York City and studied in the Munich Academy under Professors Diez and L fftz. After painting portraits in the United States from 1893 to 1896, he made Munich his residence. His art does not differ materially from that of the Munich Secessionists, to which group he allied himself, and is in no sense distinctly American. He devoted himself particularly to subjects from Upper Bavaria and the Tirol. Among his awards are gold medals at Munich, Berlin, and Salzburg, and a silver medal at the St. Louis Exposition (1904). He is represented in the galleries of Leipzig, Stuttgart, Munich, and Cleveland, Ohio.

HARTWICK, or HARTWIG, h rt'v k, JOHN CHRISTOPHER (1714-96). A German-American Lutheran clergyman. He was born in Saxe-Gotha and is said to have studied at the University of Halle. In 1745, after having been ordained in the German Lutheran Church in London, he came to America to take charge of the Palatinate Germans settled along the Hudson in New York State. Two years later he assisted at the organization of the First Lutheran Synod in Philadelphia. Besides his work in New York his clerical labors extended also to Pennsylvania, Maryland, Virginia, and New England. In 1754 he obtained the title to 21,500 acres of land in Otsego Co., N. Y., which he had bought from the Indians. This was employed, in accordance with his directions, to establish a theological and classical seminary. This institution, known as the Hartwick Seminary, was opened at Hartwick, N. Y., in 1815. Its theological work was dropped, and it became a classical academy.

HARTWIG, KARL ERNST ALBRECHT (1851-1923). A German astronomer, born in Frankfurt-on-the-Main. He was educated at Erlangen, Leipzig, G ttingen, and Munich; taught in secondary schools; was an assistant at the Strassburg Observatory; was employed in preparing the results of the German observations of the transit of Venus in 1874; in 1882-83 led the German expedition to Bahia Blanca for the observation of Venus; in 1884 became lecturer at Dorpat; and in 1886 took charge of the building of the Remeis Observatory at Bamberg, opened in 1889, with himself as director.

HARTWIG, OTTO PETER KONRAD (1830-1903). A German historian, born at Wichmannshausen. He studied theology and linguistics at Marburg, Halle, and G ttingen. From 1860 to 1865 he was preacher and teacher of the German Evangelical church in Messina, Italy. In 1867 he joined the staff of the Marburg University library, from which he went to the University of Halle as librarian in chief, but resigned in 1898. In 1884 he founded, with

Schulz, the *Centralblatt für Bibliothekswesen*. Among Hartwig's works are: *Henricus de Langenstein* (1857); *Aus Sicilien* (1867-69); *Sicilianische Märchen*, collected by Laura Gonzenbach (1870); *Die Uebersetzungslitteratur Unteritaliens in der normannisch-staufischen Epoche* (1886); *Sulla data degli sponsali di Arrigo VI con la Costanza*, etc. (1878), with Amari; *Quellen und Forschungen zur ältesten Geschichte der Stadt Florenz* (1875-80); *Festschrift zum 500-jährigen Geburtstag Gutenbergs* (1900).

HARTZELL, härts'el, JOSEPH CRANE (1842-). An American Methodist Episcopal bishop. Born at Moline, Ill., he graduated from Illinois Wesleyan University in 1865 and from Garrett Biblical Institute in 1868, and entered the ministry in the latter year, having been ordained to the ministry two years earlier. In 1873 he founded and became editor of the *Southwestern Christian Advocate*. He was assistant secretary and secretary of the Freedmen's Aid and Southern Education Society for 14 years. Elected in 1896 Missionary Bishop to Africa (with episcopal residence at Funchal, Madeira), he labored very successfully in opening and building up missions, the latest one opened under his supervision being that among the Moslems in north Africa. He became a close friend of Cecil Rhodes and other African leaders. His writings comprise contributions to religious periodicals.

HARTZENBUSCH, härts'en-bush, JUAN EUGENIO (1806-80). A Spanish dramatist of the Romantic movement, born at Madrid, of a German father and a Spanish mother. He first studied theology and then took to painting, but was forced by his father's illness to follow for some years his father's trade, that of a cabinet-maker, training himself meanwhile for the work of a playwright by preparing versions of domestic and foreign dramas. His success was assured from the time of the first performance of the *Amantes de Teruel*, his best-known production, and one of the most important plays of the Romantic period of Spanish literature in the nineteenth century. Highly sentimental, it brings once more upon the boards a story of sad loves which had already been treated by Artieda, Tirso de Molina, and Montalbán. Later dramas of Hartzenbusch, most of them of an historical nature are: *Doña Mencía* (1838); *Alfonso el casto* (1841); *La jura en Santa Gadea* (1845), dealing with the history of the Cid; *La madre de Pelayo* (1846); *La ley de raza* (1852), relating to the history of the Visigothic Empire; *Vida por honra* (1858), a statement of the tragic love of the Conde de Villamediana; *El mal apóstol y el buen ladrón* (1860), a play with some of the characteristics of the *Auto sacramental*. His comedies of a Moretinian type are: *Un sí y un no*; *La visionaria*; *Juan de las Viñas*; *La redoma encantada*; *Los polvos de la madre Celestina*; *Las Batuecas*. Hartzenbusch also published *Ensayos poéticos y artículos en prosa*, etc. (1843), and *Ouentos y fábulas* (1861). He was a lyric poet of but modest pretensions. As editor of the dramas of Lope de Vega, Calderón, and other masters of the *siglo de oro*, he did not possess the proper scientific and critical ability. Associated with the staff of the *Biblioteca Nacional* at Madrid, after 1844, he became its director in 1862 and retained this post till his death. He was made a member of the Academy in 1847. Consult his works in the *Colección de escritores castellanos* (Madrid, 1887 et seq.); Fernández-Guerra's essay on Hartzenbusch in

Novo y Colson, *Autores dramáticos contemporáneos*; and Enrique Piñeyro, *El Romanticismo en España*, pp. 117-137.

HARTZ (härts) **MOUNTAINS**. See **HABZ MOUNTAINS**.

HARUERIS. See **HARUÉRIS**.

HARUN AL-RASHID, há-rōon' al-rá-shéd' (?-809). The fifth of the Abbasside caliphs. He was born either on the 20th of March, 763 A.D., or the 15th of February, 766 A.D., and in 786 succeeded his elder brother, Al-Hadi, in the caliphate. The administration during a considerable part of the brilliant reign of Harun was intrusted to the Grand Vizier Yahya, head of the powerful Barmek (or Barmecide) family; and the energy of the administration, the enforcement of order, and the general prosperity of the country proved that Harun's confidence was not misplaced. Rebellions were suppressed and the integrity of the Empire was preserved, saving the loss of a portion of north Africa occasioned by the rise of the Idrisites (q.v.). The capital, Bagdad, became the most flourishing city of the period. Tribute was paid to Harun from all quarters, and splendid edifices were erected by him at an enormous cost. Harun loved luxury and pleasure, was a patron of learning, poetry, and music, and his court was the resort of the most eminent Mohammedans of the age. He was celebrated in countless songs and narratives and is perhaps best known in the West as the caliph around whom centre the tales of the Arabian Nights. Towards the end of his reign he conceived a hatred towards the Barmecides (q.v.), due, perhaps, to jealousy of their growing influence and power; yet he suffered the reins of government to remain in their hands for some years. In 803 he caused the Vizier, his four sons, and all their descendants, one only excepted, to be executed, not even excepting his favorite Ja'far, who had been his companion in his nocturnal rambles through the streets of Bagdad. The affairs of the Empire felt the change; disorders broke out in every part of the caliphate, and treason and rebellion led to civil war. A formidable insurrection broke out in Khorassan, and Harun marched in person against the rebels. But an attack of apoplexy obliged him to remain behind in Tus, where he soon afterward died, in the month of March, 809. While Harun was an enlightened monarch, he was a thorough Oriental despot, who has been somewhat idealized in popular tradition. Consult: Muir, *The Caliphate* (London, 1891); Osborn, *Islam under the Khalifs of Bagdad* (ib., 1878); Palmer, *Haroun Alraschid* (ib., 1881); Weil, *Geschichte der Chalifen* (Stuttgart, 1846-62); Müller, *Der Islam im Morgen- und Abendland* (Berlin, 1885).

HARUSPEX. See **AUGURIES AND AUSPICIES**; **HABUSPICES**.

HARUSPICES (Lat., inspectors of entrails). Roman soothsayers. They seem to have come originally from Etruria, whence the Romans derived many of their religious institutions. Their art, (*ars*) *haruspicina*, which in many respects was like that of the augurs (see **AUGURIES AND AUSPICIES**), consisted in interpreting the will of the gods by inspecting the entrails of the animals offered in sacrifice (hence they are also called *extispices*, from *exta*, entrails, and *specio*, look into) and by observing other circumstances connected with the offerings, such as the willingness or the unwillingness of the victim to come to the altar, the flame, the

smoke, etc. They took indications also from earthquakes, lightning, and all other extraordinary phenomena of nature, called *portenta* or *monstra*. The haruspices did not equal the augurs in dignity and respect; they were regarded rather as media of communication with heaven than as possessing any independent religious authority. They had no organization, such as the augurs had; they did not, in earlier times at least, form a *collegium*, nor had they a *magister*. They were, however, at one time considered of great importance; but in later times their art fell into disrepute with the more intelligent portion of the Roman citizens. Some of the later emperors, especially Alexander Severus, endeavored to revive and encourage the art of the haruspices, but it was finally abolished by Constantine. Their sacred books were called *libri haruspici, fulgurales*, and *tonitruales*. Consult: Bouché-Leclercq, *Histoire de la divination dans l'antiquité* (Paris, 1879-82); Clairin, *De Haruspiciis apud Romanos* (ib., 1880); Carter, *The Religion of Numa* (London, 1906); id., *The Religious Life of Ancient Rome* (Boston, 1911); Fowler, *The Religious Experience of the Roman People* (New York, 1911); Wisowa, *Religion und Kultus der Römer* (2d ed., Munich, 1912). See DIVINATION.

HARVARD. A city in McHenry Co., Ill., 63 miles northwest of Chicago, on the Chicago and Northwestern Railroad (Map: Illinois, H 1). It contains a public library, a hospital, and a high school, and there are railroad shops and a round-house, creameries, hardware factories, cement works, etc. The water works are owned by the city. Pop., 1900, 2602; 1910, 3008.

HARVARD, JOHN (1607-38). An English clergyman in New England, the principal founder of Harvard College, born in Southwark, London. His father, Robert Harvard, was a butcher. His mother, who married twice after her first husband's death, became possessed of considerable property, which enabled her to give John Harvard a good education, and he was accordingly sent to Emmanuel College, Cambridge University, where he graduated in 1631, studied theology, and took his master's degree in 1635. In 1637 he married Ann Sadler, the daughter of a clergyman of Sussex, and removed to New England. There he settled at Charlestown, on Massachusetts Bay, where he was admitted a freeman in August, and where he became an assistant pastor of the First Church, of which the Rev. Z. Symmes was in charge. His health soon gave way, however, and he died of consumption on Sept. 18, 1638, after a residence in the Colony of little more than a year. By his will he left his library of 200 volumes and a sum of about £400 to the college at "New Towne," later Cambridge, for which the General Court of the Colony had made an appropriation of £400 in 1636. A year after the young clergyman's death, in commemoration of his benefaction, the name of Harvard was conferred upon the institution. Consult Rendle, *John Harvard* (London, 1885), and H. C. Shelley, *John Harvard and his Times* (Boston, 1907).

HARVARD COLLEGE OBSERVATORY. An astronomical observatory, situated at Cambridge, Mass., in lat. 42° 22' 47.6" N. and long. 4h. 44m. 31.05s. W. It was founded in 1843 as a result of the widespread interest in astronomy occasioned by the great comet of that year. Its work is devoted principally to stellar photography and photometry; in 1886, through the

generosity of the widow of Prof. Henry Draper, provision was made for carrying on research in stellar spectroscopy. The equipment includes an 8-inch meridian circle; the 15-inch East refractor, used chiefly for photometric observations; the 8-inch and 11-inch Draper refractors for photographic work; a 12-inch meridian photometer; and the 24-inch Draper reflector. Since 1891 a station has been maintained in the Southern Hemisphere at Arequipa, Peru. The two observatories are together able to cover the whole sky, and a magnificent collection of upward of 200,000 negatives has been accumulated, the detailed study of which is carried on at Cambridge by a large corps of assistants. Among the notable discoveries resulting from the examination of these plates were those of the ninth and tenth satellites of Saturn, several *novæ*, and many new variable stars. The 24-inch photographic doublet, presented to the observatory by Miss C. W. Bruce, of New York, was transferred to Arequipa in 1896. Reports of the work of both observatories are published in the *Annals of the Harvard College Observatory*, upward of 70 volumes of which have been issued, and in the annual report of the director. The director in 1914 was Prof. Edward C. Pickering.

HARVARD UNIVERSITY. The oldest institution of higher education in the United States, situated at Cambridge, Mass. It had its inception in a desire of the early settlers of the Colony of Massachusetts Bay to preserve and perpetuate in their new home the classical and theological learning acquired by many of them at the University of Cambridge and to educate the "English and Indian youth in knowledge and godliness." To this end the General Court of the Massachusetts Bay Colony voted £400 in 1630, and in the following year appointed 12 eminent men of the Colony, including Gov. John Winthrop, "to take order for a college at New-towne," which was afterward renamed Cambridge, in honor of Cambridge University. While the organization of the institution was in progress, Rev. John Harvard, an English nonconforming clergyman, the minister of the church in Charlestown, Mass., died in 1638, bequeathing to the new school his library, consisting of 260 volumes, together with half of his estate, valued at about £400. In recognition of this gift—munificent in those days—the new school was named Harvard College. The Colonial magistrates and many private persons, emulating Harvard's generosity, also contributed books, funds, and gifts in kind. The first building was erected in 1637 by Nathaniel Eaton, who also taught until 1639, when he was dismissed for misconduct. The Rev. Henry Dunster was elected president in 1640, and in 1642 the first class, consisting of nine students, was graduated. The government of the college was the same year vested in a board of overseers, consisting of the Governor, the Deputy Governor, the magistrates, the teaching elders of the "six next adjoining towns" (Cambridge, Watertown, Charlestown, Boston, Roxbury, and Dorchester), and the president of the college. In 1650 the college was formed into a corporation, consisting of the president, five fellows, and the treasurer, for the immediate administration of the financial and educational affairs of the institution, and in 1657 the charter of the corporation was so amended as to dispense with the positive assent of the overseers in matters relating to the in-

ternal management of the college, leaving, however, final jurisdiction to that body if necessary. These two governing bodies acted as checks upon each other throughout the earlier history of Harvard, and though at times their antagonism was productive of some good, restraining the too rapid advances proposed by the liberal corporation on the one hand, and preventing the overseers from using the college for partisan purposes, yet the progress of the college was much retarded by these controversies. The character of the board of overseers has been fundamentally changed by successive legislative acts, concurred in by the corporation and overseers. According to the State constitution of 1780 it was composed of the Governor, Lieutenant Governor, Council and Senate of the Commonwealth, the president of the college, and the ministers of the Congregational churches of the towns mentioned above. In 1810, 15 laymen and 15 Congregational ministers, with the President of the Senate and the Speaker of the House, all inhabitants of the State, were substituted in place of the Senate and the ministers of the six towns. In 1814 the members of the Senate were restored to membership; the Act of 1834 made clergymen of all denominations eligible for membership on the board; but it was not ratified by the corporation and overseers until 1843; the Act of 1851 secularized the board by containing no reference to clergymen; the Act of 1865 transferred the election of members of the board from the State Legislature to persons holding the B.A., M.A., or honorary degrees from the college, who were to vote on Commencement Day at Cambridge; in 1880 eligibility to election as overseer was extended to nonresidents of the State. The Act of 1889, accepted in 1902, authorized the president and fellows and the board of overseers to extend the suffrage to the holders of other degrees than B.A. and M.A. Under this act in 1907 the graduates of the Graduate School of Arts and Sciences, and of the Graduate School of Applied Sciences, were granted the right to vote. Nominations are made by postal ballot, and the election is held in Cambridge on Commencement Day.

The administrations of Presidents Dunsler, Chauncy, Hoar, and Mather, covering a period of nearly 70 years, were characterized by a constant struggle for existence on the part of the college, due to the parsimony of the government and to the religious controversies of the liberals and orthodox. Rev. Increase Mather actually secured, in 1692, the passage of an act granting a new charter, placing the institution under control of the Calvinists, but the royal sanction to the instrument was withheld. In 1707 the struggle for the control of the college culminated in the reaffirmation of the charter of 1650 by the General Court, the liberals gaining control of the corporation, while the orthodox retained their influence in the board of overseers. In 1721 Thomas Hollis, an English merchant, endowed a divinity chair, expressly stipulating that the incumbent should not be subjected to any particular religious tests. The overseers at first refused to accept the gift; and when, at the instance of the corporation, they finally did accept it, the founder's wishes were disregarded by the exaction of a number of confessions from the first appointee. In 1762 an attempt was made by the orthodox party to establish a rival college in the Colony; but this was stoutly resisted by the overseers, and they succeeded in

dissuading Governor Bernard from granting a charter. In 1764 the first Harvard Hall, erected in 1672 and containing the library and apparatus, was burned; of John Harvard's library only a single volume was rescued. Sympathy for the college was awakened throughout the Colonies, which generously aided to repair the loss.

The liberal tendencies of Harvard manifested themselves on the political as well as on the religious side. The class of 1768 voted to take their degrees dressed in homespun, and the degree of LL.D. was conferred upon George Washington in 1776. Throughout the critical period of the Revolution Harvard loyally supported the patriotic cause by converting its funds into currency, whereby its finances greatly suffered. In 1780 the new State constitution confirmed the college charter with slight modifications, and by 1793 the college had entirely recovered from its financial difficulties, its funds being then estimated at \$182,000. The college after the close of the Revolution resumed its normal growth; the standard of scholarship was somewhat raised, and in 1782 a Medical School was established. Under President Kirkland's vigorous administration (1810-28) the college grew considerably. At the instance of Prof. George Ticknor, who had studied at Göttingen, a committee, with Hon. Joseph Story as chairman, was appointed to inquire into the methods of discipline and instruction at the college. The committee reported in 1824, recommending the division of the college into departments and the instituting of two classes of studies—those necessary for a degree and those which might be taken by students merely wishing "to pursue particular studies to qualify them for scientific and mechanical employment and the active business of life." These suggestions met with strong opposition from the conservatives. A new code of laws was nevertheless drawn up the following year, organizing the "faculty of the university," systematizing the college administration, creating departments, and admitting special students. This marks the transition period of Harvard from a classical college modeled after the traditions of Oxford and Cambridge to a university based on the principles of European universities. The attempt at expansion, which involved an increase in expenditure, received a temporary check when, in 1824, the Legislature refused to renew the grant of the bank tax, which had netted the college, since 1814, about \$10,000 annually. In 1825 the disbursements exceeded the income by about \$4000, and the attendance, owing to the enforced economy and the withdrawal of aid from needy students, decreased from over 300, in 1824, to about 200. Nevertheless, the policy of expansion was continued under President Josiah Quincy, private benefactions, as usual, supplying the want of State aid. The Law School, which had been established in 1817, was greatly strengthened by Mr. Nathan Dane's endowment of an additional chair, to which Joseph Story, whose works on equity and constitutional law form an important part of the legal literature of the United States, was appointed. In the modern-language department Professor Ticknor and his successor, Henry W. Longfellow, successfully offered a number of elective courses, but in other departments the attempt gradually to introduce electives did not meet with equal success. It has always been Harvard's tendency to encourage freedom of thought, and on that account it was formerly

considered the nursery of Unitarians. The Harvard authorities, however, were timorous, and although some of the leading thinkers of that sect in the United States, as, e.g., Emerson and Channing, were graduates of the college, yet, when the former addressed the divinity students in 1838, exception was taken to some of his remarks as being too liberal. Harvard's attitude towards the slave question was decidedly conservative. Charles Sumner and Wendell Phillips, leading advocates of the Abolition movement, had, however, been educated at the college; and when the final call to arms was issued, its sons were among the first to respond. To the memory of those who fell in the Civil War, Memorial Hall, one of the finest buildings of the university, erected by the alumni at a cost of over \$300,000, was fittingly dedicated in 1874. The administrations following President Quincy's resignation in 1845 were distinguished for their conservatism. The only notable additions to the university during that period were the Lawrence Scientific School and the Dental School. The struggle between the humanities and sciences, the rigid curriculum and the more liberal elective system, was about to come on in earnest, and Harvard's position in the educational world was largely decided when the great organizer and educational reformer Charles William Eliot was elected in 1869 as its president.

At the beginning of President Eliot's administration Harvard consisted of the college, wherein the courses were largely required, and a number of semi-independent professional schools, having no entrance requirements or correlation of studies. The total attendance, which was largely from New England, was, in 1869-70, 1107, including 615 college students and 13 graduates. The resident faculty numbered 78, including Lowell, Holmes, Agassiz, and Gray. The elective question was as yet in a chrysalid state, and the few elective courses offered were still in ill repute and not considered as on a par with required work. The funds of the university aggregated \$2,257,989.80, and the income \$270,404.03. The total value of university property was estimated at about \$10,000,000. The library contained about 192,000 volumes. President Eliot's term of office lasted for 40 years and was marked by a large growth in the number of students, in the endowment, and in the university plant; the area from which students were drawn was much enlarged, and the prestige and influence of Harvard greatly increased. The courses of study open to undergraduates were extended to include all branches of knowledge and the arts, while the complete adoption of the elective system left the choice of his studies entirely to the individual student. The requirements for admission and for graduation were raised and were maintained at a high level. The Graduate Schools of Arts and Sciences, of Applied Science, and of Business Administration were established; and with the exception of the Dental School the various professional schools were all made graduate institutions, with the requirement of a college degree for admission.

President Eliot retired in 1909 and was succeeded by Abbott Lawrence Lowell. Under his administration a system was adopted whereby students are required to select their studies, which still remain entirely elective, with a definite aim, early in their college course. A new system of admission requirements was introduced, which is intended to encourage high

schools to fit their pupils for Harvard. Special dormitories were erected for the freshman class.

The university in 1914 was divided into faculties and schools as follows: 1. The Faculty of Arts and Sciences, which has in its charge Harvard College, the Graduate School of Arts and Sciences, and the Graduate School of Business Administration. Harvard College, the original foundation, offers to undergraduates instruction leading to the degrees of A.B. and S.B. In the academic year 1913-14 it had 2359 students. The Graduate School of Arts and Sciences, established in 1872, offers to graduates of colleges and scientific schools opportunities for advanced work leading to the degrees of A.M. and Ph.D. It had 497 students in 1913-14. The Graduate School of Business Administration, established in 1908, provides courses in accounting, commercial law, economic resources, commercial and industrial organization, banking and finance, transportation, and insurance, and is intended to fit college graduates for administrative positions in the business world. The course of study ordinarily lasts two years, and the degree of Master in Business Administration (M.B.A.) is awarded for its completion. In 1913-14 this school had 113 students. 2. The Faculty of Divinity was formally established in 1819. It has charge of the Divinity School, which was originally Unitarian, but is now an undenominational school of theology. In 1913-14 it had 57 students. In 1908 the Andover Theological Seminary (Congregational) removed to Cambridge and affiliated with Harvard University; the courses of the Faculty of Divinity and of the Andover faculty are so planned as to form one systematic body of instruction. 3. The Faculty of Law, administering the Law School, dates from 1817. The regular course in the school is of three years' duration, and the degree of LL.B. is conferred upon its completion: the degree of Doctor of Law (J.D.) is conferred for one year's work after receiving the bachelor's degree. The Law School is one of the most flourishing departments of the university and in 1913-14 had 695 students. 4. The Faculty of Medicine has in charge the Medical School, founded in 1782, and the Dental School, founded in 1807. The course at the Medical School covers four years and leads to the degree of M.D. The degree of Doctor of Public Health (S.P.D.) is also given to holders of the M.D. degree for one year's work upon an approved subject. The Medical School is located in Boston and occupies a group of five buildings recently constructed; clinical work is carried on at a number of Boston hospitals. In 1913-14 it had an enrollment of 310. The Dental School, also in Boston, had an enrollment of 196. The regular course covers three years and leads to the degree of Doctor of Dental Medicine (D.M.D.). This school also occupies a new building, which adjoins those of the Medical School. 5. The Faculty of Applied Science has in charge the Graduate Schools of Applied Science, which at present consist of schools of engineering (civil, mechanical, and electrical), mining and metallurgy, architecture and landscape architecture, forestry, and applied biology. These schools as graduate institutions date only from 1906 and are the successors of the Lawrence Scientific School, which was established in 1847 and furnished technical instruction to undergraduates. An agreement has recently been made by Harvard and the Massachusetts Institute of Technology (q.v.) which provides

for entire coöperation in the teaching of mechanical, electrical, civil, and sanitary engineering, mining and metallurgy, in the buildings of the Institute now under construction on the Charles River Embankment in Cambridge. In 1913-14 the various schools of science had in all 130 students.

In addition to these schools and faculties there is also the work of University Extension. Under this head fall (1) the Summer School of Arts and Sciences, which has been held in Cambridge for six weeks of the summer vacation annually since 1871 and in 1914 had an attendance of 898; (2) University Extension Courses in Boston given by teachers at Harvard and at other colleges in Boston or vicinity; and (3) the School for Social Workers, also in Boston, established in 1904 by coöperation of Harvard and Simmons College. All of these schools and courses are open to both men and women. In 1910 the degree of Associate in Arts (A.A.) was established to provide for students in the Summer School and the Extension Courses. It calls for the same number of courses as the A.B. degree, but does not require entrance examination nor residence at the university. There is also the School for Health Officers, conducted by Harvard University and the Massachusetts Institute of Technology, acting in coöperation, through an administrative board appointed by both institutions. The Graduate School of Medicine, founded in 1911, is designed to offer adequate opportunity to those graduates who feel the need of reviewing their studies and to those who wish to keep abreast of recent advances in medicine; it also provides courses for those interested in special subjects. In the year 1913-14 it had 272 students.

The university maintains also a number of scientific establishments, of which the most important are the following: 1. The Bussey Institution, at Jamaica Plain, about 5 miles from Boston. This was established in 1871 as an undergraduate school of agriculture, but since 1908 it has been devoted to advanced instruction and research in subjects relating to agriculture and horticulture. 2. The Arnold Arboretum, founded in 1872 under the will of James Arnold, for scientific research in arboriculture, forestry, and dendrology. It occupies about 220 acres in West Roxbury. 3. The Astronomical Observatory, established in Cambridge in 1843, maintains also a station near Arequipa, Peru, and a series of meteorological stations crossing the Andes at elevations varying from 100 to 19,200 feet. (See HARVARD COLLEGE OBSERVATORY.) 4. The University Museum, consisting (a) of the Museum of Comparative Zoölogy, founded in 1859 by private subscription and by the State, and greatly enriched by the collections of Prof. Louis Agassiz and the gifts of his son, Alexander Agassiz; (b) the Peabody Museum of American Archaeology and Ethnology; (c) the Botanical Museum; and (d) the Mineralogical and Geological museums. 5. The Botanic Garden, founded in 1807, occupying about seven acres, on which are cultivated more than 5000 species for scientific purposes. 6. The Gray Herbarium, including the famous collection of Prof. Asa Gray, presented to the university in 1864. 7. The Harvard Forest, consisting of 2000 acres in Petersham, Mass. This was acquired in 1907 and is used in connection with the School of Forestry. 8. The

Blue Hill Meteorological Observatory in Canton, Mass., founded and for many years maintained by Abbott Lawrence Rotch (q.v.) and bequeathed by him to the university in 1912. There are also the Semitic Museum, the Fogg Art Museum, and the Germanic Museum, each located in a special building; a new building for the Germanic Museum, to be called Adolphus Busch Hall in honor of its donor, was in 1914 in process of construction. The university library contained on July 1, 1914, 1,120,000 volumes, about 665,000 pamphlets, and about 28,250 maps; in size and the value of its collections it ranks among the foremost American libraries. It includes the College Library, containing 700,000 volumes and 450,000 pamphlets, which is to be housed in the Harry Elkins Widener Memorial Library (now building), and the libraries of the various departments, of which the library of the Law School, containing, in 1914, 156,200 volumes and 20,000 pamphlets, of the Museum of Comparative Zoölogy (51,400 volumes), and the combined Andover-Harvard Theological Library (105,000 volumes and 38,000 pamphlets) are the most important.

The government of Harvard University is vested in (1) the corporation, composed of the president, treasurer, and five fellows, a self-perpetuating body, having charge of the material and educational interests of the university; (2) the board of overseers, consisting of the president and the treasurer ex officio, and 30 elected members, five of whom are chosen each year; (3) the university council, composed of the president, professors, and assistant professors and certain other university officials, with jurisdiction on educational questions that concern more than one faculty; and (4) the faculties of the several schools.

Entrance to Harvard College is by examination only, and the prospective student may make his choice between two systems of examinations. Under the "Old Plan" he is required to pass examinations in a number of prescribed and elective studies; he may take either the examinations set by the university or those in the same subjects prepared by the College Entrance Examination Board. Under the "New Plan," adopted in 1911, he must present a certificate for the quantity of his school work and must give proof of the quality of his scholarship by passing examinations in four subjects; the object of these examinations being to discover whether he is fit for college work, not to measure his proficiency in particular studies. Entrance to the Dental School is also by examination. The other professional schools admit only graduates of approved colleges and technical schools and do not require examinations. The tuition fee in the college has for many years been \$150 per year, but there is at present talk of increasing it. The tuition fees of the various graduate and special schools vary, the highest being \$225 per year. There is no exemption from tuition charges, but scholarships and other forms of aid are available to the annual amount of over \$75,000 for students in Harvard College and over \$100,000 for students in the professional and other graduate schools.

The departments issue a number of important publications, partly independent journals and partly stated reports in scientific periodicals. Important work is done by students in clubs connected with the various departments. Athletic sports are regulated by a committee repre-

senting the faculty, the graduates, and undergraduates. Physical training is provided by the Hemenway Gymnasium, built in 1878, and by two athletic fields, containing over 40 acres. The Harvard Union, a students' clubhouse, the gift of Henry Lee Higginson, was opened in 1901. In 1886 attendance at chapel was made voluntary, and, contrary to expectations, the religious side of the university has not suffered thereby. Five eminent preachers are annually appointed, without regard to sect, to conduct in turn daily services at the chapel, and seats also are provided for students at the local churches. Religious societies find ample accommodations for their meetings at the Phillips Brooks House. The grand total attendance of the university in 1913-14 was 5407, and the faculty numbered over 800. The university property in 1913 consisted of grounds and buildings valued at over \$12,000,000, scientific apparatus, etc., valued at \$2,000,000, and productive funds of \$27,440,000. The income, exclusive of gifts and bequests to the amount of \$2,095,000, was \$2,268,000.

Among the publications of the university, issued officially or indirectly, are: *Official Register of Harvard University*; *Harvard University Gazette*; *Harvard Oriental Series*; *Harvard Studies in Classical Philology*; *Quinquennial Catalogue of Harvard University*; *Harvard University Directory*; *Harvard Studies in Comparative Literature*; *Studies and Notes in Philology and Literature*; *Harvard Historical Studies*; *Harvard Economic Studies*; *Quarterly Journal of Economics*; *Harvard Law Review*; *Publications of the Astronomical Observatory*; *Contributions and Memoirs from the Cryptogamic Laboratory*; *Publications of the Museum of Comparative Zoölogy*; *Contributions from the Zoölogical Laboratory*; *Publications of the Peabody Museum of American Archaeology and Ethnology*; *Architectural Quarterly of Harvard University*; *Publications of the Arnold Arboretum*; *Publications of the Gray Herbarium*; *Contributions from the Chemical Laboratory*; *Bibliographical Contributions of the Harvard College Library*; *Journal of Medical Research*; *Contributions from the Jefferson Physical Laboratory*; *Harvard Psychological Studies*; *Publications of the Department of Social Ethics*; *Harvard Theological Review*; *The Harvard Graduates' Magazine*; *The Harvard Alumni Bulletin*; *List of Portraits in Harvard University*. Most of the above are issued by the Harvard University Press, which was formally established in 1913 for the publication of books of a scholarly character. There are, besides, a daily paper, a humorous periodical, and several literary publications conducted by the students.

The presidents of Harvard since its inception have been: Henry Dunster, 1640-54; Charles Chauncy, 1654-72; Leonard Hoar, 1672-84; Increase Mather, 1685-1701; Samuel Willard, 1701-07; John Leverett, 1708-24; Benjamin Wadsworth, 1725-37; Edward Holyoke, 1737-69; Samuel Locke, 1770-73; Samuel Langdon, 1774-80; Joseph Willard, 1781-1804; Samuel Webber, 1806-10; John Thornton Kirkland, 1810-28; Josiah Quincy, 1829-45; Edward Everett, 1846-49; Jared Sparks, 1849-53; James Walker, 1853-60; Cornelius Conway Felton, 1860-62; Thomas Hill, 1862-68; Charles William Eliot, 1869-1909; Abbott Lawrence Lowell, 1909-

HARVEST AND HARVESTING (AS. *harfest*, OHG. *herbst*, Ger. *Herbst*; probably connected with Lat. *carpere*, to pluck, Gk. *karpós*, *karpos*, fruit). The season and the process of gathering ripened crops. Formerly the terms were applied to the time of reaping and garnering cereals, but with the growth and extension of other branches of agriculture, especially in the fruit industry in America, they are more loosely applied, as "hay harvest," "cherry harvest," "potato harvest," etc. As in other agricultural lines, the development of the methods of harvesting has been marked, and during no period so strikingly as during the last half century. In former times the single-handed sickle and two-handed scythe, which appeared somewhat later, seem to have been the sole implements for cutting the stalks of grain. The cradle, a much more recent invention, consists of a scythe to the handle of which is fastened a set of three or more fingers of light but strong wood as long as the blade and parallel with it. A feature of primitive methods of harvesting was the gleaner, who went over the field to pick up the heads of grain overlooked by the reapers. Primitive methods of separating the grain from the straw and the chaff were not less crude than those of cutting.

The slow, laborious, uncleanly methods of the ancients have mostly disappeared among civilized peoples, but there are countries where the traveler may find them still in vogue, though perhaps somewhat modified. Even in sections of enlightened lands many of the modern implements and methods are unknown. But such cases are exceptional. The cradle has given place to the mower, which was at first used only in cutting grass for hay, but which genius soon developed into the reaper, adapted to cut grain and lay it in piles of convenient size for binding into sheaves. The same inventive spirit produced the self-binder, a still more highly modified mower, which not only does all the work of the reaper, but ties the sheaves with twine or wire. Yet more recently has appeared the heading machine, which, drawn by a score or more of horses or propelled across the field, severs only the heads of the plants, and delivers them into wagons driven beside the machines, and the combined harvester and thresher, which not only gathers the heads, but threshes and winnows the grain and places it in sacks ready for market. On many of the wheat farms of the western United States, more especially of the arid districts, this machine has supplanted not only the reaper, but the threshing machine, since it performs the office of each. Yet the threshing machine is still popular where grain must be allowed to stand in the shock to dry for a few days after cutting. A revolution has also taken place in haymaking. Hand labor has been reduced to a minimum. The mower has supplanted the scythe in cutting; the hay tedder, which tosses the grass as it lies in the field, has replaced the hayfork in curing; the hay loader,

drawn behind the wagon to be loaded, has largely taken the place of loading by hand forks, and the horse-power hayfork, which will dispose of a large load of hay in three or four forkfuls, has become a common implement on farms where stock raising or dairying is a leading feature.

In recent years much progress has been made in devising efficient machines for harvesting, binding, and shocking corn, also for picking corn from the stalks, husking the ears, and shredding the fodder. In fact, the methods of harvesting, so far as has been possible, have been improved to a remarkable extent, nearly every important crop having its special harvesting machinery. Cotton is the most notable exception; machines adapted to its irregular method of ripening seem impossible.

The introduction of improved harvesting machinery has done much to reduce the labor cost of production and increase the productive efficiency of the farmer. It has been maintained, e.g., that by the use of improved cultivating and harvesting machinery the labor required to produce a bushel of wheat has been reduced from three hours to 10 minutes. See **REAPERS**; **REAPING**.

No less remarkable have been the developments in methods of fruit harvesting. It is highly probable that in all countries methods were at first crude and wasteful. In America, during the first half of the nineteenth century, apples rarely arrived in market except in bulk by the wagon load, and peaches at first were treated no better. During the last half, reform has taken place; the former rarely arrive, except in local markets, in any other package than the barrel or box, and the latter, it is probable, never in bulk as formerly, but almost always in baskets or crates. In olden times when there was little or no market for fruits, except in the towns and their immediate neighborhood, the tree fruits were shaken or beaten to the ground—a method still popular with those apples the chief end of which is cider. But with the development of a fresh-fruit market, increased care was taken to avoid bruising. With increasing prosperity the demand for fine specimens increased, and the grower was compelled not only to produce a superior article, but he was forced to present it for sale in an attractive package. All details of modern fruit harvest depend upon the peculiar demands of the market, the distance the product must be shipped, the means of transportation, and the shipping qualities of the kind or the variety of fruit. These four factors determine the time of picking, which with perishable fruits, especially when sent to distant markets, is several days before maturity—a stage learned only by experience with the individual kind or even variety. In general, for shipping to distant markets, strawberries are gathered when they have colored well; red raspberries when they become soft; peaches when an experienced picker detects, with the ball of his thumb, a very slight softness of the tissue; plums while still too green to be pleasantly edible; pears when, upon lifting the fruit, the twig and the stem separate without either one breaking; apples when they readily part from the stem by a twist of the fruit. For local markets the fruit may be allowed to become riper. Again, these factors determine the style and size of the package and many other details which, since they properly belong to the sale of fruit rather than to harvesting, will be found

discussed under the title **MARKET AND MARKETING**. See also **HORTICULTURE**; **FRUIT, CULTIVATED**; and articles upon individual fruits. N. Casson, *The Romance of the Reaper* (New York, 1908); F. L. Greeno, *Obed Hussey: A True Record of his Greatest Invention, the Reaper* (Rochester, 1912).

HARVEST FISH (so called from the time of its annual appearance). An edible fish of the rudder-fish family (Stromateidae), also called butterfish, or dollar fish, and lafayette. The common northern species (*Rhombus triacanthus*) is about 7 inches in length, is related to and resembles in its compressed oval shape

SOUTHERN HARVEST FISH
(*Rhombus paru*).

the pompano, and when first taken from the water displays brilliant, shifting, iridescent colors. They are an excellent pan fish, tasting like mackerel, and are extensively caught off New Jersey and New England in midsummer (at harvest time). A southern species (*Rhombus paru*) ranges from Chesapeake Bay to Brazil, is greenish above and golden below, and is a favorite in the Virginia coast markets. Other species in the West Indies and California are highly prized.

HARVEST FLY. The popular name in the United States for several species of cicada, because they make their appearance in harvest. See **CICADA**.

HARVESTMAN, DADDY LONGLEGS, or GRANDFATHER GREYBEARD. An arachnid of the order Opiliones, or Phalangidea. These creatures are of world-wide distribution and are very common in most parts of the United States and in South America. One blind form inhabits Mammoth Cave, Kentucky. The majority of the family may be recognized by their short bodies and long, stilllike legs, bowed or elevated in the middle, so that the body of the insect is almost on the ground. They have a very characteristic and disagreeable smell. The eyes are two in number, and the mandibles are pincer-like. There is only one pair of spiracles on the lower side of the body at the junction of the cephalothorax and abdomen. The crane flies of the dipterous family Tipulidae are called daddy longlegs in Europe, and should not be confused with these arachnida. The harvestmen are said to feed on small insects, especially aphids; but C. M. Weed states that they are much more apt to feed on insects found dead than to kill living ones. They are abundant in woods and fields from middle summer until late autumn

and are likely to collect in sheds, outhouses, barns, and even houses, or on bare rocks or tree trunks. Very few species survive the winter as adults. Most of them lay their eggs in the ground in the autumn.

HARVEST MITE. See **MITE**.

HARVEST MOON. The full moon occurring nearest the date of the autumnal equinox (q.v.), September 22. The moon does not rise at the same time every night on account of her changing position in the sky caused by her orbital motion around the earth. Each night the rising is later; and the *retardation*, as it is called, averages about 50 minutes. In the latitude of New York the maximum retardation is 1 hour 17 minutes, and the minimum, 23 minutes. In higher latitudes the range of the retardation may be even greater, and the minimum retardation may descend to *nil*. The minimum retardation occurs when the moon is passing the first point of Aries, or once in each lunar month. If the retardation is a minimum at the time of full moon, there will be strong moonlight almost all night on several successive nights; for, the retardation being small, the moon will rise each night at nearly the same time as she does on the night of full moon. Now this state of affairs is realized when the sun is passing the first point of Libra, that is, at the autumnal equinox, and as in northern latitudes this falls during the time of harvest, the continuance of light after sunset is very useful to the farmers when gathering in their crops. Consequently this full moon is called the harvest moon. Similar conditions, but less marked, obtain at the next full moon, which, since it occurs during the hunting season, is called the hunter's moon.

HARVEY. A city in Cook Co., Ill., 20 miles south of the Chicago courthouse, on the Illinois Central, the Grand Trunk, the Chicago, Terre Haute, and Southeastern, and the Baltimore and Ohio Chicago Terminal railroads, and on the Calumet River (Map: Illinois, J 2). It is a residential suburb of Chicago and also an industrial centre. The city contains a Carnegie library. The principal manufactures include mining, oil-well, road, and ditching machinery, gas stoves, automobiles, aluminium ware, cement, whiting, telegraph and telephone supplies, railway cars, foundry equipment, electric travelers, and railroad supplies. Harvey was founded in 1891, incorporated as a village in 1892, as a city in 1895, and adopted the commission form of government in 1912. Pop., 1900, 5305; 1910, 7227.

HARVEY, ARTHUR (1834-1900). A Canadian journalist and statistician. He was born

at Hallsworth, Suffolk, England, and was educated in France, Holland, and at Trinity College, Dublin. He came to Canada in 1856, began newspaper work, and in 1859-61, when the Canadian Parliament was at Quebec, he was correspondent for the *Hamilton Spectator* and the *Montreal Gazette*. Afterward he was for a short time editor of the *Quebec Morning Chronicle*, then the chief Conservative journal in that province. In 1862-70 he was chief statistical clerk in the Auditor General's Department. *The Year Book and Almanac of British North America*, which he had founded in 1867, he edited until 1870, when he removed to Toronto and became manager of the Provincial Insurance Company and afterward of the Toronto Loan and Land Company. Harvey's mathematical and statistical knowledge was highly useful in framing sound insurance legislation for the Dominion of Canada. He was the author of numerous papers and articles on scientific and economic subjects. He was elected a fellow of the Royal Statistical Society, vice president of the Astronomical and Physical Society, and in 1890-93 was president of the Canadian Institute.

HARVEY, ELI (1860-). An American painter, sculptor, and critic, born at Ogden, Ohio. He studied under Lentz, Noble, and Rebisso at the Cincinnati Academy and under Lefebvre, Constant, Doucet, and other masters in Paris. Further studies in sculpture were made under Frémiet at the Jardin des Plantes. It was the influence of this latter training which counted most strongly in Harvey's success. Chiefly devoted to the sculpture of animals of the cat tribe, he is represented by the "Lioness" and "Maternal Caress," statues in the Metropolitan Museum, New York; by the sculptures in the Lion House of the New York Zoological Garden; and by other works in the museums of St. Louis, London, and Liverpool. He received a gold medal for painting at the Paris-Province Exposition (1900).

HARVEY, GABRIEL (c.1545-1630). An English author. He was born at Saffron Walden and educated at Cambridge, where he took his B.A. degree in 1570, and was elected fellow of Pembroke Hall a few months later and master of Trinity Hall in 1585. He passed most of his life at the university. He was involved with Robert Greene and Thomas Nash in one of the most notorious personal controversies of the time, to which his own contributions are specimens of the most abusive style of Elizabethan prose, witness his *Trimming of Thomas Nashe* (1597). He is best known as the friend of Sidney and of Spenser, who has celebrated him under the name of Hobbinol in the *Shepherd's Calendar*, and as a leading member of the school which vigorously endeavored to enforce upon Englishmen the strict rules of classical metre and dramatic construction. He asserted that he was the first English poet to naturalize the dactylic hexameter, and he induced Spenser to abandon for a time the use of rhyme. Consult his *Works*, edited by A. B. Grosart, privately printed in eight volumes (London, 1884-85), and *Letter Book*, edited by Scott (ib., 1884).

HARVEY, SIR GEORGE (1806-76). A Scottish historical, genre, and landscape painter. He was born at St. Ninians, near Stirling, and studied in the school of the Trustees' Academy, Edinburgh, under Sir William Allan. In 1826, when the Royal Scottish Academy was instituted, he was elected an associate, though only

20 years old, and in 1829 an academician. Harvey was the most truly national of Scottish genre painters and has depicted more aspects of Scottish life than any other painter. His training was deficient, and, owing to the use of bituminous colors, many of his pictures are practically ruins. They are widely known through engravings. The most important include: "Covenanters Preaching" (Glasgow Museum); "Communion of the Covenanters" (National Gallery, Edinburgh); "Quitting the Manse," "Sabbath in the Glen," a series of school pictures (National Gallery, Edinburgh); besides others in a joyous vein, such as "The Curlers" and "The Village Bowlers" (National Gallery, Edinburgh). At 60 he began landscape painting, particularly of the Highland country, of which he depicts the peaceful and intimate phases. The best known of his landscapes are "The Enterkin"; "A Drove Road" (Glasgow Museum); "Glen Dhu, Arran"; "Scenery in the Highlands." He published *Notes on the Early History of the Scottish Academy* (1873) and *Recollections* (1888). Consult McKay, *The Scottish School of Painting* (London, 1906).

HARVEY, GEORGE (BRINTON MCCLELLAN) (1864-). An American editor and publisher. He was born at Peacham, Vt., and was educated at Peacham Academy. Between 1882 and 1886 he was reporter for the *Springfield Republican*, the *Chicago News*, and the *New York World*. He served as insurance commissioner of New Jersey in 1890-91, held the managing editorship of the *New York World* in 1891-93, and was constructor and president of various electric railroads in 1894-98. In 1899 he purchased the *North American Review*, which he edited thereafter, also editing *Harper's Weekly* from 1902 to 1913; in 1903 he bought the *Metropolitan Magazine*. He became president of Harper and Brothers in 1900 and a director in several corporations. He published *Women* (1908) and *The Power of Tolerance, and Other Speeches* (1911).

HARVEY, SIR JOHN. A Colonial Governor of Virginia. He first visited the province as one of the commissioners sent out by James I in 1623 to get evidence which would justify him in suppressing the Virginia Company. Appointed Governor after Yeardley's death, he began his administration in 1630 and soon made himself thoroughly detested by the colonists, for he not only favored the interests of individuals, such as Lord Baltimore, at the expense of Virginia, but filled his own pockets by imposing unusual fines on the settlers, all fines being by royal warrant a perquisite of the Governor's. In 1635 an assembly was called to hear complaints against him, and on April 28 the council met and decreed "Sir John Harvey thrust out of his government, and Capt. John West acts as Governor till the King's pleasure known." Harvey was put aboard a ship and sent to England in charge of two members of the House of Burgesses. Charles I reinstated him and refused even to listen to the delegates who had been sent over to present the case of the colonists. Two years after his return to Virginia, however, the King relieved him and appointed a new Governor in his place.

HARVEY, SIR JOHN (1778-1852). A British soldier. He entered the army at a very early age and saw service in many parts of the world. In 1812 he was appointed deputy adjutant general of the army in Canada and was

received with great favor by Sir George Prevost, who asked his advice on the defense of the wide frontiers of Canada against the United States forces. He was present at the unsuccessful defense of Fort George (May 27, 1813), but escaped with General Vincent and most of the British troops. On June 6 he led an attack on General Dearborn's forces at Stony Creek and later in the year was adjutant general of the British army at the battle of Chrystler's Farm. Upon the close of the War of 1812 he returned to England and at the battle of Waterloo was on the staff of the Duke of Wellington. In 1836 he was once more in America, this time as Governor of Prince Edward Island. From 1837 to 1841 he was Lieutenant Governor of New Brunswick, and in 1846 was appointed Governor and commander in chief of Newfoundland, but remained there only a short time before he was made Lieutenant Governor of Nova Scotia, which office he held until his death. Consult Kingsford, *The History of Canada*, vol. viii (Toronto, 1895).

HARVEY, JOHN MARTIN (1867-). An English actor manager, born at Vyvenhoe, Essex. He was educated at King's College, London, and studied elocution under John Ryder. His first appearance on the stage was in 1881 at the Old Court Theatre under John Clayton. In 1882 he joined Sir Henry Irving, with whom he played for many years, and whom he accompanied on various tours to the United States. Later he was successively manager of the Lyceum, Prince of Wales, Court, Apollo, and Royalty theatres, producing *The Only Way* (1899); *Hamlet* (1904); *The Corsican Brothers* (1907); *The Last Heir* (1908); *The World and his Wife* (1909); *Richard III* (1910); *The Lowland Wolf* (1911); *Edipus Rex* (1912); *The Taming of the Shrew* (1913); *The Faun* (1913). In 1914 he planned a tour of Canada, but owing to the war in Europe his plans were changed; instead he toured England, taking occasion at the end of his evening's play to deliver patriotic addresses to the audience, calling on young men to join the new army of Lord Kitchener.

HARVEY, MOSES (1820-1901). A Canadian author, born near Armagh, Ireland, and educated at Belfast College in arts and theology. In 1852, he left his charge in Maryport, Cumberland, England, and became pastor of the Free Presbyterian Church of St. John's, Newfoundland, from which he retired in 1878. Harvey made special studies of the geography and history of Newfoundland, contributed to the *Encyclopædia Britannica* (9th ed.) articles on "Seal Fisheries," "Newfoundland," and "Labrador," and published: *Poetry and Literature of the Bible* (1852); *Lectures, Literary and Biographical* (1864); *Comack's Journey across Newfoundland* (1873); *Across Newfoundland with the Governor* (1879); *Newfoundland, the Oldest British Colony* (1883); *Where Are We and Whither Tending?* (1886); *Text-Book of Newfoundland History* (2d ed., 1890); *Artificial Propagation of Marine Food Fishes* (1892); *Newfoundland As It Is* (1894); *Newfoundland in the Jubilee Year* (1897); *Newfoundland in 1900* (1900); *Newfoundland at the Beginning of the Twentieth Century* (1902).

HARVEY, SIR ROBERT (1847-). An English mining engineer and financier. He was born and educated at Truro, became a mining engineer in Bolivia, made important contributions to the manufacture of iodine, went to Peru

as engineer for nitrate works, and was inspector general of the Tarapacá nitrate fields until 1881. Then he formed the firm of North and Harvey, manufacturers of iodine and nitrate, and became one of the great South American capitalists, with interests in the Arauco Company, the Antofagasta (Chile) and Bolivia Railway, the Anglo-South American Bank, etc. He was high sheriff of Devon in 1896-97, and then of Cornwall, and was knighted in 1901.

HARVEY, WILLIAM (1578-1657). An English anatomist, celebrated as the discoverer of the circulation of the blood. He was born at Folkestone, in Kent, of a London family of great respectability. When he was 14 years old, he was sent to Caius College, Cambridge, where he was admitted as a pensioner in 1593. After five years' study at the university he traveled through France and Germany and decided to study medicine at Padua. Here he came under the influence of some of the best teachers of the time, notably Fabricius (q.v.). From this master the young student learned of the existence of the valves in the veins. Having obtained his medical degree in 1602, he returned to England and began to practice his profession in London. He was admitted a candidate of the London College in 1604 and was elected a fellow in 1607. Two years later he was appointed physician to St. Bartholomew's Hospital and in 1615 was made professor of anatomy and surgery. His discovery of the circulation of the blood he perfected in 1616. He was appointed physician extraordinary to James I in 1618 and was physician to Charles I from 1632 to 1646. He accompanied the King in the battle of Edgehill in 1642, and during this engagement the Prince and the Duke of York were intrusted to his care. In 1645 he was, by the royal mandate, elected warden of Merton College, succeeding Dr. Nathaniel Brent. During his residence at Oxford he made many experiments, and pursued researches connected with the subject of generation. In 1640, upon the surrender of Oxford to Parliament, he went to practice his profession in London. In 1651 the results of his investigations on the development of the chick, in which he was assisted by Rev. George Bathurst of Trinity College, were given to the world. In 1653 Harvey built a library and museum, which he presented to the members of the College of Physicians. He resigned his professorship of anatomy and surgery in 1653, at the age of 75, and he died on June 3, 1657, of paralysis, which succeeded several years of suffering from gout.

Harvey's description of the course and circulation of the blood met with great opposition, and the ridicule and unwarranted attacks resulted in a great diminution of his practice. In time, however, he had the satisfaction of seeing his doctrine accepted entire; but the labor and devotion of 25 years were requisite for the attainment of the final result. Six diagrams giving views of the circulatory system of the human body, life-size, with which Harvey illustrated his lectures, are still preserved in the museum of the Royal College of Physicians. Previous to Harvey's time it was believed that the blood was constantly in motion, but the arteries were believed to contain air only, because they were found to be empty after death. Others were close to the discovery of the course of the blood, but it was reserved for Harvey to comprehend and elucidate the whole matter.

Although he communicated his discovery to his pupils as early as 1619, it was not till 1628 that his work *Exercitatio de Motu Cordis et Sanguinis in Animalibus* was published at Frankfort, as a small quarto of 72 pages, called by Haller *Opusculum Aureum*. The best edition of it was published at Leyden (1739). Among other works are his *Exercitationes de Generatione Animalium, quibus Accedunt Quædam de Partu, de Membris ac Tumoribus Uteri, et de Conceptione* (c.1651; also Leyden, 1737); and *Exercitationes Duæ Anatomicæ de Circulatione Sanguinis* (Oxford [?], c.1645). A complete edition of Harvey's works in Latin was published in 1766 by the College of Physicians of London, including his *Treatise on the Circulation*, with the prefaces of the first edition of 1628; his *Exercitationes* addressed to Riouan; his work on the *Generation of Animals*; the *Account of the Dissection of Thomas Parr*; and *Nine Epistles of Harvey* addressed to various persons; together with a copy of the diploma of doctor of medicine conferred upon Harvey by the University of Padua. Prefixed to this collection of his works is a *Life of Harvey* by Lawrence. Consult Willis, *Life of Harvey* (London, 1881). See PHYSIOLOGY.

HARVEY, WILLIAM HENRY (1811-66). An Irish botanist, born at Summerville, near Limerick. He received the bent towards his specialty from the schoolmaster with whom he studied in Kildare. As a field naturalist, he began his researches in his native land, but they extended to South Africa (1835-42), and for the last 10 years of his life he was professor of botany in Dublin University. Travels in America, India, Australia, and the South Seas had augmented his botanical knowledge, and he was an authority especially in algar, though he disputed the Darwinian hypothesis. He published a *Manual of British Algae* (1841); *Phycologia Britannica, a History of British Seaweeds* (1846-51); *Nereis Boreali-Americana* (1852-58); *Phycologia Australica* (1858-63); and other works.

HARVEYZEYED STEEL, HARVEY PROCESS. See ARMOR PLATE; CANNIARDENING.

HARWICH, hār'wĭj. An ancient seaport, market town, and municipal borough in Essex, England, at the mouth of the Stour, on the North Sea, 70 miles northeast of London (Map: England, II 5). Its important industries are fisheries, shipbuilding, and cement and manure manufacturing. Its coasting and foreign trade with Germany, Denmark, and Holland is considerable. It exports cement, fish, manure, ironware, machinery, leather, etc., and imports grain, silk, woolen and cotton goods, timber, and tobacco. The harbor is commodious, safe, and strongly fortified. Harwich is one of the chief ports in England for passenger traffic with the Continent. Parkstone Quay, 2 miles from the town, is the terminus of the Great Eastern Railway steamers, which ply twice daily between the town and Antwerp and also the Hook of Holland. There are other lines in communication with Hamburg, Amsterdam, Rotterdam, Esbjerg, and Copenhagen. In 1912 the total net tonnage of vessels entered and cleared in foreign and colonial commerce was 1,936,111 tons, and the combined value of the imports and exports was \$168,906,000. The town is pleasantly situated on an elevated promontory and is a small sea-bathing resort. It has tramways and is supplied with water, gas, and electric light.

ing. Harwich was a Roman station and a great Danish military depot. In 885 it was the scene of a great naval conflict between the Danes and King Alfred's fleet and in 1066 of another between the Dutch and English. It was made a parliamentary and municipal borough by Edward II in 1318. Pop., 1901, 10,019; 1911, 13,623.

HARWOOD, ANDREW ALLEN (1802-84). An American naval officer, born at Settle, Pa. In 1818 he was appointed a midshipman in the navy. In 1819-23 he served in the sloop of war *Hornet*, which was engaged in suppressing the slave trade on the west coast of Africa and piracy in the West Indies. In 1844 he was made a member of a commission to visit dockyards in England and France and report on ordnance improvements. He became a lieutenant in 1827, commander in 1848, captain in 1855, and commodore in 1862. During the Civil War he served as chief of the Bureau of Ordnance, in command of the Potomac flotilla, commandant of the Washington Navy Yard, and secretary of the Lighthouse Board. He retired in 1864, but was promoted to rear admiral on the retired list in 1869 and continued on duty until 1872. He published *Law and Practice of United States Navy Courts-Martial* (1867) and edited *Summary Courts-Martial*.

HARZER, hār'tsēr, PAUL HERMANN (1857-). A German astronomer, born at Grossenhain (Saxony). After study in Leipzig, Berlin, and Rome, he was assistant at the Leipzig Observatory from 1878 to 1881, was appointed observer there in 1882, and in the same year became a lecturer in the university. From 1887 to 1897 he was director of the Archducal Observatory at Göttingen and in the latter year was appointed director of the Kiel Observatory, where he was also rector of the university in 1908-09. In theoretical astronomy he made numerous investigations of importance, results of which appeared at various times in scientific journals, particularly in the *Astronomische Nachrichten*, his contributions to which include: "Eine neue Methode die negativen und ungeraden Potenzen der Entfernungen der Himmelskörper zu entwickeln" (vol. cii, 1882) and "Untersuchung über die astronomische Strahlenbrechung auf Grund der Differentialgleichungen der elastischen Lichtbewegungen in der Atmosphäre" (vols. civ, cvii, 1882, 1883). He also wrote *Die exakten Wissenschaften im Alten Japan* (1905); *Ueber die geometrische Methode zur Bestimmung der Bahnen von Himmelskörpern nach fünf Beobachtungen* (1910).

HARZ (hār'ts) MOUNTAINS. An isolated mountain range in north Germany, extending between the rivers Saale and Leine, through Prussia, Brunswick, and Anhalt (Map: Germany, D 3). Its length from Mansfeld on the southeast to Seesen on the northwest is about 60 miles and its total area about 900 square miles. The range, formed by a flatly arched uplift, rises sharply from the surrounding plain and is dissected by numerous stream valleys. The Upper Harz, comprising the northwestern section, has an elevation of from 1000 to 3000 feet, and culminates in the Brocken, 3747 feet. In the southeast, or Lower Harz region, the elevations rarely exceed 1000 feet. The mountain slopes of the Upper Harz are heavily wooded with pine, oak, and beech; but the summits, owing to the raw climate, support only a stunted growth of vegetation. The Lower Harz is to a great extent denuded of woods and given over

to agriculture. The higher peaks are enveloped in fog during a large part of the year, and the rainfall is heavy. Geologically the range consists of Devonian and Carboniferous strata, which have been penetrated by eruptive granites, diabase, and porphyry, as the Brocken. The mineral resources are of great importance, copper, silver, lead, and iron being produced at several localities. Mining was carried on as early as the twelfth century, but the deposits are still far from exhausted. Clausthal, in the Upper Harz, is the seat of a famous mining academy. The region is well patronized by tourists, being penetrated by several railroads, as it is rich in historic and legendary interest as well as in scenery. Consult: H. Heine, *Die Harzreise* (Hamburg, 1853); H. J. Forman, *In the Footprints of Heine* (New York, 1910); Friedrich Günther, *Der Harz* (2d ed., Bielefeld, 1910). See BROCKEN.

HARZ EISE, hār'ts'ri-ze, DIE (Ger., journey through the Harz). A celebrated autobiographical narrative by Heinrich Heine (1824).

HASAN. See BENI HASAN.

HASAN, hā'san, AND HUSAIN, hū-sain'. Two grandchildren of Mohammed, sons of his youngest daughter, Fatima, and Ali. After the assassination of Ali (q.v.) his adherents at Cufa recognized his eldest son, Hasan, as caliph, while Muawiya asserted his claim to the entire Moslem Empire and gathered a powerful army to invade Irak. Hasan, a man of little courage, with more taste for the harp than the camp, agreed to abdicate at the first taste of war and retired to Medina (661). He was poisoned by one of his wives eight years later. On the death of Muawiya (680) the people of Cufa made overtures to Husain, who was then at Mecca visiting him, to claim the caliphate in opposition to Yazid, Muawiya's son. With a small force he proceeded to Irak. Yazid, well informed of the movement, had made ample preparations to receive him, and he was slain at Kербela on the 10th of Muharram, 681. The fate of the house of Ali made a deep impression on the Moslem world. The Shiites (see MOHAMMEDAN SECTS) still refuse to recognize the claims to the caliphate of any except Ali and his sons. They observe the 10th of Muharram as a day of mourning and devote the nine preceding days of the month to the memory of the martyrs. The so-called "miracle play," a dramatic representation of the history of Husain, is given, and the spectators become wrought up to the most extravagant expressions of sorrow and the highest pitch of fanatical enthusiasm. In one of its forms the play lasts for the entire 10 days, culminating on the last day in the representation of the death of Husain. Consult: Muir, *Annals of the Early Caliphate* (London, 1891); Pelly, *The Miracle Play of Hasan and Husain, Collected from Oral Tradition* (ib., 1870); Müller, *Der Islam im Morgen- und Abendland* (Berlin, 1885); Wellhausen, *Das arabische Reich und sein Sturz* (ib., 1902).

HASAN BEN SABBAAH, hās'an ben sabbāh. The founder of the sect of the Assassins (q.v.).

HAS/CALL, MILO SMITH (1829-1904). An American soldier, born in Genesee Co., N. Y. In 1846 he moved to Goshen, Ind., and two years later was appointed a cadet at the United States Military Academy, graduating in 1852. After two years' service in the regular army he resigned his commission and went back to

Goshen, where he became a lawyer and filled various political offices. At the outbreak of the Civil War he enlisted as a private, but was soon appointed aid-de-camp to General Morris, with the rank of captain, and assisted in organizing six volunteer regiments. On June 12, 1861, he was made colonel of the Seventeenth Indiana Volunteers and took part in the successful West Virginia campaign. He was commissioned brigadier general of volunteers on April 25, 1862. Having been transferred to the Army of the Cumberland, he was put in command of a brigade which fought through the Tennessee campaign (October, 1862, to March, 1863). At the battle of Murfreesboro (Dec. 31, 1862, to Jan. 3, 1863) he had command of the Sixth Division under Major General Crittenden. From June to August, 1863, he was in command of the District of Indiana, and afterward commanded a division in the Army of the Ohio, which took part in the defense of Knoxville (November to December, 1863). The next year he commanded the Second Division of the Twenty-third Army Corps in the Army of the Ohio during the invasion of Georgia. He resigned on Oct. 27, 1864, and returned to Goshen, where he engaged in banking, but later entered the real-estate business in Chicago.

HASCHKA, hiš'h'kà, LORENZ LEOPOLD (1740-1827). An Austrian poet, born at Vienna. In 1798 he became professor of esthetics in the Theresianum; he was custodian of the university library and wrote many lyrics, of which the best known is the Austrian national hymn, "Gott erhalte Franz den Kaiser," set to music by Haydn.

HASDEU, hiš-dé'oo, BOGDAN PETRICEIOTU (1838-1907). A Rumanian poet, historian, and philologist, born at Khotin (Bessarabia). He taught history in the Gymnasium of Jassy and in 1878 became professor of comparative philology and director of the national archives at Bucharest. His literary labors include dramas, satiric romances, and editorial work, especially on the *Revista Noua* and the philological and historical periodical *Columna lui Traian* (1870-77). The most important of his philological works are *Etymologicum Magnum Romanie* (1887-98, unfinished) and *Cuvenite dom Bătrâni* (1878-79). His philological writings evince a vast amount of learning, but many of his theories lack a scientific foundation.

HASDRUBAL (Phœnician, whose help is Baal, Gk. Ἀσδρούβας, *Asdroubas*). A name of frequent occurrence in Carthaginian history. The more important persons who bore the name were: 1. Son of Hanno, a general during the First Punic War, who took the field against Regulus in 256 B.C. and met with signal defeat. He was afterward sent to Sicily with a large army and 140 elephants, but accomplished nothing during a two years' stay in the island and was at length totally overthrown at Panormus (Palermo) by the Roman consul Metellus in 250 B.C. and on his return to Carthage was put to death for his lack of generalship. 2. Son-in-law of the great Hamilcar Barca (q.v.), an important statesman of the period between the First and Second Punic wars and a constant ally of his father-in-law and the popular party in Carthage. After demonstrating his military ability in several minor campaigns, he received the chief control in Spain (228 B.C.), where he soon proved his still greater administrative and diplomatic power. He founded the city of

Carthago Nova (Cartagena) as a port of communication with the mother city and also as a convenient centre for the business of the silver mines which contributed immensely to the Carthaginian resources; and he was so successful in winning over or subduing the Spanish tribes that he brought almost the whole peninsula under his sway. He was assassinated by a revengeful slave in 221 B.C. 3. Son of Hamilcar Barca, and brother of the great Hannibal (q.v.), who left him in command in Spain when he began his famous march across the Alps to Italy (218 B.C.). For several years he carried on operations in Spain against the Roman forces under the two brothers, (Gnaeus Scipio and Publius Scipio, but without decisive results, although supported by reinforcements under Himilco, Mago, and Hasdrubal, son of Gisco (see 4, below). In 212, however, he gained a great victory over the Romans, in which Publius Scipio was slain; but the Romans regained the advantage in the following year by the capture of Carthago Nova, the enemy's base of supplies. Shortly after, Hasdrubal gathered a greater force with the intention of following Hannibal's example and invading Italy. He crossed the Alps in 207 B.C. and laid siege to Placentia (Piacenza)—a fatal step, as delay gave the Romans an opportunity to attack him before he could join Hannibal. A bloody battle was fought on the banks of the Metaurus, and Hasdrubal fell in the thick of the fight. His head was thrown into Hannibal's camp as evidence of his defeat. (Consult Oehler, *Der letzte Feldzug des Barkiden Hasdrubals*, Berlin, 1897, and Lehmann, *Die Angriffe der drei Barkiden auf Italien*, Leipzig, 1905.) 4. Son of Gisco, mentioned above as one of the generals sent to Spain to assist Hasdrubal No. 3. Afterward he took charge of the military operations in and around Carthage; and when Scipio Africanus Major came into Africa with a large army (204 B.C.), the diplomacy of Hasdrubal won the assistance of Syphax, the Numidian King, which Scipio also had endeavored to gain. (See *SORUONISBA*.) But the allied forces were mercilessly annihilated by Scipio, who hemmed them within their burning camp; but few, including the two generals, escaped. Hasdrubal met a violent death in Carthage for his failure. 5. A general of the Third Punic War. For his failure in war against the Numidian King Masinissa, he had been banished from Carthage, but was recalled to take the command in the last struggle against Rome (149 B.C.). His arbitrary and despotic methods alienated many from him, and, notwithstanding the heroism of the defenders, the persistence of the Roman attack led to the fall of Carthage (146 B.C.), when Hasdrubal fled to Scipio's camp and was made prisoner. He was led in triumph at Rome and allowed to pass his remaining days in obscurity in Italy.

HASE, hā'ze, KARL AUGUST VON (1800-90). An eminent theological writer of Germany. He was born at Steinbach in Saxony, Aug. 25, 1800, and studied theology at Leipzig and Erlangen. He became in 1823 privatdozent at Tübingen, but was for political reasons confined for 10 months in the fortress of Hohenasperg, during which time he produced a theological novel, *Die Proselyten* (1827), and a *Lehrbuch der evangelischen Dogmatik* (1826; 6th ed., 1870). Released in August, 1825, he went to Dresden and did literary work. In 1828 he became privat-

docent at Leipzig and in 1829 professor of philosophy in Jena, where his lectures on dogmatics and the life of Christ proved especially attractive. He attempted to bring theology into harmony with modern thought and at the same time keep the warmth of religious life. His *Leben Jesu* (1829; 5th ed., 1865; trans., *The Life of Jesus*, 1881), which appeared six years before Strauss's, proposed as its aim to show "how Jesus of Nazareth, according to divine destination, by the free act of His own spirit, and by the opportunities of His time, became the Saviour of the world." He opposed modern supernaturalism in *Die Leipziger Disputation* (1827) and extreme rationalism in *Theologische Streitschriften* (1834-37) and *Die Tübinger Schule* (1855). His *Hutlerus Redivivus* (1827; 10th ed., 1862) seeks to do justice to the old Lutheran dogmatics in contrast with modern systems, by exhibiting its harmonious completeness. Besides his *Lehrbuch der Kirchengeschichte* (1834; 12th ed., 1900), which has been translated into English (*A History of the Christian Church*, from the 7th ed., New York, 1855), Hase treated special portions of Church history in *Die beiden Erzbischöfe* (1839); *Neue Propheten* (1851); *Franz von Assisi* (1856); *Das geistliche Schauspiel* (1858; trans., *Miracle Plays and Sacred Dramas*, 1880); *Handbuch der protestantischen Polemik gegen die römisch-katholische Kirche* (1862; 4th ed., 1886). He also published several works on ecclesiastical law; an edition of the *Libri Symbolici Ecclesiae Evangelicae* (1827); and *Ideale und Irrthümer* (1872). After his death three volumes of political and theological papers were published (1891-92).

HASE, hā'ze, KARL BENEDICT (1780-1864). A German classical scholar, born at Sulza, near Weimar. He studied at Jena and Helmstedt and in 1801 went to Paris, where he was put in charge of the manuscripts of the Imperial Library (1805), was appointed professor of Greek paleography and of modern Greek at the Ecole des Langues Orientales (1816), then professor of German at the Polytechnic Institute (1830), conservator of manuscripts in the library (1832), and, in 1852, professor of comparative grammar in the University of Paris. He was long an editor of the *Journal des Savants*; contributed much to Dindorf's edition of Stephanus' *Lexicon* (1831-44); edited Leo Diaconus (1819), Valerius Maximus (1823), Suetonius (1828), and the fragment, *De Ostitis et Mensibus*, by Laurentius Lydus (1823); and by his wide knowledge of late Greek greatly facilitated the publication of *Recueil des historiens des croisades* (1875). Consult Guignaut, *Notice historique sur la vie et les travaux de Carl Benedict Hase* (Paris, 1867), and Haine, *Hases Briefe von der Wanderung und aus Paris* (Leipzig, 1894), a vivid autobiographical account of the hardships of Hase's earlier years.

HASENAUER, hā'ze-nou'ër, KARL, BARON VON (1833-94). An Austrian architect, born in Vienna, where he studied at the academy under Van der Nüll and Siccardsburg and obtained the first prize in 1854. After extensive travels in Germany, Italy, France, England, and Scotland, he returned to Vienna, was again awarded the first prize for architecture at the art exhibition of 1864, became a member of the Academy of Fine Arts in 1866, and honorary member of the Institute of British Architects in 1868.

He designed the Palais Lützow, one of the finest houses in Vienna, but his most important work was the erection of the magnificent Imperial Museums of Art and Natural History (1872-84) in purest Renaissance style, after his own and Semper's designs. He also built the new Hofburg theatre (completed 1888) and designed the addition to the Imperial palace. He was architect for the buildings of the Vienna Exposition in 1873 and was raised to a barony in the same year.

HASENCLEVER, hā'zen-klā'vër, JOHANN PETER (1810-53). A German genre painter, born at Remscheid. He studied under Schadow, at the Düsseldorf Academy, and then spent some years in Munich and Italy. After 1842 he settled in Düsseldorf. His works are usually humorous genre subjects, such as "A Family Quarrel" (1837), New Pinakothek, Munich; "Tasting Wine" and "The Reading Room" (1843), both in National Gallery, Berlin; "Toppers in the Wine-Cellar" (1847), Ravené Gallery, Berlin. He also executed a series of scenes from Körtum's *Jobsiade*, including "The Examination" (1840), New Pinakothek, Munich; "The School" (1846) and "Jobs as Night Watchman" (1852), both in Ravené Gallery, Berlin. His "Gaming-Table" is his most important work of a serious nature.

HASENCLEVER, WILHELM (1837-89). A German Socialist agitator, born in Arnsberg, Westphalia. He received his education at the Gymnasium of his native city and then became a tanner. In 1862 he was chosen editor of the *Westfälische Volkszeitung*, in 1871 president of the Allgemeiner Deutscher Arbeiterverein, and in 1875 presiding officer of the newly organized Socialist-Labor party of Germany. He was elected to the Reichstag several times and controlled or edited various Socialist newspapers.

HASENPFLUG, hā'zen-plūg, KARL (1802-58). A German architectural painter. He was born in Berlin, the son of a shoemaker. After a hard struggle in early life, he became the pupil of the decorative painter Karl Gropius, and a few years later was enabled by a royal stipend to study at the academy. Attracted by the mediæval architecture of Halberstadt, he made his home there in 1830 and, besides cathedrals, painted chiefly views of ruined castles and convents, which appealed to a large public by their poetic charm. Especially noteworthy among his works are two views of Cologne Cathedral (1832-33) and three views of and in Halberstadt Cathedral (1828-36, National Gallery, Berlin). He is also represented at Hamburg, Bremen, Hanover, Vienna, and in various German provincial museums.

HÄSER, hā'zër, HEINRICH (1811-85). A German medical author, born at Rome, the son of the musician August Ferdinand Häser. He studied medicine at Jena, taught there from 1836 to 1849, then went to Greifswald and in 1862 to Breslau. He edited: Gruner, *Scriptores de Sudore Anglico* (1847); a *Bibliotheca Epidemographica* (2d ed., 1862); the *Repertorium für die gesamte Medizin* (1840-42); the *Archiv für die gesamte Medizin* (1840-49); and wrote: *Historisch-pathologische Untersuchungen* (1839-41); *Lehrbuch der Geschichte der Medizin und der Volkskrankheiten* (3d ed., 1875-82); *Geschichte der christlichen Krankheitspflege und Pflégerschaften* (1857); *Die Vaccination und ihre Gegner* (1854); *Grundriss der Geschichte der Medizin* (1884).

HASHISH, hāsh'esh (Ar. *hashishat*, from Ar. *hashish*, herbage, hay, from *hashsha*, to cut grass). The Oriental name of the flowering tops and tender parts of Indian hemp (*Cannabis indica*). Various preparations of the plant are employed for the producing of a peculiar intoxication. A favorite mode of extracting its active principle is by boiling the tops and flowers with water to which butter or oil has been added, evaporating, and thus forming an oleaginous solution or fatty extract. This fatty extract is frequently mixed with other substances which are reputed to possess aphrodisiac properties and is taken in the form of electuary confection, or pastile. The majoon used at Calcutta, the mapouchari employed at Cairo, and the dawames or dawamesk of the Arabs, are preparations of this kind. In India it is employed as a narcotic stimulant under the names hashish, churrus bhang, siddhi, and gunjah. American hemp (*Cannabis americana*) possesses a similar but weaker action. The effect of hashish depends largely upon the individual. Among the Orientals the dreams are often of an erotic character, but this is not so among the western nations. One of the first appreciable effects of the drug is the gradual weakening of the powers of controlling and directing of the thoughts. Then comes the stage already described; and accompanying, and in part following it, there are observed errors of sense, false convictions, and the predominance of one or more extravagant ideas. These ideas and convictions are generally not altogether of an imaginary character, but are suggested by external impressions which are erroneously interpreted by the perceptive faculties. A minute may seem a year, and an hour only an instant. Sounds may be greatly exaggerated. The sense of duration of time and extent of space and the appreciation of personality are lost; there is a sensation of weight in the extremities, and anesthesia of the skin, which may often become complete. Finally, if the dose is sufficiently powerful, there is marked drowsiness and sleep. The drug is used as a sedative as a substitute for opium. For the relief of pain in neuralgia and migraine, it has been successfully used. It is a valuable hypnotic in delirium tremens and a useful remedy for functional impotence and certain uterine disorders.

HASIDÆ'ANS. A Jewish sect. See CHASIDIM.

HASKELL. A city and the county seat of Haskell Co., Tex., 165 miles (direct) west by north of Fort Worth, on the Wichita Valley Railroad (Map: Texas, C 3). The leading industries are farming and stock raising and the manufacture of cotton goods and cotton-oil products. The water works are owned by the city. Pop., 1910, 2436.

HASKELL, ELLA (KNOWLES) (1865-1911). An American lawyer and public official, born at North Ridge, N. H. She studied law and was admitted to the bar. As Miss Knowles, she moved to Montana, became active in politics, and was candidate for Attorney-General on the Populist ticket in 1893, opposing Henry J. Haskell, a Republican. Haskell won the election. She became his assistant and later married him, but a few years later obtained a divorce. Then, having opened a law office in Butte, Mont., she won many notable mining cases and became known as one of the foremost women lawyers in the United States. She was active in wo-

man's club work and was a student of Oriental philosophies.

HASKELL, MELLEN WOODMAN (1863 -). An American mathematician, born at Salem, Mass. He graduated from Harvard University in 1883 and (Ph.D.) from the University of Göttingen in 1889. He served as an instructor in mathematics in 1889-90 at the University of Michigan, and as assistant professor in 1890-94, associate professor from 1894 to 1906, and professor after 1906 at the University of California, where he was also dean of the College of Social Sciences (1899-1900) and of the College of Letters (1900-01). He became known especially for his work in modern analytic geometry. He was a member of the Council of the American Mathematical Society in 1907-09, and vice president in 1913.

HASLER, hās'lër, or HASSLER, HANS LEO VON (1564-1612). A German composer, one of the founders of a national German music, born at Nuremberg. He studied with his father, Isaac Hasler, town musician, and in 1584 with G. Gabrieli at Venice. He was the first important German composer who studied in Italy, and his works, despite their originality, were influenced by the Italian style. From 1585 to 1601 he was organist to Count Octavianus Fugger at Augsburg; in the latter year he received the post of court musician at Prague to Emperor Rudolph II. In 1608 he accepted an appointment at the court of the Elector of Saxony. His compositions are of great value in the history of music. Consult A. Sandberger, *Bemerkungen zur Biographie Hans Leo Hasslers und seiner Brüder* (Leipzig, 1905).

HASLINGDEN, hāz'ling-den. A manufacturing and market town in Lancashire, England, 4 miles south-southeast of Accrington (Map: England, D 3). It has manufactures of cottons, silks, woolsens, sizing of cotton warps, and iron and engineering works. In the neighborhood are coal mines, brick fields, and extensive stone quarries. Situated in a hilly district near the Forest of Rossendale, it derives its name, signifying "Hollow of the Hazels," from the neighboring trees. Its church, restored in 1879, dates from the thirteenth century and has handsome endowed schools attached. Pop., 1901, 18,500; 1911, 18,723.

HASMONÆ'ANS. See MACCABEES.

HASNER, hāz'nër, LEOPOLD, VON ARTHA (1818-91). An Austrian statesman and jurist, born at Prague. He studied law at Prague, was appointed professor of the philosophy of law there (1849) and then of political economy (1851), and was elected to the Bohemian Diet and the Austrian House of Deputies in 1861. Two years afterward he was made President of the latter body and head of the Council of Education. In 1865 he became professor of political economy in the University of Vienna; in 1867 he was called to the Austrian House of Peers, of which he was a member for the rest of his life; in 1868 he was appointed Minister of Public Instruction; and for a short time in 1870 he was President of the Ministry. He resigned, but became active as a leader of the Liberal Centrist party in the Upper House. The Austrian public-school system in its present form is a product of his labors. In 1893 a monument was erected in his memory at Iachl, where he died. He wrote: *Philosophie des Rechts und seiner Geschichte in Grundlinien* (1851) and an unfinished *System der politischen Oeko-*

nomie (1861). Consult his posthumously published *Denkwürdigkeiten: Autobiographisches und Aphorismen* (Stuttgart, 1892).

HASPINGER, hās'ping-ēr, JOACHIM (1776-1858). A Tyrolese patriot, born at Sankt Martin im Gaisess. He studied at Bozen and Innsbruck, fought against the French in 1796, 1797, and 1799-1801, and became a Capuchin priest in 1805. He was an ardent patriot and took a leading part in the rising of the Tyrolese against Bavaria, to which power Napoleon had given their country. In 1800 he distinguished himself by his bravery in a number of encounters with the French, and in 1810 he was second only to Hofer and Speckbacher as a leader in the renewed revolt of that year. In 1810 he was exiled by the Bavarians and went to Vienna, whence he was sent on a secret mission two years afterward to arouse the people of Upper Italy to revolt. He was pastor of a church near Vienna, at Hietzing, from 1814 to 1848, then went into Italy as chaplain to a company of Tyrolese volunteers, lived at Döbling until 1854 and then at Salzburg. He was buried beside Andreas Hofer at Innsbruck. As a member of the Capuchin Order, he had unusually great influence with the people, who called him "Pater Jochem" and "Rotbart." Consult Schallhammer, *Biographie des Tiroler Heldenpriesters Joachim Haspinger* (Salzburg, 1856).

HASSALL, ARTHUR (1853-). An English historian, born at Bebington in Cheshire. He studied at Trinity College, Oxford, where he was history exhibitor in 1876, and the next year won a first-class in the Honor School of Modern History, Oxford. From 1880 to 1883 he was a lecturer and tutor at Keele College and from 1890 to 1892 and again in 1901-03 examiner in the Honor School of Modern History. He was elected a member of the Hebdomadal Council from 1892 to 1896, Censor of Christ Church, 1894-95, and was re-elected member of the Hebdomadal Council in 1897. His publications include: *Life of Bolingbroke* (1880); *Louis XIV* (1895), in the "Heroes of the Nations Series"; *The Balance of Power, 1715-89* (1896), in the series "Periods of European History," of which he was made general editor; *History of France* (1901); *The French People* (1901); *Mazarin* (1903); *The Tudor Dynasty* (1904); *The Expansion of Great Britain, 1715-89* (1907); *Castlereagh* (1908); *The Restoration and the Revolution, 1660-1715* (1911); *The Great Napoleon* (1911); *History of British Foreign Policy* (1912).

HASSAM, CHILDE (1859-). An American figure and landscape painter, one of the foremost exponents of impressionism in America. He was born in Boston and studied in the Boston Art School, and later under Boulanger and Lefebvre in Paris, but from the first allied himself with the Impressionistic movement. His range of subjects is wide—street scenes, landscape with and without nudes, and interiors with figures—and his technique is distinctly individual. With a remarkable mastery of color he evolved a system of his own, composed of primary colors juxtaposed in parallel stripes and dashes, the whole giving a remarkably vibrant and brilliant effect. His interiors are unusually charming, and while his nudes are not always convincing, yet they harmonize with the landscape, which is interpreted with much poetic feeling. Hassam received many prizes and gold medals: at Munich (1892), Phila-

delphia Art Club (1892), Pennsylvania Academy of Fine Arts (1899), Buffalo (1901) and St. Louis (1904) expositions, Carnegie Art Institute, Pittsburgh (1905), and the Jennie Sesnan gold medal, Pennsylvania Academy of Fine Arts (1910). He is represented in the Metropolitan Museum of Art, New York; the National Gallery, Washington; the Walters collection, Baltimore; the Chicago Art Institute; Worcester Museum; Corcoran Art Gallery, Washington, D. C.; Carnegie Art Institute, Pittsburgh; Pennsylvania Academy of Fine Arts, Philadelphia, and nearly every other important gallery in the United States. He joined the group known as the "Ten American Artists," and was elected a member of the National Academy (1906), the Société Nationale des Beaux-Arts, the Secession, Munich, the American Water Color Society, and the National Institute of Arts and Letters. Among his most important works are: "The Little June Idyll" (1906); "Evening Bells," "Winter" (1908); "Aphrodite" (1909); "Summer Idyll" (1910); "Manhattan's Sunset Towers" (1911); "The Buttery" (1912); "The New York Window" (1913), one of his most charming interiors; "The Strawberry Tea-Set"; "Broad and Wall Streets"; "Summer Sea"; "Lorelei."

HASSAR. Any of several of the dorads or mailed catfish of the Orinoco River and its tributaries, which have some extraordinary habits. They make nocturnal journeys in the dry season, from a diminishing pond to another one, or from river to river, overland, often in companies, and to such distances that several nights are consumed in travel. They also construct nests of leaves at the margin of ponds and streams at the beginning of the rainy season, where the eggs are deposited and guarded till they hatch. See CATFISH.

HASSARD, JOHN ROSE GREENE (1836-88). An American journalist. He was born in New York City and graduated at St. John's College, Fordham, in 1855. He was one of the editors of the *New American Cyclopaedia*, in 1865 edited the *Catholic World*, and in 1866 joined the editorial staff of the *New York Tribune*. He became widely known as a graphic correspondent and also as a musical critic of rare capacity and judgment. After the death of George Ripley (1880) he was also literary editor of the *Tribune*. In 1878, with Grosvenor, also of the *Tribune*, he deciphered the telegrams which were thought to prove corruption on the part of the Democratic National Committee, or of Tilden's friends, in the disputed election of 1876. Among his publications are: *Life of Archbishop Hughes* (1866); *The Ring of the Nibelung* (1877); *Life of Pius IX* (1878); *A Pickwickian Pilgrimage* (1881).

HASSE, hās'se, FRIEDRICH RUDOLF (1808-62). A German Protestant Church historian. He was born in Dresden, June 29, 1808, educated at Leipzig and Berlin, and at the latter university first took up the study of Anselm of Canterbury. In 1834 he began to lecture in Berlin on Church history and went to Greifswald as extraordinary professor of Church history in 1836; thence in 1841 in the same capacity to Bonn, where he became full professor (1849). He made his reputation by his masterly work on Anselm—vol. i, *Life* (1843); vol. ii, *Theology* (1852). He died at Bonn, Oct. 14, 1862. After his death his lecture outlines upon the *Geschichte des alten Bundes* (1863) and *Kirchen-*

geschichte (1864; ed. by W. Engelmann, 1872) appeared. For his life, consult Krafft (Bonn, 1865).

HASSE, JOHANN ADOLPH (1699-1783). A German dramatic composer, born at Bergedorf, near Hamburg. In 1718 he became a tenor at the Hamburg Opera, and in 1722 became connected with the Brunswick Theatre, where the next year his first opera, *Antigonus*, was produced. In 1724 he went to Italy, studying with Porpora and A. Scarlatti. In 1731 Augustus the Strong appointed him kapellmeister and director of the opera at Dresden, and his wife, the celebrated singer, Faustina Bordoni, was engaged as prima donna. While in that city, he was involved in a bitter rivalry with Porpora and Mingotti, and it was not until after their departure that Hasse became supreme. At the siege of Dresden, in 1760, he suffered great losses, many of his manuscripts being destroyed. His operas, some of the best of which were composed during his stay in Italy, were extremely popular, among the best of them being: *Sesostrate* (1726); *Attalo, re di Bitinia* (1728); *Dafnis* (1730). In his seventy-fifth year he produced at Milan his last opera, *Ruggiero*, in celebration of the marriage of the Archduke Ferdinand. His music was marked by great naturalness of expression and charming melody. In addition to over 100 operas, he wrote 10 oratorios, 5 Te Deums, and numerous instrumental pieces and sacred compositions. Consult C. Mennicke, *Hasse und die Brüder Graun als Symphoniker* (Leipzig, 1906), and L. Kamiński, *Die Oratorien von J. A. Hasse* (ib., 1912).

HASSELQUIST, hās'sel-kvīst, FREDRIK (1722-52). A Swedish traveler and naturalist, born at Tärnevala, East Gothland, and educated at Upsala. In 1749 he visited the Middle East, spending the winter in Smyrna, going the next year to Cairo, where he studied the ebb and flow of the Nile, and later proceeded to the Holy Land. He died near Smyrna, while on his way home. Linnæus published his notes in 1757 under the title *Resa til Heliga Landet förättat från Ar 1749 til 1752* (Eng., Fr., and Ger. trans.).

HASSELT, hās'selt. The capital of the Belgian Province of Limburg, situated on the left bank of the Demer, 50½ miles by rail from Antwerp and 19 miles from the Netherlands frontier (Map: Belgium, D 4). It has manufactures of tobacco, laces, linen, and chicory. The town possesses a theological and a teachers' seminary and an industrial school and is famous throughout Belgium for its great fête held once every seven years on the Feast of the Assumption, August 15, which attracts thousands of pilgrims. The last was held in 1912. Pop., 1900, 15,249; 1910, 16,804. Here the Dutch gained a victory over the Belgians on Aug. 6, 1831.

HASSELT, ANDRÉ HENRI CONSTANT VAN (1806-74). A Belgian historian and poet, born at Maestricht, and educated at Liège and Ghent. He was employed in the Royal Library at Brussels, was appointed inspector of primary education (1843) and of normal schools (1850), and edited the old French *Romans de l'Éléonade* (1865). He compiled: *Het gouden Boekken* (1845); *Cours de littérature française* (1861); *Leçons choisies de littérature française* (1865). His prose works include: *Histoire de Rubens* (1840); *Les Belges aux Croisades* (1840); *His-*

toire des Belges (1848); and among his poems mention should be made of: *Poésies* (1852-57); *Primevères* (1854); *Poèmes, paraboles, odes et études rythmiques* (1862); *Les quatre incarnations du Christ* (2d ed., 1872); *Le livre des balades* (1872). He also wrote juveniles under the pseudonym "Alfred d'Aveline" or "Charles André," and some Flemish poetry under the name "Jan van Limburg."

HASSENFRATZ, hās'en-frāts', JEAN HENRI (1755-1827). A French scientist, born in Paris. He studied under Monge, became a geographical engineer (1780), and after three years' study of mining entered Lavoisier's laboratory. He was an ardent Jacobin, a member of the Assembly which decided the fate of the Girondists, and was instrumental in postponing the decree against them. Throughout the Revolution he was active in providing military material, in reorganizing military schools, and in founding the Ecole Centrale de Travaux Publics, in which he was professor of mineralogy and physical geography, and which later became the Polytechnic School. In 1795 he led the bands of the Faubourg Saint-Marceau in their attack on the Convention and had to leave Paris until the general amnesty of that year. In 1794 he became professor of physics at the School of Mines and taught until 1824, when he retired. Besides contributions to the *Annales de Chimie* and the *Journal des Mines*, he wrote: *Manuel militaire* (1790); *Géographie élémentaire* (5th ed., 1809); *Cours révolutionnaire d'administration militaire* (1794); *Tableau de minéralogie* (1796); *Cours de physique céleste* (1803); *Sidérotechnie* (1804).

HASSENPLUG, hās'en-plūg, HANS DANIEL LUDWIG FRIEDRICH (1794-1862). A Hessian Minister, born at Hanau, and educated in law at Göttingen. He was made Minister of Justice and of the Interior (1832) and was an energetic administrator, but a bitter enemy of the Hessian Constitutional party in the Diet and of a free press both of which had been brought into being by the revolutionary spirit of 1830. He was the ultraconservative Metternich of Hesse-Cassel. For five years his absolutist policy was successful, but in 1837 he found himself losing favor at court and left the country. In 1841 he went to Berlin, where he was a member of the judiciary until 1850, when he returned to Cassel as Prime Minister and again fought and finally lost the battle with the Diet. In 1855 Hassenplug retired to Marburg, where he died seven years afterward.

HASSENSTEIN, hās'en-stīn, BRUNO (1839-1902). A German cartographer, born at Ruhl. He was one of the foremost of a band of scientific map makers to whom Germany owes her lead in cartography and was connected with the famous map-making firm of Festus Perthes in Gotha almost throughout his life. He made a specialty of working up material brought home by travelers. His contributions to African and Tibetan cartography have been notable in this respect. His work includes revisions of Fay's *Groot Outline of Geography* (1869) and Spruner's *Handatlas* (1871-79); a new atlas of Japan (1885); and in *Petermanns Mitteilungen*, maps of most of the important exploring expeditions since 1878, especially of the country covered by Junker, Emin Pasha, Hans Meyer, and Sven Heden.

HASSLER, hās'ler, FERDINAND RUDOLPH (1770-1843). An American engineer, born in Aarau, Switzerland. He was employed for a

time on the trigonometrical survey of Switzerland, emigrated to the United States in 1805, and was acting professor of mathematics at West Point from 1807 to 1810 and at Union College in 1810-11. He assisted in the organization of the United States Coast Survey and was its first superintendent (1815-43). He was afterward at the head of the Bureau of Weights and Measures in the Treasury Department, and the early work of establishing the standards of weights and measures of the United States was in his hands. His publications include a *System of the Universe* (2 vols., 1828) and many valuable reports to Congress on weights and measures, besides several textbooks of science.

HASSLER, HANS LEO. See HASLER.

HASSLER EXPEDITION. The name given to the United States Coast Survey expedition of 1871, in the steamer *Hassler* (see HASLER, F. R.), which was the first important scientific expedition sent by the government for marine exploration. The expedition included Prof. Louis Agassiz and Mrs. Agassiz; Dr. F. Steindachner, ichthyologist; Dr. Thomas Hill, botanist; and Count L. F. de Pourtalès, J. A. Allen, and others. The steamer left Boston Dec. 4, 1871, and reached San Francisco in August, 1872. On the way to St. Thomas surface observations were made. Deep-sea dredging was done at Barbados and along the Brazilian coast. At the Straits of Magellan frequent stops were made, and at particularly interesting places several days were spent, and inland excursions undertaken, especially to examine glaciers. Throughout the route collections were made, and much of this material was deposited in the Museum of Comparative Zoölogy at Cambridge, Mass. Some of the zoölogical results of the expedition have been published by Agassiz, Lyman, and Pourtalès.

HASSUNITES, his'sun-its. A name given to the followers of Anton Hassun (1809-84), an Armenian patriarch. Hassun desired to acknowledge the supremacy of the Pope and attended the Vatican Council of 1870. A considerable number of the Armenians were opposed to Hassun and chose the Bishop Kupelian in his place. After much strife Hassun was banished by the Sultan. Kupelian acknowledged the Pope in 1879, and Hassun, who had been allowed to return to Constantinople, was acknowledged by the government as head of the Armenian Catholics in Turkey. The anti-Hassunites also submitted to the Pope. In 1880 Hassun resigned, went to Rome, was made Cardinal, and died, in Rome in 1884.

HASTINAPURA, hās'ti-nā'pū-rā (Skt., Elephant City). An ancient city of India, on the bank of the Ganges, some 50 miles northeast of the present city of Delhi, and probably one of the earliest Aryan settlements outside of the Punjab. Its importance lies in the fact that it forms a central point of the principal scenes of the *Mahābhārata*. It was the residence and capital of the Kuru family; whereas their rival and noble cousins, the Pandus, built their royal city at Indraprastha, or Indrapat, nearly on the site of the modern Delhi. There are but few traces of the ancient city Hastinapura remaining, though tradition points to a group of shapeless mounds as being the residence of the princes of the house of Bharata whose deeds are commemorated in the great national epic.

HASTING, hās'ting. A viking, or sea rover, of the ninth century, to whom legend ascribes

most of the deeds performed by the Danish pirates of that time. It is said that in 842 he made his first appearance as a leader, plundering Touraine. From 859 to 863 he was plundering the Spanish and Italian coasts and in the latter country captured Luna by stratagem. In 866 Robert, Count of Paris, fell in battle fighting against Hasting, who was then in the Loire valley. He left this portion of France in 872 and in 889 appeared in the valley of the Somme. In 893 he was defeated by Alfred the Great, with whom he made peace. At that time the two sons of Hasting were baptized. How many of these statements are true cannot be established. No such name occurs in the sagas. Consult Depping, *Histoire des expéditions maritimes des Normands* (Paris, 1844), and Keary, *Vikings in Western Christendom* (London, 1891).

HASTINGS, hās'tingz. A parliamentary and county borough in Sussex, England, on the English Channel, 62 miles southeast of London (Map: England, G 6). It was the premier Cinque Port, but lost its importance after being burned by the French in 1377. It is now a celebrated watering place, largely frequented for its historical interest, picturesque situation, fine sandy beaches, and its healthful, bracing climate. The town depends for its prosperity almost entirely on its visitors, though it has a small fishing industry. It lies in a valley surrounded by hills. St. Leonard's-on-Sea, a western suburban town, has been absorbed and joined to the borough. Hastings has two fine piers, large tepid swimming baths, numerous hotels, good schools, and the somewhat scanty remains of an ancient Norman castle. The marine parade, 3 miles in length, is one of the finest sea walks and drives in the kingdom, and there is also a long covered parade called the Marina. The town owns spacious open grounds on the east and west hills, a beautiful park, three public gardens, the Brassey Institute, with public library, museum, and art schools presented by Lord Brassey, a fish market, cemetery, and excellent well-water supply, and electric-lighting supply, and maintains bathhouses and hospitals. The streets are sprinkled with sea water, which is also supplied to private houses for bath purposes through mains. In 924 Athelstan established a mint at Hastings, then an important place, and there William the Conqueror landed and encamped prior to his famous victory over Harold at Senlac Hill (now Battle Hill), which secured to him the conquest of England, on Oct. 14, 1066. On the spot where Harold fell William founded Battle Abbey. (See BATTLE MOUNTMENT.) William I by charter made Hastings one of the Cinque Ports. Hastings had early municipal privileges and received the charter of incorporation from Elizabeth. Pop., 1901, 65,000; 1911, 61,145. Consult: Cooper, *Notices of Hastings* (1862); Burrows, *Cinque Ports* (London, 1888); C. G. Harper, *Hastings Road* (New York, 1906). See HASTINGS, BATTLE OF.

HASTINGS. A city and the county seat of Barry Co., Mich., 32 miles by rail southeast of Grand Rapids, on the Thornapple River, and on the Michigan Central and the Chicago, Kalamazoo, and Saginaw railroads (Map: Michigan, D 6). It has a public-school library and a fine city hall, courthouse, and jail. The city is of importance as a manufacturing centre, its products comprising flour, furniture, felt boots, power presses, cigars, hose reels, pumps, car seals, carriages and wagons, etc. The water works are

owned by the municipality. Pop., 1900, 3172; 1910, 4383.

HASTINGS. A city and the county seat of Dakota Co., Minn., 20 miles by rail southeast of St. Paul, at the junction of the Vermillion River with the Mississippi, and on the Chicago, Burlington, and Quincy, and the Chicago, Milwaukee, and St. Paul railroads (Map: Minnesota, E 6). It is the seat of one of the State asylums for the insane, has a city hospital and courthouse, and is an important distributing centre; its industries include several grain elevators, a malt house and breweries, saw, planing, and flour mills, sash, door, blind, sprayer, time-recorder, and wagon factories, gas engine and boat works, a file factory, etc. A bridge of novel type spans the Mississippi at this point. In order to avoid the business section, which is close to the river, the approach to the bridge proper is built in the form of a spiral. The water works are owned by the city. Pop., 1900, 3811; 1910, 3983.

HASTINGS. A city and the county seat of Adams Co., Neb., 97 miles west of Lincoln, on the Chicago, Burlington, and Quincy, the Missouri Pacific, the Chicago and Northwestern Line, the St. Joseph and Grand Island, and the Union Pacific railroads (Map: Nebraska, F 4). It is the seat of Hastings College (Presbyterian), opened in 1882, and of the State Asylum for the Chronic Insane, and has a fine city hall, the Mary Lanning Hospital, and City, Prospect, and Heartwell parks. The city is surrounded by an agricultural and stock-raising section, has an important trade in grain, and manufactures flour, wagons, etc. Hastings, incorporated in 1874, is now governed under a charter of 1901, which provides for a mayor, elected biennially, and a city council, the members of which are elected one-half by wards and one-half at large. The water works and electric-light plant are owned by the city. Pop., 1900, 7188; 1910, 9338; 1920, 11,047.

HASTINGS, BATTLE OF. The name usually given to the great struggle which took place at Hastings, on Oct. 14, 1066, between the Normans, under William, Duke of Normandy, and the English, under King Harold. Duke William claimed that Harold had agreed to support his claim to the English crown on the death of Edward the Confessor (q.v.), and when this was not done William began preparations to wrest the crown from Harold by force. Harold had just conquered his brother and rival, Tostig, at Stamford Bridge (Sept. 25, 1066), when he heard that the Normans were ravaging the south, and he immediately hastened in that direction. He reached a hill, later called Senlac, on October 13. The Norman army was divided into three parts, of which the left wing consisted of Bretons, Poitevins, etc., the right wing of mercenary troops, and the centre of Norman knights and archers led by Duke William in person and grouped around the banner which the Pope had given. On the English side the best troops were the Hus-carls, or bodyguard of Harold. At nine in the morning the battle began with a shower of arrows from the Norman archers, but no impression was made on the English ranks. The Bretons fled, and a part of the English, contrary to Harold's orders, broke ranks and pursued. William noticed that they became disordered thereby, and he ordered a large part of his army to feign a retreat. The English fell into the trap, broke their ranks,

and began to pursue. The Norman centre thereupon was able to direct all its attack upon the bodyguard on the hill, and though the English still fought bravely, Harold's eye was pierced by an arrow, and the battle was lost. William met little vigorous opposition henceforth in his conquest of England. Consult: Freeman, *Norman Conquest*, vol. iii (2d ed., London, 1876); Green, *The Conquest of England*, vol. ii (ib., 1899); Round, *Feudal England* (ib., 1895); Charles Dawson, *History of Hastings Castle* (2 vols., ib., 1910). On the spot where Harold stood William erected Battle Abbey. See **BATTLE MONUMENT**.

HASTINGS, CHARLES SHELTON (1840-). An American physicist. He was educated at Yale University (Ph.B., 1870; Ph.D., 1873), and was instructor there in physics in 1871-73. He then served as associate professor of physics at Johns Hopkins University and in 1884 became professor of physics at Sheffield Scientific School (Yale). He is the author of a *Text-Book on General Physics* (1899), with F. E. Beach, and of *Light: A Consideration of the More Familiar Phenomena of Optics* (1901).

HASTINGS, FRANCIS RAWDON-HASTINGS, first MARQUIS OF (1754-1826). An English general and statesman. He was born Dec. 9, 1754, was educated at Harrow, and matriculated at University College, Oxford, but entered the army at the age of 19 and was sent in 1773 to America. There he fought in many of the more important engagements of the Revolutionary War and won especial distinction in the battle of Holbirk's Hill (April 25, 1781). He was made adjutant general of the British forces in America in 1778, Baron Rawdon in 1783, and 10 years later inherited another title from his father, the Earl of Moira. His campaigning in Holland (1794-95) was followed by a term of home service, as master general of ordnance, and he also was most active in the politics of the time. He was Governor-General of India from 1813 to the beginning of 1823. There he showed his mettle in the transformation of the warlike Gurkhas from foes into friends, and he was accused even of exceeding his instructions in the subjugation of native races, to whom, however, he played the amiable despot, encouraging education and civil reform. In recognition of his services in the establishment of British power in India he was made Marquis of Hastings (1816), and he was commander in chief at Malta for the last two years of his life. Consult: Prinsep, *History of the Political and Military Transactions in India during the Administration of the Marquess of Hastings* (London, 1825); Ross-of-Bladensburg, *The Marquess of Hastings* (Oxford, 1893); *The Private Journal of the Marquess of Hastings*, edited by his daughter (reprinted from 2d ed., Allahabad, 1907).

HASTINGS, FRANK ARNEY (1794-1828). An English naval commander, son of Lieut.-Gen. Sir Charles Hastings. He entered the British navy in 1805, but for insubordination was forced to leave it in 1820. He joined the Greek navy in the struggle against the Turks, fought at Nauplia (1822), and the following year drew up a paper containing some of the ideas from which grew the nineteenth-century revolution in naval warfare, embracing a substitution of ironclad steam vessels for wooden sailing craft. In 1824 he bought and equipped a vessel in line with his ideas and with it did great damage to the

Turkish fleet, distinguishing himself especially in the Bay of Salona in 1827. In December of the same year Hastings captured Vasiladi. He died of a wound received at Anatolikon in 1828. Consult Gordon, *History of the Greek Revolution* (Edinburgh, 1832), and Finlay, *History of the Greek Revolution* (ib., 1861).

HASTINGS, HENRY, EARL OF HUNTINGDON. See HUNTINGDON.

HASTINGS, JAMES (c.1800–). A Scottish biblical scholar, born in Huntly, Aberdeen. He was educated at Aberdeen University and at the Free Church Divinity College in Aberdeen, and was pastor at Kinnell, Kincardineshire, in 1884–97, of Willison Church, Dundee, in 1897–1901, and of St. Cyrus Church until 1911. From 1890 to 1913 he edited *The Expository Times*. But he is even better known for the dictionaries and encyclopedias that he edited: *Dictionary of the Bible* (5 vols., 1898–1904; 1 vol., 1908); *Dictionary of Christ and the Gospels* (1906–07); *Encyclopedia of Religion and Ethics* (1908 et seq.); *Dictionary of the Apostolic Church* (1914 et seq.). He also edited two expository series: *The Great Texts of the Bible* (1910 et seq.) and *The Greater Men and Women of the Bible* (1913 et seq.).

HASTINGS, SELINA SHIBLEY. See HUNTINGDON, SELINA HASTINGS.

HASTINGS, THOMAS (1800–). An American architect. He was born in New York City and graduated from the Ecole des Beaux-Arts, Paris, in 1884. He immediately afterward entered into partnership with John M. Carrère (q.v.). The firm of Carrère and Hastings designed the Ponce de Leon and Alcazar hotels at St. Augustine, Fla., the Central Congregational Church at Providence, R. I., the Mail and Express and Edison buildings, and the New Theatre (later Century Opera House), all in New York, the New York Public Library, the Senate Offices at Washington, D. C., and many other notable buildings. Hastings was appointed to the Commission of Fine Arts, was elected a member of the National Academy (1909) and of the American Academy of Arts and Letters, and became Chevalier of the Legion of Honor.

HASTINGS, WARREN (1732–1818). An English statesman and the first Governor-General of India. Descended from an ancient family long settled at Daylesford in Worcestershire, he was born at Churchill in Oxfordshire on Dec. 6, 1732. He was early left an orphan, but when only seven years old he resolved to recover the estate which had passed out of the possession of his family. Entering Westminster School at the age of 12, he became an excellent scholar, and at 17 he was sent to Calcutta in the secretarial service of the East India Company. In 1758 he was appointed Resident at the court of Murshidabad in recognition of his services under Colonel Clive in recovering possession of Calcutta. Three years later he was appointed to the Calcutta Council, in which he showed himself a man of marked integrity and strenuously opposed the measures of his mercenary colleagues until 1764, when he resigned and returned to England. In 1769 he again went to India, on his appointment as second in the Council at Madras, and in 1772 he became president of the Supreme Council of Bengal. When a little later Parliament created a governor-generalship of India, it bestowed that office upon Hastings, who entered upon his duties at the beginning of 1774. From the first there was

discord between him and his council, who seemed determined to encompass his downfall. The finances of his government were in a disordered state, and the incessant demands of the East India Company for money led to some alleged unscrupulous expedients for raising funds. Siraj-ud-Daula, Nawab of Oudh, having a claim upon the rich provinces of Katakhr, occupied by the Rohillas, asked of Hastings military aid in subduing these people. Hastings granted the request, as in fact a treaty with the Nawab required, and received for the service a large sum of money, which he used to supply a deficit in the Bengal treasury. The Nawab treated the conquered with great severity in spite of the intercession of Hastings. The condemnation and execution of the ambitious, intriguing Brahman, Nanda Kumar, is perhaps unjustly laid at his door. But to raise more money Hastings deposed Chait Singh, Rajah of Benares, for disloyalty and insurrection, and confiscated his possessions. He made an agreement also with Asaph-ud-Daula, son of Siraj-ud-Daula, under which he deprived the mother and grandmother of the Nawab of extensive domains which had fallen irregularly into their hands. The administration of Warren Hastings, although he was constantly trammelled by orders from home and frequently borne down by an able and factious majority in his own council, was vigorous and successful, and his conduct of military affairs was no less efficient. He broke the power of Hyder Ali, Rajah of Mysore; he organized a system by which justice was dispensed, the revenue collected, and peace maintained. It is greatly to his credit, too, that he encouraged Asiatic learning. When he resigned his office and left India in the spring of 1785, that great empire was tranquil. A treaty had been concluded with Tippu Sahib, son and successor of Hyder, and the Carnatic had been evacuated by the armies of Mysore. On his arrival in England he was received with distinction by George III and the court. The directors acknowledged his services by a unanimous vote of thanks. The Whig opposition, spurred on by Philip Francis, the inveterate foe in the Indian council, was, however, loud and vehement against him and succeeded in carrying in the Lower House a motion for his impeachment at the bar of the House of Lords. The trial began in Westminster Hall, Feb. 12, 1788, the managers of the impeachment being Burke, Fox, Sheridan, Windham, and Charles (afterward Earl) Grey. Burke opened the proceedings in a speech which extended over four sittings; Fox and Grey urged the charge respecting Chait Singh; and Sheridan was intrusted with the conduct of the article relating to the begums or princesses of Oudh. The interest taken by the public in the impeachment began to decline after these great displays of rhetoric. The trial, notwithstanding, lasted for upward of seven years. On April 23, 1795, it terminated in the acquittal of Hastings. Of 400 peers only 29 voted.

Hastings passed the last 24 years of his life at Daylesford in the pursuits of literature and in the occupations of a country gentleman. He died on Aug. 22, 1818, in his eighty-sixth year, and was buried behind the chancel of the parish church of Daylesford. A man of great industry, with an extraordinary capacity for administrative details, he undoubtedly labored for the good of India, often, however, by questionable meth-

ods. To him the English government is largely indebted for its political and judicial organization of India and for its method of Indian administration. Instead of receiving his due meed of praise, he was made the scapegoat for the sins of the East India Company. Consult: *History of the Trial* (London, 1796); *Debates of the House of Lords* (ib., 1797); Gleig, *Memoirs of the Life of Warren Hastings* (3 vols., ib., 1841), containing original documents; Bond, *Speeches of the Managers and Counsel* (ib., 1859-61); Trotter, *Warren Hastings* (ib., 1878); Stephen, *Story of Nuncomar and Impeachment of Sir Elijah Impey* (ib., 1885); *The Minutes of Evidence* (ib., 1886); Strachey, *Hastings and the Rohilla War* (Oxford, 1892); Forrest, *The Administration of Warren Hastings* (Calcutta, 1892); Malleon, *Life of Warren Hastings* (London, 1894); Lawson, *The Private Life of Warren Hastings* (new ed., ib., 1911); Lyal, *Warren Hastings* (ib., 1902); *Letters of Warren Hastings to his Wife*, edited by Grier (Edinburgh, 1905); Hastings, *A Vindication of Warren Hastings* (London, 1909). Macaulay's famous *Essay on Warren Hastings* is a flagrant injustice to Hastings.

HASTINGS, LORD WILLIAM (c.1430-83). An English soldier in the service of King Edward IV. He was the son of Sir Leopold Hastings, and upon his father's death succeeded to landed estate in Warwickshire and Leicestershire. Upon the accession of Edward IV to the throne in 1461 he rewarded Hastings, who, during the Civil War, had been a faithful friend and retainer of his father, the Duke of York, with lucrative offices and grants of land. He was an energetic soldier in all the King's wars, besides being an ambassador and negotiator for him on various occasions. He fought in Edward's Scottish campaigns, and upon Warwick's invasion aided the King in escaping, raised forces in his behalf, and after his return commanded part of the army at the battle of Barnet. Having invaded France in 1475, he obtained a treaty of peace and an annuity from the French King. After the death of Edward IV he was accused of treason by the Duke of Gloucester and beheaded.

HASTINGS SAND. See **WEALDEN FORMATION**.

HASTINGS UPON HUDSON. A village in Westchester Co., N. Y., 3 miles north of Yonkers, on the New York Central and Hudson River Railroad (Map: New York, B 2). It contains the New York Orphan Asylum Society and there are manufactures of copper-wire cable, sheet and tube copper and brass, asphalt paving bricks, dyestuffs and chemicals, etc. Pop., 1900, 2002; 1910, 4552.

HASTY PUDDING. A humorous poem, by Joel Barlow, published in 1796.

HASWELL, HÄZ'WEL, CHARLES HAYNES (1809-1907). An American civil, marine, and mechanical engineer, born in New York City. He learned his profession in a steam-engine factory and in 1836 was appointed the first chief engineer in the United States navy. During his service, which lasted until 1850, he was a member of the boards which designed the *Missouri*, the *Mississippi*, and six other steam frigates. The *Mississippi* was the flagship of Commodore Perry on the expedition to Japan in 1853. He built the first practicable steam launch (1837) and was the first to use zinc to protect iron vessels and marine steam boilers from the gal-

vanic action of salt water and copper. He designed the engines of the *Powhatan*, *Saranac*, and *San Jacinto* and cooperated in designs of the *Michigan* and *Susquehanna*. He was in full control at the time when paddle wheels were being replaced by screws for propulsion, and wood replaced by iron for hulls. He left the navy before the age of steel. He superintended the construction of the crib bulkhead at Hart's Island and after 1898 was the consulting engineer of the board of public improvements in New York City. His publications include: *The Mechanic's and Engineer's Pocket Book* (1842; 74th ed., 1913); *Mechanic's Tables* (1854); *Mensuration and Practical Geometry* (1856); *Reminiscences of an Octogenarian of the City of New York, 1816 to 1866* (1896).

HASWELL, WILLIAM A. (1854-). A British zoölogist, born and educated in Edinburgh. In 1880 he became curator of the Queensland Museum, in 1882 demonstrator in Sydney University, and in 1890 professor of biology there. He published a standard *Text Book of Zoölogy* (1897, with Parker) and a *Manual of Zoölogy* (1899).

HASZARD, FRANCIS LONGWORTH (1849-). A Canadian jurist and administrator. He was born at Bellevue, Prince Edward Island, and was educated at Prince of Wales College, Charlottetown. He was called to the bar in 1882, and in 1895-1900 was judge of the city court, Charlottetown, of which city he afterward became recorder. In 1904-11 he was a Liberal member of the Provincial Legislature; in 1905 was appointed a member of the Provincial Ministry (without portfolio); in 1908 became Premier and Attorney-General; and in 1911 was made a judge of the Prince Edward Island Supreme Court. He became a member of the Royal Conservation Commission in 1909, and in 1910 was a delegate to the Interprovincial Conference at Ottawa.

HAT (AS. *hatt*, Swed. *hatt*, Dan. *hat*). A general word for head covering, especially one easily removable, with crown and brim. While no ancient hats have been preserved, we have illustrations of many, varying from feathered headdresses to the tall cylinders worn by Hittite kings and queens. Most common of all were round hats, often with a narrow brim, sometimes with a low crown, and sometimes with a high crown. By the Greeks and Romans hats were much less worn than by modern Europeans and Americans. The classic *causia* was a felt hat with high crown and broad brim slightly rolled. The *petasus* was a broad-brimmed hat of felt with low crown, tied on either under the chin or behind the ears, and worn principally by travelers. The *pileus* was also of felt, but more like a modern cap, sometimes as simple as a skullcap. The principal head covering of Greek and Roman ladies was a veil, supplemented in cold or wet weather by a hood of linen in summer and of wool in winter, usually square in shape and untailored.

The hats of the early Middle Ages were comparatively simple caps or hoods, but in the fourteenth and fifteenth centuries extravagant and eccentric shapes and proportions were developed. Straw hats that started in the eleventh century with mushroom brims and round tops trimmed with colored materials and finished at the top with a spike or button developed pointed crowns in the fourteenth. The close helmet-shaped cap of the twelfth century, with a falling

point from the crown, was succeeded in the thirteenth by a hat with high crown, peaked front, and turned-up back, and in the fifteenth by a straight-up high hat often brimless. The common cap with folded brim had a loose crown that began to fall over on one side in the eleventh century; reached in loose folds, with serrated or foliated edges, to the shoulder in the fourteenth; and in the fifteenth often dropped as far as the knee in a long thin point. Towards the end of the fifteenth century, low-crowned flat hats with turned-up brim came in vogue. They were generally worn tilted to one side and often over a scarlet skullcap. A large bunch of plumes in front, curving backward, added greatly to the effect. On most of the tall hats, some like those of to-day but more belled at the top and with rolled and padded brim, the feather was generally at the back. In the fifteenth century the eccentric fashions of female millinery surpassed even those of the eighteenth century and of to-day. There seemed to be no limit to the altitude of peaks and cornucopias and baskets set upon the head. Weirdest of all were the creations with high receding crown flanked by huge horns. From the brims or lower edges hung veils of finest muslin, sometimes draped simply, but sometimes arranged on wire frames in portentous shapes. In the first part of the sixteenth century flatness reigned. Women wore caps of velvet or gold brocade, sometimes with padded front, with velvet falls reaching to the shoulder, or picturesquely shaped in set-out effects. The broad brims of men's hats were usually serrated, and the tam-o'-shanter shapes of the upper classes were worn tilted and adorned with feathers. During the reign of Queen Elizabeth men's hats became narrower, with turned-down curved brim and fuller crown encircled with a gold band or set with a feather on the right. Also in vogue were small tight-fitting round hats with rolled brim and feather in front. Women's head coverings had already grown to look more like hats and had a brim curved in over the brow. Falls of velvet, silk, or veiling were crowded out by the Elizabethan lofty neck ruffs and collars. There were also hats with full gathered crowns, tall hats with feather at the side, and many eccentric shapes.

During the reign of James I the brims of men's hats broadened and feathers were placed fantastically at the back and sides of the high crown. Brims were often fastened up on the right side with a jewel. In the reign of Charles I crowns were a little lower, but brims were variously curved and feathers were worn falling over them to the side or back. In the reign of Charles II high-crowned hats with band and bow in front, with flat, waved, or curved brim and with feathers on either side or all round, were the fashion. Sometimes the brim was turned up at the sides and in front, forming the three-cornered hat that flourished for over a century, but was replaced by the top hat at the beginning of the nineteenth century. During that century were developed and standardized the tall hats with straight crowns, made originally from fine fur and later of silk plush, and also the stiff felt hats with round crowns that are chiefly worn to-day, supplemented by straw hats of various shapes and qualities for summer, and by soft felt hats and cloth caps for country or occasional wear and for sports.

Political and religious differences have often

been marked by the form of hats. The Puritan of the reign of Charles I adopted the steeple hat, high and narrow, with a broad brim, and devoid of ornament, while the Cavalier wore a lower and broader crown, with a feather stuck on one side. The Quaker hat, low in the crown, with a broad brim, and plain, dates from the origin of the sect at the middle of the seventeenth century.

Hat Manufacture. The history of hat manufacture in the United States dates back to early Colonial days. In 1662 the Assembly of Virginia enacted a law offering 10 pounds of tobacco for every good wool or fur hat made in the Colony. In 1675 laws were passed prohibiting the exportation of raccoon furs from the provinces. By 1731 the industry had become of so much importance as to interfere with the trade of the English manufacturers, who petitioned Parliament to forbid the importation of hats from the American Colonies. A special committee to which the petition was referred reported that in New York and New England 10,000 beaver hats were manufactured annually, and that there were 10 hatters in the single city of Boston, one of whom made 40 hats a week. In accordance with the spirit of this petition, laws were passed forbidding the exportation of American hats to other English colonies, forbidding the manufacture of hats by any person who had not served an apprenticeship of seven years at the business, and forbidding negroes from working at the business. But in spite of these hampering restrictions the industry continued to thrive and to be encouraged by the various Colonial governments. Delaware, in 1753, offered a prize of 40 shillings for the neatest and best hat manufactured in the lower counties. Carolina, by 1767, had developed a flourishing hat industry, with a large export trade to the Spanish islands. Soon after the close of the Revolution the manufacture of hats had become of great importance in Pennsylvania, and from that time the industry has continued to flourish. The principal centres of hat manufacture in the United States to-day are Philadelphia and Reading in Pennsylvania, Newark and Orange in New Jersey, Brooklyn in New York, Danbury, Bethel, and Norwalk in Connecticut.

Felt hats are made in a wide range of qualities. The finer and more expensive grades are entirely of fur; the commoner grades use a mixture of fur and Saxony wool; and for the lowest kinds wool alone is employed. The processes and apparatus necessary for making hats of fur differ also from those required in the case of woolen bodies, and in large manufacturing machinery is generally employed for operations which formerly were entirely manual. Hatter's fur consists principally of the hair of rabbits (technically called coneys) and hares, with some proportion of nutria, musquash, and beaver's hair, though the latter material has been for many years extremely scarce, and generally any parings or cuttings from furriers are also used. Furs intended for felting are deprived of their long coarse hairs, after which they are treated with a solution of nitrate of mercury, an operation called carrotting or sceretage, whereby the felting properties of the fur are greatly increased. The separation of the fur from the skin is effected by cutting the skin into shreds by means of rapidly revolving shear blades, fixed just below a table,

but so adjusted that, as the skin passes under a roller or guide fixed above the shear blade, it drops beneath the machine, while the fur, without the apparent displacement of a fibre, passes on the other side of the roller, whence it is removed and packed away until required. Different kinds and qualities of fur are next mixed to produce the quality of hat desired—an operation which is accomplished by means of a machine called a "devil," in which the fibres are pulled apart and thoroughly mingled. The fur is next taken to a blowing machine, where it is kept constantly agitated in a light current of air. The matted pieces and those to which skin adheres, together with the hair and dirt thrown out from the fine fur, drop through a set of sieves which separate the valuable pieces of fur for further treatment. The blowing process continues until the fur is perfectly free from extraneous matter, when it leaves the machine in a lap, fine and soft, but so light and flimsy that it hardly bears the touch. As the fur comes from the blower it is weighed out into boxes, each of which contains fur enough for one hat. Each box of fur is now passed on to a former, a machine which consists of a revolving cone made of brass or copper, of suitable size for the hat body. The cone is pierced with innumerable small holes, through which a current of air is drawn by means of an exhaust fan. There is also an arrangement by which minute jets of hot water are thrown upon the newly formed hat body to give it sufficient consistency to permit its removal from the cone. The fur is fed through a tube to a revolving cylinder, which thoroughly opens and distributes the fur into the machine and spreads it evenly over the surface of the cone, which during this operation is inclosed in a tight box. When the fur is properly distributed, the box is opened, the jets of water are thrown upon the fur, and the embryo hat, over which a cloth is spread for its protection, is removed by hand. The whole operation takes but two or three minutes. The fur is then rolled and pressed, first by hand and then by machinery, to felt it and reduce it to its proper proportions. In the meantime it is sized to add to its strength and durability. An application of shellac dissolved in alcohol is used, a much stronger solution being required for a derby than for a soft hat. Thus far the hat has retained its conical form, but the next step is to give it the hat shape. It is placed upon a mold, consisting of a block and a matrix, which shapes both the crown and brim. The next step is dyeing, after which the hair receives further shaping upon another block. This final block is adjustable, so that all the dimensions of a hat—size of band, height and diameter of crown, and width of brim—are accurately gauged by levers, so that, of a given shape, every size can be made on the same block. Pouncing, which is a process of sandpapering to remove inequalities, follows, and is accomplished by placing the hat on a rapidly revolving block and rubbing the surface with fine emery paper. The trimmings—i.e., the sweat-band, the lining, and the ribbon binding—are now attached and the hat given another shaping upon the block.

Wool hats are made by a different initial process. The wool, as it comes from the card in a continuous lap, is wound upon a machine consisting of two cones placed base to base and revolving upon an axis placed parallel to the

end of the card. The double cone is so rotated that the continuous lap of wool is wound in a zigzag manner, crossing and recrossing from end to end. When a sufficient quantity of wool has been received, the machine is stopped, the double cone of wool is divided in the centre, the two resulting hat bodies removed for felting, and the process repeated. The processes of felting, dyeing, stiffening, blocking, finishing, and trimming follow.

Silk hats have a light stiff body, covered with silk plush of a brilliant glossy texture, the manufacture of which is the most important element in the industry. Originally the bodies were made of felt and various other materials, but now calico, muslin, or other cotton material is almost exclusively used. The muslin is first stiffened with a varnish of shellac and then cut into pieces sufficient for crown, side, and brim. The sidepiece is wound round a wooden hat block, its edges are joined by hot ironing, and the crownpiece is put on and similarly attached to the side. The brim, consisting of three thicknesses of muslin cemented together, is now slipped over and brought to its position and then a second sidepiece and another crown are cemented on. The whole of the body, thus prepared, now receives a coat of size; subsequently it is varnished, and it is ready for the operation of covering. In covering this body the under brim, generally of merino, is first attached, then the upper brim, and lastly the crown and side sewed together are drawn over. All these by hot ironing and stretching are drawn smooth and tight, and as the varnish of the body softens with the heat, body and cover adhere to each other at all points without wrinkle or pucker. Dressing and polishing, by means of damping, brushing, and ironing, come next, after which the hat is velvured in a revolving machine by the application of haircloth and velvet velures, which cleans the nap and gives a smooth and glossy surface. The brim has then only to be bound, the linings inserted, and the brim finally curled, when the hat is ready for use.

The value of fur and felt hats manufactured in the United States was, in 1909, \$47,869,000, and in 1913 approximated \$50,000,000. The value of the straw hats manufactured in the United States was, in 1909, \$21,624,000.

For the straw hats made in the United States the braid is chiefly imported from Italy, China, and Japan. It is sewed by machinery and shaped on a block, the pressing being done by machinery. A sizing of glue is used to stiffen the hat before it is pressed. See STRAW MANUFACTURES. For the history of hats consult Rhead, *Hats on Costume* (London, 1906), and Hughes, *Dress Design* (ib., 1913). See HEADDRESS.

HATASU, hū'tā-sū, or **HATSEHPSET**, hā-chēp'sēt (HATSNESES). An Egyptian queen of the eighteenth dynasty, also called Ramaka (or Ma-ka-ra) and Slnemt Anum, who flourished about 1500 B.C. The daughter of Thotmes I, she was associated with him in the last years of his reign; became the concubine of his son Thotmes II, who succeeded his father; and as guardian of his son, later Thotmes III, to whom she married her daughter, exercised a great influence over his brilliant reign and was for some time practically sovereign, as is typified by her appearance on the monuments in male garb. The mutilation of her name in inscriptions points to a falling out between her and the young King, and probably to his complete assumption

of power. From southern Arabia an expedition sent out by Hatusu brought back rich treasure. The temple near Thebes, called Der el-Bahri, which is approached by a lane of sphinxes and is surrounded by obelisks, contains many of the records of her reign and an especially vivid representation of the expedition to Punt.

HATCH, EDWARD (1832-89). An American soldier in the Civil War, born in Bangor, Me. He was educated at the Norwich Military Academy (Vt.) and volunteered for service as a private in the Union army at the outbreak of the Civil War. He assisted in raising the Second Iowa Cavalry, of which he became colonel in June, 1862. He served under General Grant in the South, and after commanding the entire cavalry division in the Army of the Tennessee he was made brigadier general (1864). His gallantry in the field caused his further promotion to the rank of brevet major general (1864) and his transference from the volunteer to the regular army corps as colonel of the Ninth United States Cavalry (1866). He succeeded Gen. Gordon Granger as commander of the Department of Arizona (which included New Mexico) in 1876, negotiated a treaty with the Ute Indians in 1880, and became widely known as an Indian fighter.

HATCH, EDWIN (1835-89). An English theologian, born at Derby. He was educated at Pembroke College, Oxford; was ordained deacon in 1858 and priest in 1859; from 1859 to 1862 was professor of classics in Trinity College, Toronto, Canada; from 1862 to 1867 rector of the Quebec High School; and from 1867 to 1885 vice principal of St. Mary Hall, Oxford. In 1883 he became rector of Purlleigh, Essex, and in 1884 university reader in ecclesiastical history and secretary to the boards of faculties. He was Bampton lecturer in 1880, Grinfield lecturer on the Septuagint from 1882 to 1884, and Hibbert lecturer in 1888. The degree of D.D. was conferred upon him by the University of Edinburgh in 1883. He was a founder (1870) and the first editor of the *Official Gazette*. In theology he was an independent thinker, who sought to effect at Oxford a scientific basis for that study. He published *The Student's Handbook to the University and Colleges of Oxford* in 1873 (7th ed., 1883), but *The Organization of the Early Christian Churches* (Bampton Lectures, 1881) was his first important volume. This was rendered into German, by the eminent Dr. Harnack, as *Die Gesellschaftsverfassung der christlichen Kirchen in Alterthum* (Giessen, 1883). Other works by him were: *The Growth of Church Institutions* (1887); *Greek Influence on Christianity* (Hibbert Lectures, ed. by Dr. Fairbairn, 1890); *Essays in Biblical Greek* (1889); *A Concordance to the Septuagint* (1892-97, with Redpath); *The God of Hope* (1890), a volume of sermons, with a memoir. His writings were important for researches in early Church history. Consult an article by Harnack in the *Theologische Literatur Zeitung* (Leipzig, 1890).

HATCH, JOHN PORTER (1822-1901). An American soldier, born in Oswego, N. Y. He graduated at the United States Military Academy in 1845 and had his first active service as a second lieutenant in the Mexican War. He was brevetted first lieutenant for gallant service in the battles of Contreras and Churubusco, and captain for bravery at Chapultepec. He was made a brigadier general of volunteers in September, 1861, led a brigade in the first battle of

Bull Run, and then took command of the cavalry under General Banks. He was wounded in the second battle of Bull Run, but recovered and commanded a division in the battle of South Mountain, where he was shot in the leg and had two horses killed under him. In 1864 he was assigned to the Department of the South, where he had charge of the coast division, operated with General Sherman, and took part in the attack on Charleston, of which city he had command after its capture. He was brevetted major general of volunteers in 1865, became colonel of the Second Cavalry in 1881, and retired in 1886, having fairly won the reputation of an unusually able and efficient cavalry officer.

HATCH, RUFUS (1832-93). An American banker, born in Wells, York Co., Me. Removing to Illinois, he was first a clerk in a grocery store at Rockford, after which he joined a surveying party on one of the earliest railroads in Wisconsin, and finally, in 1854, entered the grain commission business in Chicago, where he rapidly accumulated a fortune. In 1862 he removed to New York City, where he established a stock-brokerage business and became well known as a dealer in and promoter of railway stocks. He managed the famous Chicago and Northwestern deal in 1868, secured control of the Pacific Mail Steamship Company, and finally, after varying fortunes, failed in the Northern Pacific collapse in 1883.

HATCH, WILLIAM HENRY (1833-96). An American lawyer, born at Georgetown, Ky. He was admitted to the bar in 1854; served in the Confederate army during the Civil War and rose to the rank of lieutenant colonel; was member from Missouri in the United States House of Representatives from 1870 to 1895, and during this time took a leading part in securing legislation for the benefit of the agricultural interests. He was largely responsible for the passage of the act, commonly known as the Hatch Act, granting Federal aid to agricultural experiment stations in all the States and Territories.

HATCH'ELL. See **HACKLE.**

HATCH'LE. A tributary of the Mississippi River. See **Big HATCHIE.**

HATCHMENT, or **ACHIEVEMENT** (formerly *atchment*, *achement*, *atchement*, an abbreviation of *achievement*, Fr. *achèvement*, from *achever*, OF. *achever*, *achiever*, to achieve, from *venir a chief*, Fr. *venir a chef*, to come to the head, or end). In heraldry, an escutcheon or armorial bearing; specifically, the armorial bearing placed, in sable surrounding, on the residence (sometimes the church) of a person lately deceased. The funeral hatchment is in the form of a lozenge, upon which the shield is placed. The crest and other accessories are given, but in place of the motto a text or other religious legend is used. For a bachelor the whole of the lozenge background is black. In the hatchment of an unmarried lady the legend is omitted and a knot of ribbon takes the place of the crest. The hatchment of a husband whose wife survives impales his arms with his wife's in a shield with the external ornaments to which he is entitled, the ground of the hatchment being, under his side of the shield, black, and under his wife's, white. If the wife be an heiress, her arms are not impaled, but carried in an escutcheon (q.v.) of pretense. The arms of a wife whose husband survives are impaled with her husband's arms in a shield or, in the case of an heiress, borne on an escutcheon of pretense. There is no

helmet, crest, or mantling, but a peeress is entitled to her robe of estate. The ground under the dexter side of the shield is white, and under the sinister, black. The hatchment of a widower differs from that of a husband in that the ground is entirely black. The hatchment of a widow differs from that of a wife, both in having the ground entirely black and in the form of the escutcheon, which (except in the case of an escutcheon of pretense) is lozenge-shaped. The arms are encircled by a silver cordon or cordelière, the symbol of widowhood. On the decease of the last of a family, a death's head surmounts the shield in place of a crest.

The achievement of a reigning king or queen, whether married or not, represents the royal arms complete on a ground entirely black. That of an archbishop or bishop has the insignia of his see impaled with his paternal arms, the whole surmounted by a mitre, and the ground is per pale argent and sable. The dean of a cathedral or collegiate church and a king-at-arms also impale the arms of office with their family arms. In the achievement of the wife of a prelate there are two shields; the first contains the impaled arms of the see and the bishop, surmounted by a mitre, and the second the family arms of the bishop with those of his wife. In these the ground is all white, save that part which is under the arms of the wife.

Funeral escutcheons in Scotland, France, and Germany differ considerably from those in use in England in that they indicate not merely the right of the deceased to a coat of arms, but his gentility of descent. The hatchment is much larger, sometimes consisting of a lozenge above 6 feet square, and the arms of the deceased, which occupy the centre, are surrounded by those of the 8 or 16 families from whom he derived his descent, the paternal quarterings on the right side and the maternal on the left. The deceased is not entitled to a hatchment unless all these families had a right to bear arms. On the four corners are death's heads and the initials and titles of the deceased; the black interstices are powdered with tears. See HERALDRY.

HAT CREEK INDIANS. See SUASTAN STOCK.

HATFIELD, or more properly **BISHOP'S HATFIELD.** A market town in Hertfordshire, England, on the Lea, 7 miles southwest of Hertford. Pop. of parish, 1901, 7551; 1911, 8592. It is noted for Hatfield House, the seat of the Marquis of Salisbury, built on the site and containing remains of the famous palace of the bishops of Ely erected in the twelfth century. It was acquired by Henry VIII. Queen Elizabeth was called to the throne while a resident of the palace; James I also resided here, and it was one of the prisons of Charles I. The present stately Elizabethan mansion, built 1608-11 and situated in extensive and beautiful grounds, contains valuable portraits and historical manuscripts. Consult Brewer, *English Studies*, edited by Wace (London, 1881).

HATFIELD, EDWIN FRANCIS (1807-83). An American Presbyterian clergyman, born in what is now Summit, N. J. He graduated at Middlebury College in 1829, studied theology at Andover, and was ordained in New York in 1832. He then became pastor successively of the Second Presbyterian Church in St. Louis and of the Seventh and North Presbyterian churches in New York. Ill health obliged him to give up preaching in 1863. He was for a time agent

for Union Theological Seminary, for which he raised a large sum of money, and for many years clerk of the Presbyterian General Assembly. He was the author of: *Universalism As It Is* (1841); *Saint Helena and the Cape of Good Hope* (1852); *The History of Elizabeth, N. J.* (1868); *The Church Hymn-Book, with Tunes* (1872); *The Poets of the Church* (1884). He left his library of 6000 volumes to Union Theological Seminary.

HATHAWAY, ANNE, or AGNES. The maiden name of Shakespeare's wife. See SHAKESPEARE.

HATHERLEY, WILLIAM PAGE WOOD, first BARON (1801-81). An English jurist, born in London and educated at Winchester and at Trinity College, Cambridge. He entered Lincoln's Inn in 1824, was called to the bar in 1827, and was queen's counsel 18 years later. He entered Parliament for Oxford in 1847, became a power in Church matters, and, though not a polished speaker, was highly respected for his knowledge and conscientiousness. From being a judge and a baronet he rose to be a peer of the realm and Lord Chancellor of Great Britain (1868), but retired in 1872. His personal benevolence influenced his parliamentary career, and his piety is apparent in his published works, such as *Truth and its Counterparts* (1857) and *The Continuity of Scripture* (1867).

HATHOR, hū'thōr. An Egyptian goddess. See ATHOR.

HATIFI, hū'tō-fē, ABDALLAH (c.1460-1521). A Persian epic poet, nephew of Jami (q.v.), born at Khargird in Herat. The last of the important epic poets, he wrote in rhymed couplets five poems: *Lailā u Majnūn*, a story of unhappy love (ed. by Jones, 1788; and in lithograph, Lucknow, 1862); *Haft Manzar*, or the "Seven Races," an imitation of Nizami's *Haft Paikar*; *Shirin u Khusrau*, a tale of the love of a Hindu prince for a rajah's daughter and remarkable as being based on contemporary fact and not on conventional legend; *Timur Nāmah*, or *Zafarnāmah*, celebrating the deeds of Timur, or Tamerlane, the most important historical epic after the *Shāhnāmah* of Firdausi, of which a part was published by Jones (1788; lithographed at Lucknow, 1869); and an uncompleted story of the glories of Shah Ismail. This pentad is one of the many imitations of Nizami's *Khamsah*. Hatifi is also the name of an earlier Persian poet, who wrote *Tul u Changām*, a poem on the relation of man to God under the figure of the ball and the racket—though afflicted and beaten, he must turn again to him who smote; and again of a Turkish poet of Amasia in Asia Minor, who wrote in the sixteenth century.

HATS. See HAT.

HATS. A political party in Sweden. See OAPS and HATS.

HATSHEPSET, or HATSHEPSU. See HATASU.

HATTALA, hū'tā-lā, MARTIN (1821-1903). A Czech philologist, born in the County of Arva, Hungary. He studied at Pressburg and Vienna, was teacher in the Pressburg Gymnasium (1850-54), instructor (1854), and later professor of Slavic philology in the University of Prague. His writings comprise studies in Czech and Slovak phonetics, syntax, and stylistic, a defense of the authenticity of the manuscripts of Kralove-Dvůr (Königinhof) and Grünberg; violent attacks on Schleicher and others; and, with A. Patra, *Reliquiae Metricarum Alexandridon Pa-*

laobohemicarum (1881). To-day his works have no scientific significance.

HATTERAS, CAPE. See CAPE HATTERAS.

HATTERIA, or SPHENODON. A genus of New Zealand "lizards," described in more detail under TUATARA (q.v.), which is the sole remaining representative of a very ancient group of reptiles.

HATTIESBURG, hăt'iz-bûrg. A city and county seat of Forrest Co., Miss., 116 miles by rail northeast of New Orleans, on the New Orleans and Northeastern, the New Orleans, Mobile, and Chicago, the Mississippi Central, and the Gulf and Ship Island railroads, and on the Leaf River (Map: Mississippi, G 8). Hattiesburg is the seat of the Mississippi Normal College and the Baptist Woman's College. It is one of the largest yellow-pine centres in the South and has railroad shops, a cotton compress, a wood-reduction plant, machine shops, and manufactures of lumber, fertilizers, mattresses, etc. The city adopted the commission form of government in 1910. The water works are the property of the municipality. Pop., 1900, 4175; 1910, 11,733; 1914 (U. S. est.), 14,952; 1920, 13,270.

HATTI SHERIF, hăt'tô shâ-rôf', or **HATTI HUMAYUN**, hăt'mâ-yoon' (Turk., excellent writing, from Ar. *khaff*, script, line, from *khaffa*, to trace, and *sharif*, sublime). The name given by the Turks to important rescripts of the Sultan. The hattî sherifs are composed in the Turkish language. Above the text, as a token of the authenticity of the rescript, stands the intricate flourish or mark of the Sultan. This flourish is called *tugra*, or *rishani sherif*. The hattî sherif is irrevocable, while the written decrees of the Sultan relative to matters not so important, called *frads*, are decisions or opinions of the ruler liable to be amended or abrogated.

HATTO, hăt'tô. The name of two archbishops of Mainz. HATTO I (c.850-913) became abbot of Reichenau in 888 and Archbishop of Mainz three years later. He possessed great influence at the court of the Emperor Arnulf, and after the death of the latter in 899 became the guardian of his infant son, Louis the Child. In the struggle between the German kings and the anarchic feudal nobility Hatto was a zealous partisan of the monarchy, and brought to its aid a bold spirit, a crafty mind, and a conscience which balked neither at treachery nor murder. His haughty bearing and magnificent mode of life still further incensed the nobles, who hated him as the instrument of the royal power. The feeling with which he was regarded by the people as a whole is attested by the widespread legend that his body, after death, was carried off by the devil and flung into the crater of Mount Etna. Of greater authenticity is the story related of his perfidious conduct towards Count Adalbert of Babenberg, a noble of Thuringia, who had been at enmity with the Emperor, and who was induced by Hatto to seek the King's presence for the purpose of effecting a reconciliation, the Archbishop promising under oath to restore him unharmed to his castle. After the two had started on their journey from Adalbert's home, Hatto found some pretext for returning with his unsuspecting companion to the castle, thus fulfilling the letter of his vow. Setting out once more, they arrived at the royal camp, where Adalbert was put to death. Hatto is also the hero of the well-known legend connected with the Mouse Tower, situated on an island in the Rhine, near Bingen. During a famine, as the story

goes, the Archbishop caused a number of poor people to be burned in a barn, comparing their cries of agony to the squealing of mice. He was thenceforward pursued by a plague of these animals, to escape which he built the tower on a rock in the Rhine. He could not, however, evade his persecutors and was finally devoured by them. This story, however, is told with slight variations of several historic characters, and is more frequently associated with his namesake, HATTO II, who was Archbishop of Mainz from 968 to 970. Consult Heidemann, *Hatto I., Erzbischof von Mainz* (Berlin, 1865), and Baring-Gould, *Curious Myths of the Middle Ages* (London, 1866-67).

HATTON, SIR CHRISTOPHER (1540-91). An English statesman and jurist, born at Holdenby. He studied at St. Mary Hall, Oxford, became a member of the Inner Temple (1559), sat in Parliament from 1571 to 1587, and showed himself a bitter enemy of the Jesuits. Parry, who defended them in Commons, Hatton accused, and finally had him condemned to death. He was a commissioner at the trial of Babington, of the conspirators against Elizabeth, and of Mary Stuart, and in general showed himself a clever counsellor of the Queen. In 1587 she made him Lord Chancellor—the "dancing Chancellor," as he was called, in allusion to the story that the Queen first looked on him with favor when she saw him dancing. In literary history Hatton is best known as the patron of Spenser, who dedicated to him *The Faerie Queene*. Consult Nicolas, *Memoirs of the Life and Times of Sir Christopher Hatton* (London, 1847).

HATTON, FRANK (1846-94). An American journalist, born in Cambridge, Ohio. He learned the newspaper business in the office of his father, who edited the Cudiz (Ohio) *Republican*. He served through the Civil War, attaining the rank of first lieutenant, and then became a journalist in Iowa, finally becoming editor in chief of the Burlington *Hawkeye*. In 1881 he was appointed Assistant Postmaster-General and three years later succeeded Walter Q. Gresham as Postmaster-General, thereby becoming the youngest cabinet officer since Alexander Hamilton. In 1884-88 he was editor in chief of the *Mail* in Chicago and in 1888 returned to Washington, where he edited the *Post* until his death.

HATTON, JOSEPH (1841-1907). An English journalist, novelist, and playwright, born at Andover. He was educated at home and in Chichester and began his literary career by writing for the *Derbyshire Times*, a paper his father had founded. In 1868 he went to London to edit and transform the *Gentleman's Magazine* and was soon correspondent for German, Australian, and American papers, while he made frequent visits to the United States in the interests of English journals. His popular *Cigarette Papers* appeared first in the *People*, of which he became editor in 1900. His Eastern travels bore fruit in *The New Ceylon* (1881), and he brought out *Henry Irving's Impressions of America* (1884); but he is best known as the author of such novels as: *Under the Great Seal* (1893); *The Banishment of Jossop Blythe* (1895); *The Dagger and the Cross* (1897); *When Rogues Fall Out* (1899); *In Male Attire* (1900). His romance, *John Nodham's Double*, was dramatized for E. S. Willard, and Richard Mansfield produced his version of *The Scarlet Letter*. Hatton also arranged *The Prince and Pauper* for his daughter Bessie, and *Jack Shoppard* for Woodson Grossmith.

HÄTZER, hets'ér, LUDWIG (c.1500-29). A prominent Swiss Anabaptist. He was born at Bischofszell, near St. Gall, Switzerland, studied at Freiburg im Breisgau, and attained high rank as a scholar, particularly in Latin, Greek, and Hebrew. He was intimate with Zwingli, but, being a radical, he desired to move faster than Zwingli thought prudent. In the fall of 1524 he returned to Zurich and openly allied himself with the Anabaptist party. He published a German translation of Ecolampadius' book upon the sacraments; but his continued rejection of infant baptism alienated Zwingli from him, and in March, 1526, he was banished. He went to Basel, where he translated Malachi, with Ecolampadius' commentary (1526), and finally to Strassburg, where he finished, with Johann Denk, a translation of the Prophets (1527), which he published at Worms. He returned to Augsburg, only to be banished again (spring, 1528). He wandered to Constance, and, on the trumped-up charge of having seduced the servant of his wife, he was beheaded after three months' imprisonment, Feb. 4, 1529. So bitter was the feeling that his very name was sometimes spelled in an opprobrious manner, Hetzer, meaning 'irritator.'

HATZFELD, huts'fêlt, or (Hungarian) **ZSOMBOLYA**, zhóm'bó-lyó. A small town, in the County of Torontál, Hungary, 152 miles southeast of Budapest, in a very fertile district (Map: Austria-Hungary, G 4). Of chief interest is the château of Count Csekonicz. Wheat, corn, and rape are raised, and horses are exported. Hatzfeld is the principal settlement of the Swabians of south Hungary, who recaptured the town from the Turks in 1718 and redeemed the district from swamps. Pop., 1900, 10,138; 1910, 10,822, mostly Catholic Germans.

HAUBERK, hq'bêrk (from OE. *hauberc*, *halberc*, Fr. *haubert*, from MFG., OIIG. *halsberc*, *halsberge*, AS. *halsbeor*, *hauberk*, from OIIG., MFG., Goth. *hals*, Ger. *hals*, AS. *heals*, neck; ultimately connected with Lat. *collum*, neck + OIIG. *bergan*, MFG., Ger. *bergen*, Goth. *baigan*, AS. *beorgan*, to protect). In mediæval armor a defense for the body consisting of a shirt made of steel. Originally the hauberk was only a protection for the neck and was made of thick leather. Later it was made of chain mail and at the end of the eleventh century was joined to the mail shirt, or byrnie (q.v.), the name being applied to the whole garment. In the twelfth century the sleeves of the hauberk sometimes terminated at the elbow, but in the thirteenth and fourteenth centuries these came down to the wrist and very generally descended over the hand in the form of a glove or mitten. In the fourteenth century the hauberk was sometimes worn under plate armor; in the fifteenth century it was gradually discarded entirely. Consult Ashdown, *Arms and Armour* (New York, 1900). See ARMOR.

HAUBOLD, hou'bôlt, CHRISTIAN GOTTLIEB (1766-1824). A German jurist of the historical school, born at Dresden and educated at Leipzig, where he became professor of Roman law in 1789. He wrote: *Institutiones Juris Romani Literariæ* (1809); *Institutionum Juris Romani Privati Lineamenta* (last ed., by Otto, 1826); *Manuale Basilicorum* (1819); *Doctrinæ Pandectarum Lineamenta* (1820); and the excellent *Lehrbuch des sächsischen Privatrechts* (3d ed., by Fflügel, 1847-48).

HAUCHE, houq, JOHANNES CARSTEN (1790-

1872). A prolific Danish poet and dramatist. Born at Fredrikshald in Norway, of Danish parents, he came to Denmark (1803) when his mother died, and fought against the English in 1807. Having taken his doctorate at the University of Copenhagen in 1821, he traveled extensively from 1821 to 1827. Through association with Oehlenschläger, he became an apostle of literary reform. His early dramas are of little importance. Then in 1834 he turned to prose fiction, in which field he wrote: *Vilhelm Zubern* (1834), the most admired; *Guldmagern* (1836); *En polsk Familie* (1839); *Skattel ved Rhinen* (1845). In 1842 he published a collection of lyrics, some of which are among the best in Danish literature. In 1846 he was made professor of Scandinavian languages at Kiel, but returned to Copenhagen in 1848 and now wrote many good tragedies, such as: *Nostrene paa Kinneskullen* (1849); *Marsk Stig* (1850), the best; *Tycho Brahe's Ungdom* (1852); *Julian den Præfaldne* (1866). He wrote also an historic epic, *Valdemar Atterdag* (1862), and a second collection of poems (1861). He succeeded Oehlenschläger as professor of aesthetics at Copenhagen in 1851. Of strong imagination and with a bent for the mystic and supernatural, his work at its best is admirable, but its average is not high. Hauch's *Dramatic Works* appeared in three volumes (Copenhagen, 1852-59); his novels in seven (ib., 1873-75; new ed., 1903-05); and his poems have also been collected (ib., 1890-91). Consult Brandes, *Danske Digtere* (Copenhagen, 1877).

HAUCK, hauq, ALBERT (1845-). A German Lutheran theologian, born at Wassertrüdingen in Middle Franconia. He studied at the universities of Erlangen and Berlin and in 1882 became a professor at Erlangen, where he remained until 1889, when he went to the University of Leipzig. In 1891 he was elected a member of the Royal Academy of Sciences. His writings include: *Tertullians Leben und Schriften* (1877); *Die Bischofswahlen unter den Merowingern* (1883); *Kirchengeschichte Deutschlands*, in six parts (parts i-iii, 1887-96; parts i-iv, 2d ed., 1898-1902). As a reward for those labors, he was given the great Verdun prize by the Prussian Academy of Sciences (1899). In 1881 he became an editor of the revised edition of the *Realencyklopädie für protestantische Theologie und Kirche* (3d ed., 1896), and after Herzog's death, in 1882, the sole editor. In 1902 he was given the degree of LL.D. by the University of Freiburg, where he was dean in 1904-05 and 1910-11.

HAUENSCHILD, hou'en-shîlt, RICHARD GEORG SPILLER, born (1825-55). A German poet and novelist, born in Breslau, better known under his pseudonym, "Max Waldau." He began the study of law in the university of his native city, but soon forsook it for modern languages, history, and philosophy. His poems include: *Blätter im Winde* (1848); the epics *Cordula*, *Graubündner Sage* (2d ed., 1855) and *Itahah* (1855); and the elegy, *O diese Zeit!* (1850). Of his novels *Nach der Natur* (2d ed., 1851) and *Aus der Junkerzeit* (1850) are most noteworthy.

HAUER, hou'ér, FRANZ VON (1822-99). An Austrian geologist, born at Vienna and educated there and at Schemnitz. In 1846 he became an assistant of Haidinger at the Mineralogical Museum in Vienna, and from 1849 to 1867, as a member of the Imperial Geological Institute, and after 1866 as its director, took part

in many geological surveys. In 1886 he was appointed superintendent of the Vienna Museum of Natural History and edited its *Annalen* (1886-96) and for the last seven years of his life was a member of the Austrian House of Lords. His published works include: *Geologische Uebersicht der Bergbaue der österreichischen Monarchie* (1855), with Foetterle; *Die Geologie und ihre Anwendung auf die Kenntnis der Bodenbeschaffenheit der österreichisch-ungarischen Monarchie* (2d ed., 1878); and a *Geologische Karte von Österreich Ungarn* (5th ed., 1896). Consult Böhmersheim, *Zur Erinnerung an Franz von Hauff* (Vienna, 1899).

HAUFF, HOUF, WILHELM (1802-27). A German novelist, born at Stuttgart. His education was desultory and revealed no precocity; his effective training came from his mother and sisters and tended to cultivate the imagination rather than the intellect. He studied theology at Tübingen (1820-24) and in 1826 published his first volume, *Märchenromanach*, followed by two sequels of like title, all marked by a singularly dramatic humor. Equally successful were the *Mittheilungen aus dem Memoiren des Satans* (1826) and *Der Mann im Monde* (1826), the last under the name of H. Clauren, a lesser novelist, whose sentimentality it was intended to parody. This it did so successfully as to deceive Clauren's most enthusiastic admirers. His *Lichtenstein* (1826) is one of the best historical novels in German literature. It is a series of vivid historical pictures of men and manners and has held its popularity for three generations. Hauff traveled in Germany, France, and Belgium, and became editor of the *Stuttgart Morgenblatt*. The summer of 1827 he passed in the Tirol, still at work; but in September his health began to fail, and in October he died. To 1827 belong the *Phantasien im Bremer Ratskeller*, *Das Bild des Kaisers*, and *Die Bettlerin vom Pont des Arts*. Among the other collected tales the best are *Das Wirthshaus im Spessart*, *Othello*, *Jul Nüss*, and *Die Sängerin*. Hauff's works are still often reprinted and enjoy undiminished popularity. For biography, consult H. Hofman (Frankfort, 1902).

HAUFFE, FREDERIKE. See PREVORST, SEERESS OF.

HAUG, HOUF, JOHANN CHRISTOPH FRIEDRICH (1761-1820). A German poet, known also by his pen name "Hophthalmos," born at Niederstolzingen (Württemberg). He studied in Stuttgart at the Karlschule, or military institute of Duke Karl Eugen, where he was one of the Schiller group; in 1783 was appointed a secretary to the Ducal Board of Privy Counsellors, in 1794 private secretary, and in 1816 librarian, of the Royal Public Library at Stuttgart, with the title of Aulic Counsellor. Ready in improvisation, he wrote quantities of neat but rather commonplace verse for literary almanacs, anthologies, and journals, and for Cotta's *Morgenblatt*, of which he was an editor from 1807 to 1817. As an epigrammatist, however, he was perhaps second only to Logau (q.v.). The most representative exercise of his wit is to be found in his *Zweihundert Hyperbeln auf Herrn Wahls ungeheure Nase* (1804; 3d ed., 1850), a *tema con variazioni*, which certainly to unprejudiced minds attests his mobility and resourcefulness. A selection from his *Gedichte* appeared at Stuttgart in 1840; another forms No. 1136 of Reclam's *Universalbibliothek*. Consult Fischer, *Beiträge zur Literaturgeschichte Schwabens* (Tübingen, 1901).

HAUG, MARTIN (1827-76). A German Orientalist, born at Ostdorf in Württemberg. Overcoming every obstacle to his early education, he became a school-teacher, first at Ostdorf and later at Untersingen. Here he was forced to continue his classical and Hebrew studies in secret; but he persevered, and developed a taste in linguistics and Sanskrit. Haug entered the Gymnasium at Stuttgart in 1848 and in 1852 received the degree of Ph.D. at Tübingen. Until 1859 his work was mainly at Bonn and Heidelberg, but in that year he was appointed superintendent of Sanskrit studies at the Government College at Poona, India. Leaving Europe with his bride, he went to India, where he worked unceasingly in Sanskrit, Avestan, and Pahlavi, in addition to the task of reforming the system of native education. In 1866 Haug returned to Germany, and two years later was appointed to the newly created chair of Sanskrit and comparative linguistics at Munich, which he held until his death. Haug's work was of signal importance for Indo-Iranian studies in the Orient. He was the first to recognize the importance of the traditional interpretation of the texts as contrasted with the linguistic or comparative school; and his books, though comparatively few in number, are still, for the most part, of value. His chief contributions were: *Die fünf Rithās* (2 vols., 1858-62); *The Aitareya Brāhmaṇa of the R̥gveda* (2 vols., 1863), his best work in Indian literature; *An Old Zend-Pahlavi and Pahlavi-Pasand Glossary* (2 vols., 1867-70), in collaboration with Hoshengji Jamaspji; *Ueber den Character der Pehlvi Sprache* (1869); *Introductory Essay on the Pahlavi Language* (1870); *The Book of Arda Vīraf* (2 vols., 1872-74), in collaboration with E. W. West; *Essays on the Parsis* (3d ed., 1884). Consult Evans, in West's edition of the essays, and Bezenberger, *Beiträge zur Kunde der indogermanischen Sprachen*, vol. i (Göttingen, 1876).

HAUG, ROBERT (1857-). A German battle painter, born in Stuttgart. His studies were begun at the Art School of Stuttgart and continued at Munich in the academy. At the Munich International Exposition of 1888 he attracted very favorable notice by his two works, "The Prussians near Mückern" (Stuttgart Museum) and "Volunteer Riflemen of 1813" (National Gallery, Berlin), the latter of which also obtained the gold medal at the Berlin Exposition in 1891. He became an instructor in the Stuttgart Art School in 1894. His further works, for the most part scenes from the War of Liberation, characterized particularly by atmospheric effects, include: "The Farewell" (Munich Pinakothek); "At Dawn" (1891, Dresden Gallery); "The Approach of Blücher's Army to the Rhine" (1893), "Fight in the Streets of Leipzig, October, 1813" (1895, Leipzig Museum); "The Castle Guard" and "Battle in a Cornfield" (National Gallery, Berlin). To a sound naturalistic technique he unites a narrative talent of a high order.

HAUGHTON, HAYTON, SAMUEL (1821-97). An Irish scientist, born at Carlow, Ireland. He graduated (B.A., 1844; M.A., 1852; M.D., 1862) from Dublin University. From 1851 to 1881 he held the professorship of geology there, and he was also medical registrar. He was elected a fellow of the Royal Society in 1858, served as university representative from 1878 to 1896 on the General Medical Council, was president of the Royal Irish Academy in 1886-91, and in 1883 be-

came president of the Royal Zoölogical Society of Ireland. Besides numerous scientific papers, he is author of *Manual of Elementary Mathematics* (1851), with Joseph Galbraith; *Manual of Geology* (1865); *Principles of Animal Mechanics* (1873); *Six Lectures on Physical Geography* (1880).

HAUGIANS, hou'gi-anz. A religious body in Norway, the followers of Hans Nielsen Hauge (1771-1824). He was a peasant, and became an enthusiastic revival preacher early in the nineteenth century, so annoying to the regular clergy that they procured his punishment by fine and imprisonment. He held that the ministry is a common duty, and that ordination for the service is not necessary; that Church creeds and confessions are of small account, but faith and works are everything; and he laid much stress upon strict discipline. He gained many followers, particularly from the lower classes, and his work was continued after his death. For the life of Hauge, consult Bang (Christiania, 1875). His name is commemorated in Hauge's Synod, one of the independent Lutheran bodies of the United States. The synod was organized in 1846-50 by immigrants from Norway. Its main strength is in the States of Minnesota, South Dakota, and Wisconsin.

HAUGWITZ, hau'vits, CHRISTIAN HEINRICH KARL, COUNT (1752-1831). A Prussian statesman, born near Oels in Silesia, and educated in law at Halle and Göttingen. His mystical philosophy won him the favor of Frederick William II, who sent him to Vienna as Ambassador, and in 1792 appointed him Minister of Foreign Affairs at Berlin. During his administration the second partition of Poland took place (1793), and the humiliating Peace of Basel was signed (1795). When the French occupied Hanover in 1803, Haugwitz resigned; but two years later, when the French troops had entered Ansbach, he was sent to treat with Napoleon, and after Austerlitz signed the treaty ceding Ansbach, Cleves, and Neuchâtel to the French and giving Hanover to Prussia. Received by Napoleon when the latter was characteristically in a rage, he was forced to cede about twice as much territory as his instructions authorized. Soon after he replaced Hardenberg as Prime Minister, but was unable to better the relations with France, and after Jena retired to his estates in Silesia and Poland. Consult Minutoli, *Der Graf von Haugwitz und Job von Witzleben* (Berlin, 1844).

HAUK, MINNIE (1852-1912). An American dramatic soprano. She was born in New York, of German parentage, and studied both at home and in Europe. Her first appearance was on the concert platform in New Orleans (1865), and three years later she made her operatic début in New York City. The same year she appeared in Italian opera in London with great success. The following year she was engaged as the prima donna of the Vienna Court Opera and from 1873 to 1875 was employed in a like capacity at Berlin. She also sang with marked success in every capital of the civilized world. Her repertoire included about 100 rôles. In 1881 she married Ernst von Hesse-Wartegg (q.v.). She retired from the stage in 1896.

HAUKSBEE, haks'bē, FRANCIS, THE ELDER (?-c.1712). An English physicist, admitted to the Royal Society of London in 1705, and who made a number of brilliant discoveries. Little is known of his life save through his scientific

papers which were published in the *Philosophical Transactions*, and a volume on *Physico-Mechanical Experiments on Various Subjects, Containing an Account of Several Surprising Phenomena Touching Light and Electricity Producible on the Attraction of Bodies*. He discovered that light could be produced by mercury shaken in a glass tube, and that this effect was increased when the action took place in a vacuum. Hauksbee devised one of the first electrical machines and also made improvements in the air pump. He is supposed to have died in 1712, his last papers in the *Philosophical Transactions* appearing posthumously in 1713. He is mentioned by Newton in certain letters.

HAUKSBEE, FRANCIS, THE YOUNGER (1687-1763). An English optician, possibly a son of the foregoing. He was for 40 years previous to his death clerk and housekeeper of the Royal Society, London. He was somewhat of a scientist, being an instrument maker and optician, and is said to have been the first to deliver scientific lectures with experiments in London. "A Course of Mechanical, Optical, and Pneumatical Experiments" was given by Hauksbee, who performed the experiments while the explanatory lecture was delivered by William Whiston, M.A. The syllabus of this course of lectures, as well as those of astronomy and chemistry, is interesting as showing the state of experimental science at that time.

HAULIK DE VÁRALJA, hau'lik dā vā' rōl-yō, (GEORG) (1787-1869). A cardinal and Archbishop of Agram, born at Tyrnau in Hungary. He was a strong defender of the unity of Austria, and a very determined adversary of Kossuth, who in 1849 proscribed him as a traitor. His *Selectiones Encyclicæ Litteræ et Dictiones Sacre* (1850-53), a collection of pastoral letters, is of value to historical study.

HAULLEVILLE, ôl'yēl', PROSPER (CHARLES ALEXANDRE, BARON D' (1830-98). A Belgian publicist, born in Luxembourg, of a French immigrant family from Lorraine. He studied law at Liège, Brussels, and Bonn, and then entered Belgian politics as a member of the Constitutional-Catholic party. He was editor at various times of *L'Universel*, the *Revue Générale*, and the *Journal de Bruxelles*. His books include: *Histoire des communes lombardes depuis leur origine jusqu'à la fin du XVIIIème siècle* (1858); *La définition du droit* (1875); and *De l'avenir des peuples catholiques* (1876), the last of which was translated into nine languages and procured him the position of papal chamberlain.

HAULTAIN, FREDERICK WILLIAM GORDON (1857-). A Canadian statesman and jurist. He was born at Woolwich, England, went to Canada in his youth and was educated at Peterboro Collegiate Institute and Toronto University, and was called to the Ontario bar in 1882. In 1884 he went to the Northwest Territories and for some time was crown prosecutor at Fort Macleod (later included in the Province of Alberta). He was a member of the Advisory Council of the Northwest Territories (1888-97), at the same time a Conservative member of the Northwest Territorial Legislature, and during 1897-1905 Premier, also Attorney-General and Commissioner of Education. In 1890 he was elected a vice president of the Canadian Bar Association. After the organization of Saskatchewan, in 1905, Haultain became the leader of the Conservative party in that Province. In

1913 he was appointed Chief Justice of Saskatchewan.

HAULTAIN, THEODORE ARNOLD (1857-). A Canadian essayist. He was born at Cannanore, India, but went to Canada in his youth and was educated at Toronto University. He afterward studied medicine, but left it for journalism and literature. For some time he was editor of the *Educational Weekly* (Toronto). In 1880-93 he was one of the librarians of the Public Library, Toronto, and later was private secretary to Goldwin Smith (q.v.), until the latter's death in 1910. He was a frequent contributor to leading magazines and reviews in Great Britain and the United States. He published: *A Critique of Cardinal Newman's Exposition of the Illative Sense*; *A Fragmentary Dialogue on Love and Religion*; *Who Should Emigrate?*; *Two Country Walks in Canada*; *The Mystery of Golf* (1908); *Hints for Lovers* (1909); *England's Plight*; *A Returned Exile's Impressions*; *Memoirs of Goldwin Smith* (1911); *Goldwin Smith: His Life and Opinions* (1913).

HAUNTED MAN, THE. A Christmas story by Charles Dickens (1847).

HAUPT, HOUT, ERICH (1841-1910). A German Protestant theologian, born at Stralsund and educated at Berlin. He taught in Gymnasien in Kolberg and Treptow from 1861 to 1878 and was professor of New Testament exegesis successively at Kiel (1878), Greifswald (1883), and Halle (1888). He wrote *Der erste Brief des Johannes* (1869); *Die alttestamentlichen Citate in den vier Evangelien* (1871); *Die Kirche und die theologische Lehrfreiheit* (1881); *Plus ultra, zur Universitätsfrage* (2d ed., 1890); *Die Bedeutung der heiligen Schrift für den evangelischen Christen* (1891); *Zum Verständnis des Apostolats im Neuen Testament* (1896); two volumes of sermons (1890-1905); etc.

HAUPT, HERMAN (1817-1905). An American engineer, born in Philadelphia, Pa. He graduated at West Point in 1855, but in the same year resigned a commission in the Second Infantry to become an assistant engineer on the public works of Pennsylvania. In 1844 he became professor of civil engineering and mathematics in Pennsylvania College, but three years later he resumed the practice of his profession, as principal consulting engineer of the Philadelphia Railroad, of which he became successively the general superintendent and chief engineer. He was chief engineer of the Hoosac Tunnel from 1856 to 1861. In the Civil War he was chief of the United States Bureau of Military Railroads and served on the staff of General McDowell with the rank of colonel. From 1872 to 1876 he was general manager of the Piedmont Air-Line Railroad, from 1876 to 1878 was chief engineer of the Pennsylvania Transportation Company and Seaboard Pipe-Line, from 1881 to 1885 was general manager, and 1885 to 1886 was general superintendent of the Northern Pacific Railroad. He invented a drilling machine that won the highest prize of the Royal Polytechnic Society of Great Britain and was the first to prove the practicability of transporting oil in pipes. He wrote: *Hints on Bridge Building* (1840); *General Theory of Bridge Construction* (1852; new ed., 1879); *A Consideration of the Plans Proposed for the Improvement of the Ohio River* (1855); *Military Bridges* (1864). Consult his *Reminiscences* (1902).

HAUPT, LEWIS MUHLENBERG (1844-). An American civil engineer, born in Gettysburg, Pa. He was educated at Harvard and at West Point, became lieutenant of lake surveyors by 1868, and in the following year was attached to a military district in Texas. From 1872 to 1892 he was professor of civil engineering in the University of Pennsylvania and in 1885-86 was editor of the *Engineering Register*. In 1886 he invented a method for marking channels. He was a member of the Nicaraguan and the Isthmian Canal commissions (1897-99), was president of the Colombia-Canea Arbitration (1897), was chief engineer of the survey for ship canals across New Jersey, and was consulting engineer on the construction of the Ohio-Lake Erie ship canal. In addition to his numerous contributions to engineering journals his publications include: *Working Drawings and how to Make and Use them* (1881); *The Topographer: His Methods and Instruments* (1884); *Physical Phenomena of Harbor Entrances* (1887); *Canals and their Economic Relation to Transportation* (1890); *A Move for Better Roads* (1891); *The Mississippi River Problem* (1904); *Transportation in the United States* (1907).

HAUPT, MORITZ (1808-74). A well-known German philologist. He was born at Zittau and studied from 1826 to 1830 at Leipzig, where in 1841 he was appointed professor of the German language and literature. For having participated in the agitation of 1848-49, in support of the maintenance of the Imperial constitution, he was deprived of his professorship. In 1853, however, he was called to Berlin to succeed Lachmann as professor of classical literature. In 1861 he became perpetual secretary of the Academy of Sciences. By his painstaking and scholarly critical work he rendered distinguished service to both classical and German philology, chiefly as an editor of texts. In the former field he published: *Quintus Catullianus* (1857); *Observationes Criticæ* (1841); editions of Horace (4th ed., 1881), Catullus, Tibullus, Propertius (5th ed., 1885), Vergil (2d ed., 1873), and other classical writers. As his chief contributions to German philology, he edited Hartmann von Aue's *Erec* (1839), *Lieder und Büchlein*, and *Der arme Heinrich* (1842); Rudolph von Ems's *Der gute Gerhard* (1840); the poems of Gottfried von Neifen (1851); and the *Moritz von Frauon* (1858) and *Von dem übeln Weibe* (1871) of Neidhard von Reuenthal, and, above all, Konrad von Würzburg's *Engelhard* (1844; new ed., 1890). He also edited Æschylus from the papers of Hermann (2d ed., 1858), and completed Lachmann's edition of the Mediæval German lyrics of the Minnesingers (*Des Minnesangs Frühling*, 4th ed., 1888). In 1836, with Hoffmann von Fallersleben, he founded the *Alt-deutsche Blätter*, succeeded in 1841 by the *Zeitschrift für deutsches Altertum*, which he edited until his death. His numerous briefer contributions are collected in his *Opuscula* (3 vols., 1875-76); and his *Französische Volkslieder* appeared posthumously in 1877. Consult: Belger, *Moritz Haupt als akademischer Lehrer* (Berlin, 1879); Nettleship's lecture (Oxford, 1879), later incorporated in his *Lectures and Essays, First Series* (Oxford, 1885); Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

HAUPT, PAUL (1858-1926). A Semitic scholar, one of the pioneers of Assyriology in America. He was born at Stritz, Germany,

Nov. 25, 1858. He studied at the universities of Berlin and Leipzig. In 1880 he became privat-docent in the University of Göttingen and from 1883 to 1889 was assistant professor of Assyriology. In 1883 he became professor of Semitic languages at Johns Hopkins University, but until 1889 continued to lecture in the summer at Göttingen. Besides numerous smaller articles, he projected and edited the *Polychrome Bible*, a critical edition of the Hebrew text of the Old Testament, and a new English translation with notes. A unique feature of this edition is the use of different colors to distinguish the various sources and component parts in the Old Testament books—each one of which is intrusted to a specialist in biblical studies. Among his Assyriological publications may be mentioned his edition of the *Nimrodos* (the Gilgamesh epic, 1884-91); *Akkadische und sumerische Keilschrifttexte* (1881-82); *Die akkadische Sprache* (1882); *Sumerische Familiengesetze* (1883). He also became in 1881 coeditor with Friedrich Delitzsch of the *Beiträge zur Assyriologie und semitischen Sprachwissenschaft*, published in Leipzig. He published critical texts with notes of *Canticles* (1902); *Kohleth* (1905); *Ecclusiastes* (1905); *Nahum* (1907); *Esther* (1908); *Micah* (1910); *Biblische Liebeslieder* (1907); "Die Schlacht von Tannach," in *Studien* . . . *Wallhausen gewidmet* (1914).

HAUPTMANN, ANNA P. MILDER. See MILDER-HAUPTMANN.

HAUPTMANN, haupt'mân, GERHART (1862-). One of the greatest of modern German dramatists. He was born in Salzbrunn, son of a hotel keeper and grandson of a weaver. After some years of schooling he worked for a time on a farm. In 1880 he entered the art school in Breslau to become a sculptor, unable yet, however, to decide between this art and poetry. He then went to Jena, where his brother Carl was studying, and heard the lectures of Ernst Haeckel. In 1883 he sailed from Hamburg to Genoa, whence he visited Naples, Capri, and Rome. Here he set up a studio and tried sculpture again. His success was not great. Illness drove him home to Germany, where in 1885 he married Marie Thienemann, a lady of wealth. Then came two semesters of study at the University of Berlin. His interest in natural sciences and sociology continued. In 1888 he removed to a country house in Erkner. In 1889 he wrote his drama *Vor Sonnenaufgang*, which Otto Brahm produced in the Free Theatre. He owed, at the beginning of his career, much also to the publisher Fischer and to Paul Schlenther, later director of the Burgtheater in Vienna. His first work, *Promethidenos* (1885), was an epic. His dramas, *Vor Sonnenaufgang* (1889), *Das Friedensfest* (1890), *Ein samo Menschen* (1891), and *Die Weber* (1892), show the influence of Zola, Ibsen, and Tolstoy, a spirit of revolt against the social conditions and the artistic ideals of a military and capitalistic state. Thus the young Hauptmann, with the young Sudermann, was for a time leader of a second Young German movement, and the production of *Vor Sonnenaufgang* at the Free Theatre of Berlin was the signal for a contest, recalling in a way that over the *Cid* or *Hernani*. The quiet and retiring poet became at once a notoriety. These dramas were aggressively democratic, social, realistic. His actors are no longer persons or characters, they are described as "people in action," who walk, talk, and act as in everyday life, or

at least seem to do so, by an art that hides art. And it is everyday life of which they speak, the sordid social struggles of to-day in which they are engaged, the vulgar vices that hold them in a gloomy, brutal grasp. This naturalism is as pessimistic as that of Zola. *Die Weber* constantly suggests *Germinal*, but the poet and the artist in Hauptmann here rises above the theorist and the philosopher. In 1892 he published two novelistic studies, *Der Apostel* and *Bahnwärter Thiel*, neither successful.

Up to 1892 Hauptmann might have seemed morbidly ethical in tragedy. He was now to show himself in *Kollege Crampton* (1892) and *Der Biberpols* (1893) capable of painting delightful pastels of humorous character, though it is here with a professional thief and there with a drunkard that we have to do. And presently in *Hanncles Himmelfahrt* (1894) he appears in still another character as an extreme idealist, dealing no longer with vice, hunger, and mental decay, but with dreams, fantasies, and faith. *Hanncle* is a mystic poem. So is *Florian (Ceyr)* (1895), a stage failure; and *Die versunkene Glocke* (1897; trans. by Meltzer, 1900) calls itself a "fairy drama." Then may be noted in *Führmann Henschel* (1898) a turn from mysticism to an idealized realism in a situation suggesting that of Balzac's *La rabouilleuse*, though its fundamental naturalism is tempered by a spiritual restraint that comes from a great poet's moral intuition. Here Hauptmann has touched earth again as the poet of social altruism, giving to the German working class an artistic expression of their own weakness. *Schluck und Jau* (1900), a farce, is a romantic adaptation of an Arabian tale; and his next drama, *Michael Kramer* (1900), while abounding in lines of sententious eloquence, is sordid in subject, and proved on the stage a melancholy failure. *Der arme Heinrich* (1902) showed little dramatic strength, but *Rosa Bernd* (1903) is powerful in its realistic portrayal of a woman's downfall. It was followed by *Elga*, written in 1896, a dream tragedy; *Die Jungfern von Bischofsberg* (1905), a comedy; and the Silesian drama *Und Pippa tanzt* (1906), where symbolism is carried to an extreme and all meaning is lost in a complexity of passions and motives. Then followed the historical drama *Kaiser Karls Geisel* (1908); the entertaining book of travel *Griechischer Frühling* (1908); *Giselda* (1909), an historical drama; *Der Narr in Christo Emanuel Quint* (1910), a powerful novel; the tragi-comedy *Die Ratten* (1911); the tragedy *Gabriel Schillings Flucht* (1911); the novel *Atlantis* (1912); and *Festspiel für Breslau* (1913). Many of Hauptmann's writings have been translated into English, French, and other languages. An authorized edition of his *Dramatic Works*, edited by Ludwig Lewisohn, appeared in New York (1912 et seq.). In 1896 and in 1899 he won the Grillparzer prize, in 1912 the Nobel prize for literature, and in 1905 Oxford University conferred a doctor's degree upon him. With his second wife, Margarete Marschall, he made his home in Magnetenlof in the Giant Mountains, Silesia. Consult for biography: Paul Schlenther (Berlin, 1898); A. Barthels (2d ed., ib., 1906); U. C. Werner (Munich, 1900); for literary estimates: B. Litzmann, *Das deutsche Drama in den literarischen Bewegungen der Gegenwart* (4th ed., Hamburg, 1898); E. Steiger, *Das Werden des neuen Dramas* (Berlin, 1898); Leo Berg, *Der Ueber-*

mensch in der modernen Litteratur (Munich, 1893); id., *Neue Essays* (Oldenburg, 1902); W. Bülsche, *Hinter der Weltstadt* (Leipzig, 1901); G. Brandes, *Menschen und Werke* (3d ed., Frankfurt, 1900); H. Bulthaupt, *Dramaturgie des Schauspiels*, vol. iv (3d ed., Oldenburg, 1902); J. E. von Grothaus, *Probleme und Charakterköpfe* (Stuttgart, 1898); F. Servaes, *Präudien* (Berlin, 1899); Kuno Francke, *German Ideals of To-Day* (Boston, 1907); E. E. Hale, Jr., *Dramatists of To-Day* (6th ed., New York, 1911); G. H. Röhr, *Gerhart Hauptmanns dramatisches Schaffen* (Dresden, 1912); K. Holl, *Gerhart Hauptmann: His Life and his Work* (Chicago, 1914).

HAUPTMANN, MORITZ (1792-1868). A German composer and eminent writer on the theory of music, born at Leipzig. He was educated as a musician and studied the violin and composition under Spohr. His opera, *Mathilda* (1826), was very successful, but it was not until 1842, when he became cantor and musical director at the Thomasschule in Leipzig, that his genius as a teacher was universally acknowledged. His pupils, among whom were F. David, Kiel, Joachim, Sullivan, Von Bülow, and Cowen, cherished an enthusiastic admiration for him, and at his death Leipzig was in mourning. Of his compositions, all of which are marked by purity and beauty of style, the best are his motets. He embodied the result of many years' labors in his *Die Natur der Harmonik und Metrik* (1853; 2d ed., 1873; Eng. trans., 1888), which was a work of paramount importance and the foundation of modern musical theory.

HAURAKI (hou-rä'kē) **GULF**. An inlet on the east coast of North Island, New Zealand, 70 miles long and 40 miles broad (Map: New Zealand, N., B 3). The Great Barrier Island forms a natural breakwater at its entrance, and it contains numerous picturesque islands and good harbors. Auckland, considered to have the best harbor in New Zealand, and Thames are the chief towns on its shores.

HAURAN, hou-rän' (Ar. *el-Hauran*, Gk. *Ἀσσυρία*, *Assyria*). A district of Syria, east of the Jordan (Map: Palestine, E 2). In a wider sense the name is used to designate the Turkish province including Hauran proper, Jedur, Jaulan, and part of the hill country south of the Yarmuk. Whether the Hauran mentioned by Assurbanipal (608-625 B.C.), on the Rassam cylinder (vii, 111), was intended as a designation of this larger territory cannot be determined. But in Ezek. xlvii, 16-18, Jaulan is clearly included in the description. In a narrower sense Hauran extends east of Jaulan to the desert and from the District of Damascus to the Yarmuk. This tract of land includes: (1) el Nukra, 'the cavity'; (2) el Leja, 'the refuge'; and (3) el Jebel, 'the mountains.' El Nukra is a hollow east of Jaulan, south of el Leja, and west of Jebel el Druze, 1500 to 2000 feet above sea level, with an exceedingly rich soil, formed by decomposed volcanic matter. El Leja is composed entirely of lava found in great masses and in fantastic shapes, with little vegetation. El Jebel is the high mountain region, with the lofty peaks of el Kuleib and the fortress of Salkhad. The country is watered by a number of streams that flow into the Yarmuk (Sheriet el Menadireh). The oldest monument is probably the so-called Job stone at Sheikh Saad, which is now known to have been erected by Ramesses II (1810-1244 B.C.). The underground dwellings are no

doubt much older. None of the cities of which ruins now exist can be regarded as older than the Græco-Roman period; but there may have been older cities on the same sites. There are at least 300 deserted towns in Hauran very solidly built and testifying to the flourishing condition of this region in earlier times. Great houses, built entirely of basalt, have been perfectly preserved and arouse the amazement of travelers. Numerous Greek inscriptions have been found, both Christian and pagan. Expeditions sent out by Princeton University undertook a systematic exploration of Hauran in 1899-1900, 1904-05, and 1909; and their observations on the geography and architecture, as well as numerous Greek, Latin, and Semitic inscriptions, have been published. The country has in recent times been inhabited by the Druses (q.v.). A railroad extends from Damascus to Muzerib. Consult: Wetzstein, *Reisebericht über Hauran und die Trachonitiden* (Berlin, 1860); Rey, *Voyage dans le Hauran* (Paris, 1861); Porter, *The Giant Cities of Bashan* (London, 1865); id., *Travels in Damascus and Hauran* (ib., 1870); Burton and Drake, *Unexplored Syria* (London, 1872); Schumacher, *Across the Jordan* (London, 1883); Merrill, *East of the Jordan* (New York, 1883); G. A. Smith, *Historical Geography of the Holy Land* (London, 1895); Ewing, *A Journey in the Hauran* (ib., 1895); Dusseau and Macler, *Voyage archéologique au Sinaï et dans le Djebel ed-Druze* (Paris, 1901); Bell, *The Desert and the Sown* (London, 1907); *Publications of an American Archaeological Expedition to Syria, 1899-1900* (Leyden, 1904-08); *Princeton University Publications of Archaeological Expeditions to Syria, 1904-1905 and 1909* (ib., 1908-13).

HAURANNE. See DUVERGIER.

HAURÉAU, ô'rá'ô', JEAN BARTHÉLÉMY (1812-96). A French historian and politician, born in Paris. He was educated in the colleges of Louis le Grand and Bourbon and became a revolutionary writer on the staff of several metropolitan newspapers before he went to edit the *Courrier de la Sarthe* (1838-45) in Le Mans, where he also became city librarian. Thence he returned to the *National* in Paris, and after the revolution of 1848 he was made keeper of the manuscripts in the National Library, retaining the position until the coup d'état of Dec. 2, 1852. He was sent by the Department of Sarthe to the Constituent Assembly, after the dissolution of which he abandoned politics. He was made librarian of the *Ordre des Avocats* in 1861 and director of the National Printing Office in 1870, but retired in 1882. He was Commander of the Legion of Honor from 1878. He wrote: *François I et sa cour* (1853); *Charlemagne et sa cour* (1854); *Gallia Christiana* (1856-65); *Histoire de la philosophie scolastique* (1872-80), his best-known work.

HAURIENT (from Lat. *hauriens*, pres. p. of *haurire*, to draw water). A term in heraldry (q.v.), applied to a fish placed upright per pale.

HAUSA (hou'sä) **STATES**, or **HAUSA LAND**. A term of ethnographical rather than geographical significance. It now designates that part of Nigeria (q.v.) which lies north of the Benue and Niger rivers. It embraces the kingdoms of Sokoto (q.v.) and Nupe. The former includes the subsultanate of Gando, and the Kalam, Muri, Bautehi, and Jauri territories, and the Adamawa Empire. Bornu borders on the east, and the Niger from Lokodja to Birni

borders on the west. The total area is estimated at 150,000 square miles, with about 4,000,000 inhabitants. The Hausa people are negroes with much admixture of other races—Tuareg, Berber, Fulah, etc. Their cranial index, or ratio of head width to head length, is 77.3. They are said to be intelligent, industrious, and hospitable, and are one of the most civilized races of Central Africa. They engage in agriculture, cattle raising, and commerce, and make good artisans. They form a large part of the military forces of Great Britain in Nigeria and also of Belgian Congo. For the most part they have adopted Mohammedanism from their conquerors, the Fulahs. The Hausa language has become that of trade over a large region to the westward and northward to the Barbary states. It represents an isolated branch of the Hamitic family of languages. An association for its study was formed in London in 1892, and a professorship has been established at Cambridge. Another race found in the region is the Tukulor. The Hausa Empire is supposed to have been very powerful about the middle of the fifteenth century. It gradually became divided up into states, some of which represented the highest civilization of the Sudan. The Fulahs entered the country gradually and in the early part of the nineteenth century made themselves masters of the whole region. Consult: Robinson, *Hausaland* (London, 1896); *Hausa Literature* (Cambridge, 1896); *Hausa Grammar* (London, 1897); Robinson and Brooks, *Hausa Dictionary* (Cambridge, 1899-1900); Rettruy, *Hausa Folk-Lore, Customs, Proverbs* (2 vols., Oxford, 1913). There are also grammars by Schoen (London, 1892) and Marre (Vienna, 1901); a sketch summarizing the reasons for regarding Hausa as a Hamitic tongue is given in Meinhof, *Die Sprachen der Hamiten* (Hamburg, 1912).

HAUSEGGER, houz'g-er, FRIEDRICH VON (1837-99). An Austrian writer on musical theory, born at Vienna. He studied music with Salzman and Otto Dessoff and, after practicing law for some time at Graz, became in 1872 a teacher of music at the university there. His most important book is *Musik als Ausdruck* (1885); and *Richard Wagner und Schopenhauer* (1892) and *Vom Jenseits des Künstlers* (1893) are also valuable.

HAUSEGGER, SIEGMUND VON (1872-). An Austrian composer and conductor, born at Graz. While attending the Gymnasium and university, he received at the same time thorough musical instruction from his father (see **HAUSEGGER**, FRIEDRICH VON), Degner, and Pohl. In 1895-96 he was conductor at the Graz Opera, in 1897 assistant conductor at Bayreuth. He became more widely known when he directed with marked ability the famous "Kaim Konzerte" in Munich from 1899 to 1903. For the next three years he was conductor of the "Museum Konzerte" in Frankfurt. He composed (on his own text) the operas *Zinnhohler* (1898), *Helfried* (1903); the symphonic poems *Dionysische Fantasie*, *Barbarossa*, *Wieland der Schmied*; a grand mass, and several very impressive male choruses with orchestra.

HAUSEN, houz'en, MAX, BARON VON (1848-1922). A German soldier and administrator, born in Dresden, son of a lieutenant general. He entered the army when he was a mere boy, was a second lieutenant at the age of 18, and served in the war with Austria in 1866 and in the Franco-German War. In 1871-74 he was at

the Berlin Military Academy, in 1875-87 and 1892-97 on the general staff, in 1900 commanding general of the Twelfth Army Corps, in 1901 general of infantry, in 1902 Minister of War for Saxony and representative of the kingdom in the Bundesrat, in 1910 "generaloberst," and in 1912 head of the Saxon Ministry. In 1914 he was put in command of the Saxon army of the centre, but in October of that year he was replaced by General von Einen. See **WAR IN EUROPE**.

HAUSER, houz'er, FRANZ (1794-1870). A Bohemian opera singer, born at Prague. He was a pupil of Tomaschek and had a remarkable barytone voice. From 1817 to 1837 he sang with great success in Prague, Dresden, Vienna, London, Berlin, etc., and from 1846 to 1864 was director and singing teacher at the Munich Conservatory. He had a splendid collection of Bach's works, and his correspondence with Hauptmann and Mendelssohn is interesting. He died at Freiburg, Baden.

HAUSER, KASPAR. A German youth whose mysterious history attracted the attention of Europe during the nineteenth century. On May 26, 1828, a shoemaker of Nuremberg discovered the youth, evidently helpless, in the market place. He was dressed in peasant's clothing and appeared to be about 16 years of age. When questioned, he merely uttered a few incoherent words to the effect that he wanted to be a cavalry officer. He had upon him, however, a letter addressed to an officer who resided in the neighborhood. The letter, which purported to be written by a Bavarian laborer, stated that on Oct. 7, 1812, the bearer had been left by his mother, whose name was unknown, at the writer's door; that the lad had been taught to read and write; and that he now wished to enter the army and to serve in his father's regiment. Inclosed was a note, supposed to have been written by the mother, which declared that the foundling's name was Kaspar; that he was born April 30, 1812; and that she, the mother, a poor girl, was unable to care for him. The first letter was written in German, the second in Roman characters; but the hand was the same, and there was evidence of an intent to mislead. The Nuremberg authorities, at a loss to know what to do with the boy, sent him first to prison, where he was visited by crowds of curious persons, and later placed him under the care of a schoolmaster. He now developed very rapidly; for though at first he appeared to have the intelligence of a normal child of two or three years, within a twelvemonth he wrote a brief account of his life, and in the following year (1829) a longer biography, both of which were published. A new mystery was added on Oct. 17, 1829, when Kaspar was found bleeding severely from a wound in the forehead. His story was that he had been attacked by "the man," presumably the man who had originally brought him to Nuremberg. The circumstance created a sensation in the town, but no trace of the assailant was discovered. In 1831 the youth attracted the attention and sympathies of the Earl of Stanhope, who adopted him and sent him under the care of a teacher to Ansbach. This date, however, marks the turning point in his career. Not only did he make no further progress, but signs of deterioration appeared. Whether his head was turned by vanity, resulting from the extraordinary interest taken in him by persons of all classes, or whether he had

reached the limits of his powers, it is difficult to say. The fact is that he became disobedient, untruthful, secretive, and moody; he refused to apply himself to his studies; and his teachers were reduced to despair. His friends turned against him, and even Stanhope was led to mistrust him. On Dec. 14, 1833, he rushed into his teacher's room, and with wild gestures and broken speech gave him to understand that he had been stabbed. Four days later he died.

The above statements in the case are generally accepted. Further details, however, are uncertain. Hauser's account of his early life, many of the particulars of which conflict, was to the effect that he had lived in a dark "prison," too small to permit of an upright posture or any freedom of movement; that his diet was bread and water, and that he slept on straw; and that shortly before his appearance in Nuremberg "the man" had taught him to write and to walk. The best test of this narrative would, of course, be a report of his physical condition by persons who saw him when he first appeared. Unfortunately, however, the testimony of such witnesses, taken under oath on two separate occasions—the first a year and a half, the second six years after the event—shows the influence both of the long intervals of time and of the numerous speculations which the case had aroused. The evidence of other observers is no less confusing. If Hauser's account be accepted, the theory prevalent at the time, that he was the victim of a nefarious crime, must be considered as probable. It was supposed that he had been kidnaped while an infant and kept in solitary and dark confinement with the purpose of reducing him to idiocy, so that his identity would be lost. (It was further asserted that he was, in truth, the Crown Prince of Baden, the legitimate son of the Grand Duke Charles; and that he had been kidnaped at Karlsruhe in October, 1812, by agents of the morganatic wife of the Grand Duke, who desired to secure the succession to her own offspring. This theory has persisted, despite the publication of the official record of the baptism, the autopsy, and the burial of the heir in question.) But the inconsistencies and the imaginative character of Hauser's narrative make its acceptance questionable; and his stories of the attempts made upon his life were seriously doubted by Stanhope and his teacher.

If the known facts only are taken into consideration, the case may be explained on the hypothesis that Hauser was suffering from the form of hysteria known as somnambulism. (See HYSTERIA; DOUBLE CONSCIOUSNESS.) This view seems the more probable since we know that he was frequently subject to convulsive attacks, and that he was both neurasthenic and hysterical. He had, it may be supposed, a total amnesia for the events of his earlier life; and the autobiographies were pure inventions, created out of his insatiable desire for attention and notoriety. For the same reason the two injuries, the second of which resulted in his death, were self-inflicted.

Consult: Feuerbach, *Beispiel eines Verbrechens am Seelenleben* (Ansbach, 1832); Stanhope, *Materialien zur Geschichte K. Hauser's* (Heidelberg, 1836); Evans, *Story of Kaspar Hauser from Authentic Records* (London, 1892); Lang, "The Mystery of Kaspar Hauser," in *Historical Mysteries* (ib., 1904); "Kaspar Hauser," in *Quarterly Review* (ib., 1888).

HAUSMANNITE, hous'mân-îť. A manga-

nese manganate crystallizing in the tetragonal system, black in color, with a submetallic lustre. Hausmannite occurs with other manganese ores in Thuringia, in the Harz District of Germany, and in Sweden.

HAUSRATH, hous'rüt, ADOLF (1837-1909). A German Protestant theologian, born at Karlsruhe. He was educated at Jena, Göttingen, Berlin, and Heidelberg, and was appointed professor extraordinary of ecclesiastical history at Heidelberg in 1867. His publications include: *Der Apostel Paulus* (2d ed., 1872); *Neutestamentliche Zeitgeschichte* (3d ed., 1875-79); *D. F. Strauss und die Theologie seiner Zeit* (1876-78); *Arnold von Brescia* (1891); *Peter Abälard* (1893); *Martin Luthers Romfahrt* (1894); *Die Arnoldisten* (1895); *Karl Holsten* (1897); *Alexander und Luther auf dem Reichstage zu Worms* (1897); *Alte Bekannte* (1899-1901); and, under the name "George Taylor," the historical novels *Antinous* (1880), *Klytia* (1883), *Setta* (1884), *Elfriede* (1885), and *Peter Maternus* (1898); and the stories *Unter dem Katalpenbaum* (1899) and *Potamüna* (1901).

HAUSSA STATES. See HAUSA STATES.

HÄUSSER, hois'ër, LUDWIG (1818-67). A German historian and politician, born at Kleeberg in Lower Alsace. He entered the University of Heidelberg as a student of philology, but under Schlosser's influence soon devoted himself to history, the study of which he continued at the University of Jena. After his graduation he taught for a number of years, spent some time in Paris, and in 1845 was appointed professor of history at Heidelberg. Soon afterward he became interested in the political movements of the day and wrote a pamphlet on *Schleswig-Holstein, Deutschland und Dänemark* (1846). At the beginning of 1847 he was chosen an editor of the *Deutsche Zeitung*, and in November of the same year was elected to the Second Chamber of the Baden Legislature, where he supported the federal constitution. He took no part in the May revolution of 1849, and the next year again became a member of the Legislature, but resigned in October and devoted himself to his historical studies. From 1860 to 1865 he was again a member of the Second Chamber and supported the Liberal ministry. He was one of the founders of the *Süddeutsche Zeitung*, and in December, 1863, took part in the assembly of representatives of the German states at Frankfurt. He was a member of the "little German" party, which worked to exclude Austria from the confederation. Though Häusser was conspicuous in politics, his fame rests chiefly upon his historical works. He was a brilliant and inspiring lecturer. His chief work, *Deutsche Geschichte vom Tode Friedrichs des Grossen bis zur Gründung des deutschen Bundes* (4 vols., 1854-57; 4th ed., 1899), is a striking achievement of modern German methods of historical research. Among his numerous other publications are *Geschichte des Zeitalters der Reformation* (1868; 2d ed., 1879) and *Geschichte der Französischen Revolution* (1867; 3d ed., 1891), which were issued after his death. Many of his lectures, edited from stenographic reports, have also been published.

HAUSSEZ, ô'ss', CHARLES LEMEROIER DE LONGPRÉ, BARON D' (1778-1859). A French politician, born at Neufchâtel, of an aristocratic family, and famous for his maxim "All for the people, nothing by the people." At 16 he be-

gan to take a part in conspiracies against the Directory and the Consulate and was an enthusiastic supporter of the Empire, but joined the Royalist party on the return of the Bourbons. In 1829 he became Naval and Colonial Minister and in the following year was forced to flee to England because of his loyalty to Charles X. He was condemned to perpetual imprisonment; but in 1830, after extensive travels in Italy, Switzerland, and Germany, benefited by the amnesty to return to France. Among Haussez's works the following may be mentioned: *Réflexions d'un ami du roi* (1816); *La Grande Bretagne en 1833* (1833); *Voyage d'un exilé* (1835); *Alpes et Danube* (1837); *Études morales et politiques* (1844 and 1851). From his political memoirs excerpts were published in the *Revue de Paris* (1894).

HAUSSMANN, ȝs'mîn', GEORGES EUGÈNE, BARON (1809-91). A French official under the Second Empire, whose name is associated with the reorganization of the physical conditions in the city of Paris. He was born in Paris and was educated at the Conservatory of Music, but became an advocate. After the revolution of 1830 he was sous-préfet successively of Nérac, Saint-Girons, and Blaye, and under the presidency of Louis Napoleon was Prefect of Var, the Yonne, and Gironde. He was appointed Prefect of the Seine in 1853. While holding this office, Haussmann expended many millions of dollars in rebuilding and beautifying Paris. Parks were planted on the sites of hovels; splendid boulevards were run through the city; squares were laid out; statues, bridges, and magnificent public buildings sprang up with almost miraculous rapidity. In carrying on his work Haussmann let no considerations of private rights or financial expediency stand in the way. His enemies accused him of systematic speculation and declared that his broad boulevards were intended for the rapid mustering of troops and cannon in case of any uprising against the Empire. A stinging pamphlet by Jules Ferry, *Les comptes fantastiques de Haussmann*, and the enmity of Ollivier, who became Minister in 1870, brought about Haussmann's downfall. His work, however, had done much to make the Second Empire popular. In 1857 he was made a senator and elected a member of the Academy of Fine Arts. He was likewise a member of the Imperial Council of Public Instruction. After the fall of the Empire he quitted France for a time. On his return he was appointed director of the Crédit Mobilier and did much to improve the condition of that financial institution. In 1877 he was returned to the Chamber of Deputies by the Arrondissement of Ajaccio in Corsica. He died in Paris on the 11th of January, 1891. The Boulevard Haussmann is named for him. Consult his *Mémoires* (Paris, 1890-93).

HAUSSONVILLE, ȝ'son'vel', GABRIEL PAUL OTHENIN DE CLÉRON, COUNT D' (1843-). A French author and politician, born at Gurcy-le-Châtel. Elected a deputy in 1871, he voted with the Right Centre. He failed of reelection in 1876 because of his lack of loyalty to the Republic and in 1877 retired to private life and literary labors. He was elected to the French Academy in 1888. A staunch Orleanist, he was an active leader of his party until the death of the Comte de Paris, in 1894. Haussouville's more important works are: *Les établissements pénitentiaires en France et aux colonies* (1875); *Sainte-Beuve* (1875); *L'Enfance à Paris*

(1879); *Le salon de Mme. Necker* (1882); *Études biographiques et littéraires* (1879-81); *Mme. de La Fayette* (1891); *Socialisme et charité* (1895); *Lacordaire* (1896); *La duchesse de Bourgogne et l'alliance savoyarde* (1898-1901); *Paris charitable et bienfaisant* (1912). In collaboration with G. Hanotaux, he published *Souvenirs sur Madame de Maintenon* (3 vols., Paris, 1902-04).

HAUSSONVILLE, JOSEPH OTHENIN BERNARD DE CLÉRON, COUNT D' (1800-84). A French statesman and author, born in Paris. He was Secretary to the Embassy at Brussels, then at Turin, then at Naples, and from 1842 to 1848 represented Provins in the Chamber of Deputies. He was not a great speaker, but was an active member of the Conservative party until the revolution of 1848, when he retired and devoted himself to literature. His most important works are: *Histoire de la politique extérieure du gouvernement français de 1830 à 1848* (1850); *Histoire de la réunion de la Lorraine à la France* (1854-59); *L'Eglise romaine et le premier empire* (1864-69), the work which gained him admission to the Academy in 1869. During the Franco-German War he wrote political letters valuable for their opportuneness more than for their literary style, notably *La France et la Prusse devant l'Europe*. After the peace he became the protector of exiles from Alsace and Lorraine who wished to continue under French rule. His wife, Louise de Broglie, was also a writer, and the Count supported her brother, the Duke, in politics, against M. Thiers. He became senator for life in 1878.

HAUSTORIA (Neo-Lat. nom. pl., from *haustor*, drawer, from *haurire*, to draw). A term applied to special structures which are found in a variety of plants, and whose function is that of attachment and suction. Some of the best illustrations of such outgrowths are found among parasitic fungi, in which the mycelium

HAUSTORIA OF DODDER.

1. Haustorium enlarged. 2. Dodder vine, showing positions of haustoria.

puts out processes that penetrate the cells of their hosts. In the interior of the host cell the haustorium usually enlarges, and through the greatly increased surface it is able rapidly to absorb nourishment for the fungus. Such haustoria generally cause the death of the host cells.

Haustoria of a far more complicated structure are found in higher plants, as the dodder (*Cuscuta*), and such parasites as the beechdrop and broom rape (*Orobanchaceæ*), which live on the roots of certain plants. In these groups the *haustoria* are probably really adventitious roots, but the structure becomes greatly modified. They penetrate the tissue of the host and establish a direct connection with the conducting vascular bundles, so that the parasite actually taps the sources of food supply, water, and organized food material, and draws off what it needs. See DODDER.

HAUTOIS, hō'boi. See OBOE.

HAUTEFUILLE, ô'tfē'y', PAUL GABRIEL (1836-1902). A French mineralogist and chemist, born at Étampes, and educated at the Ecole Centrale, in which he taught metallurgy, and was director of the chemical laboratory until 1885. In that year he became professor of mineralogy in the University of Paris. His written work appeared mostly in technical journals, especially in the *Comptes Rendus* of the French Academy of Sciences.

HAUTE-GARONNE, ô'tgā'rūn'. A department in the south of France, bounded on the south by the Pyrenees (Map: France, S, F 5). Area, 2458 square miles; pop., 1901, 448,441; 1911, 432,126. From the foothills of the northern part it gradually rises in the south until it attains a height of 10,000 feet in the Pyrenees. It is watered by the Garonne, within the basin of which it lies. The soil in the valleys is very productive and yields heavy crops of grain, maize, beans, and vegetables. Orchard fruits, with melons, chestnuts, and tobacco, are produced in abundance, and the annual yield of wine is large. Rock salt is produced, fine marble quarried at Saint-Béat, and zinc and lead are found in the mountains. The chief manufactures are woolen and cotton fabrics, hardware, boots and shoes, and tobacco. The department was formerly divided between the provinces of Languedoc and Gascony. Capital, Toulouse.

HAUTE-LOIRE, ô'tlwā'r'. A central department of France, formed mainly from portions of Auvergne and Languedoc (Map: France, S, I 3). Area, 1931 square miles. The surface is mountainous, covered by the Cévennes, Bontières, Megal, and the Margeride chain. The chief rivers are the Loire, the Allier, the Borne, and the Lignon. The soil of the plains is fertile, and agricultural produce, consisting of grain, vegetables, and fruits, is abundant. Fine cattle are raised, and iron, coal, copper, lead, and other minerals are found. There are important manufactures of silk and lace, the latter employing over 90,000 women. Capital, Le Puy. Pop., 1901, 314,058; 1911, 303,838.

HAUTE-MARNE, ô'tmārn'. A department in the northeastern part of France, southeast of the Department of Marne (Map: France, N, L 4). Area, 2416 square miles. The surface is generally hilly and mountainous in the south and east, descending in gentle slopes towards the north, or Bassigny; about one-fourth is in forest. The principal rivers are the Marne, with its tributaries, and the Meuse. Oats and wheat are largely cultivated, and wines are produced in several parts—Aubigny and Montsaugcon. The department is rich in iron ore, the production of which forms the principal branch of industry. Cutlery, basket making, brewing, and tanning are also carried on. Capital, Chaumont. Pop., 1901, 226,545; 1911, 214,765.

HAUTERIVE, ô'trēv', ALEXANDRE MAURICE BLANC DE LANAUTE, COUNT D' (1754-1830). A French diplomat and statesman, born at Aspres and educated at Grenoble, where he became a professor, and at Tours. In 1792 he was made Consul at New York. A false accusation lost him this post, and he was forced to live as a farmer in America until 1798, when he was recalled and appointed chief of the first division of political correspondence in the Ministry of Foreign Affairs. His brochure, *De l'état de la France à la fin de l'an VII*, undertaken at the order of Bonaparte, won him a high place under the Consulate and Empire, and he frequently served as Minister of Foreign Affairs in the absence of Talleyrand. He was decorated with the cross of the Legion of Honor for his fidelity to Napoleon. But his policy of an Austrian alliance clashed with his chief's demand for a Prussian alliance, and he was transferred to the post of director of archives. He directed the affairs of the French cabinet during the Congress of Aix-la-Chapelle. In his later years he interested himself in archaeology, wrote on Egyptian antiquities, and was elected to the Society of Inscriptions (1820).

HAUTES-ALPES, ô'tzālp'. A southeastern department of France, on the Italian frontier, formerly part of the ancient provinces of Dauphiné and North Provence (Map: France, S, L 4). Area, 2178 square miles; pop., 1901, 109,510; 1911, 105,083. It is traversed by the Cottian Alps, which reach their maximum altitude in the department in Les Ecrins (13,462 feet). The chief river is the Durance, noted for its picturesque scenery; also the Drac and the Buëch. Marble is quarried, and anthracite coal and argentiferous lead are mined. The soil is poor and rocky, the average temperature low, and little grain is raised. Pasturage of sheep has destroyed much valuable timber. Capital, Gap.

HAUTE-SAÔNE, ô'tsōn'. A northeastern department of France, bounded on the north by the Department of Vosges, and on the east by Belfort (Map: France, N, M 5). Area, 2075 square miles. It is traversed from north to south by the Saône River. About one-half of the entire area is cultivable land; more than a fourth, comprising the north and northeast districts, is covered with forest-clad mountains. The fertile plains lie at the south, ascending to hills at the north. The highest point is the Ballon de Sevrance (3970 feet). Fruits and tobacco are largely cultivated. Sheep, including some flocks of the merino breed, and cattle are raised in large numbers. Its main manufacture is of iron; also textiles, hosiery, hats, lumber, and chemicals. Coal, copper, manganese, and salt are found. Capital, Vesoul. Pop., 1901, 266,805; 1911, 257,606.

HAUTE-SAVOIE, ô'tsā'vwā'. An eastern department of France, bordering on Switzerland and Italy, formerly part of Savoy, bounded on the north by Lake Geneva. Area, 1750 square miles (Map: France, S, L 2). The summit of Mont Blanc (15,782 feet) is situated in this department; about one-fourth of the surface is forested. The lowest land in the department is 945 feet above sea level; the entire region is a favorite one with tourists. The Rhone is the principal river. In the north, south, and west, some wheat, oats, and fruit are cultivated, but the chief agricultural industry is pastoral. Some coal and asphalt mines are worked, and

there are a few manufactures. Capital, Annecy. Pop., 1901, 263,803; 1911, 255,137.

HAUTES-PYRÉNÉES, ô'tpé'rá'ná'. A southwestern department of France, part of the old Province of Gascony, lying east of the Basses-Pyrénées (Map: France, S, E 5). Area, 1750 square miles. As its name implies, it contains some of the loftiest summits of the Pyrenean chain (the Vignemale, 10,820 feet). The aspect of the scenery is varied. Mountains and precipitous rocks in the south, with a mild climate, attract many tourists; in the central part are agreeable diversifications of hill and dale; while the north has fertile plains. The principal rivers, none of them navigable, are the Adour, the Neste, and the Gave de Pau. The well-cultivated and artificially watered lowlands yield good crops of cereals, vegetables, flax, and fruit of every kind, including the grape, from which excellent wine and brandy are made. The horses are a famous breed, and mules, cattle, sheep, swine, and poultry are raised, and pasturage is carried on in the highlands. The chief manufactures are lumber and textiles. This department—which is the richest part of the Pyrenees in mineral products, especially marble, copper, manganese, lignite, iron, zinc, lead, antimony, slate, and granite—contains also the celebrated sulphur springs of Saint-Sauveur and Capvern, and the hot baths of Bagnères, Barèges, and Cauterets. Capital, Tarbes. Pop., 1901, 215,546; 1911, 206,105.

HAUTE-VIENNE, ô'tvyén'. A west central department of France, formed mainly from portions of the old Limousin, Marche, Pitou, and Berry. Area, 2145 square miles (Map: France, S, F 3). It is traversed by the Monts du Limousin, ranges of low hills, well wooded, which form the dividing line between the basins of the Garonne and Loire. The Vienne River crosses the department from east to west, and there are also the Isle and the Dronne. Though the soil is mostly rocky and sterile, rye, wheat, and other cereals are cultivated in the valleys; cattle are raised on the extensive meadowlands, and chestnuts are grown for local consumption and export; the soil generally, however, is stony, and agriculture is in a backward condition. Mines of iron, lead, copper, and antimony are worked; granite and other building stone are quarried, amianthus, emeralds, and garnets are found, and in the south, near Saint-Yrieix, there are valuable deposits of kaolin, from which the porcelain factories of Sévres and Limoges draw in part their supplies. Capital, Limoges. Pop., 1901, 381,753; 1911, 384,736.

HAUT-REIN, ô'rân'. A former department of France. See BELFORT, TERRITORY OF.

HAÜY, á'wé', RENÉ JUST (1743-1822). A French mineralogist, born in Saint-Just, France. He was educated for the Church and took priest's orders. While engaged in teaching in Paris, he acquired a fondness for botany, but subsequently, hearing Daubenton lecture on mineralogy, he developed an interest in that science. The accidental dropping of a crystal of calcite revealed to him the geometric law of crystallization, on which subject he published more than 100 papers. During the Revolution he was thrown into prison, but was released through the influence of Geoffroy Saint-Hilaire. In 1793 he was appointed on the Commission of Weights and Measures and took a prominent part in the evolution and development of the metric system.

In 1794 he became keeper of the cabinet of mines. Subsequently, in 1802, he became professor of mineralogy in the Museum of Natural History in Paris, where his magnificent collection of crystals is still preserved. Besides being an honorary canon of Notre Dame, he was a member of the French Academy and of other scientific societies. Abbé Haüy's principal works are: *Traité de minéralogie* (1801), in which he contended that the crystalline form should be the principal element in the determination of a mineral; *Traité élémentaire de physique* (1803); *Traité des caractères physiques des pierres précieuses* (1817); *Traité de crystallographie* (1822).

HAÜY, VALENTIN (1746-1822). A French teacher of the blind, brother of René Just Haüy, born in Saint-Just. It is said that his interest in a pianiste stricken with blindness first stimulated his search for a means to alleviate the affliction. This means he first discovered in the printing of raised maps and letters. He started schools for the purpose of giving manual, mathematical, and musical training to the blind; but his zeal outran his discretion, and others excelled him in the carrying out of his ideas. During the ascendancy of Napoleon he lived in St. Petersburg for more than 10 years, working there for the blind. He was twice married, though a priest. The Association Valentin Haüy for the care of the blind does important work among the poor of Paris. His publications include *Essai sur l'éducation des aveugles* (1786) and *Mémoire historique sur les télégraphes* (1810). Consult Streblitzky, *Valentin Haüy à Saint Pétersbourg* (Paris, 1884).

HAÜYNITE, á'wé-nít, or **HAÜYNE**, á'wén. A sodium, calcium, aluminium silicate and sulphate that crystallizes in the isometric system, has a vitreous lustre, and is usually blue to green in color, or more rarely red or yellow. It is found chiefly in igneous rocks, usually in association with nephelite and leucite, occurring especially in volcanic regions, such as in the lavas of Vesuvius, on Mount Somma, and elsewhere in Italy; also in the Azores, Canary, and Cape Verde islands, and in the United States it is found in Montana. The mineral is named after the famous French mineralogist Haüy.

HAVANA, há-vá'ná or há-ván'á (Sp. *La Habana*). The capital of Cuba and the largest city in the West Indies, situated on the north coast of the island, in lat. 23° 8' N. and long. 82° 22' W. (Map: Cuba, C 3). It lies on a peninsula bounded by the Gulf of Mexico and the Bay of Havana. The latter is regarded as one of the safest harbors of the world, while its depth is sufficient for vessels of the greatest draft; its narrow entrance is protected by the Punta Castle on the west and Morro Castle and La Cabafia on the east. Havana comprises an area of about 9 square miles and is protected by a sea wall on the west. The older portion of the city, which was formerly surrounded by a wall begun in 1633 and demolished in 1863-80, has all the shortcomings of an old colonial town. Its streets are narrow and crooked and up to the time of the American occupation were in a state of the utmost neglect. Beyond the limits of the old city, however, Havana is essentially modern. The well-laid-out and broad streets, the abundance of promenades, and picturesque plazas would do credit to any city on the continent. The houses are generally low and built

in the Spanish style, which, however, is relieved by the bright coloring of the walls and roofs. The atmosphere, also, is generally bright and clear, as there are very few days wholly clouded, the rain generally falling in the afternoon. The climate, though tropical, is tempered by alternating land and sea breezes. The mean temperature is 78° F. for the warmest and 70° F. for the coolest month, the extremes being 50° and 90° F. The humidity, however, is above 80 per cent at all seasons.

In the old city, and near the inner entrance to the harbor, is the Plaza de Armas, fronting on the west stands the former governor's palace. To the north of this plaza is La Fuerza, the oldest structure in the city, built as a defense in 1538 by Hernando de Soto. Beginning at the Castillo de la Punta at the outer harbor entrance, and running outside the old city wall, is the Prado, a wide and beautiful boulevard with a double row of shade trees along the middle. It terminates in the Colón Park, or Campo Marte, the largest in the city, planted with trees and palms, and having a fountain in the centre. Running west from Colón Park is the Calle de La Reina, which is continued as the Paseo de Tacón, a splendid drive passing the Botanical Gardens and terminating at the citadel of El Príncipe outside of the city. At the east entrance stands a fine statue by Canova of Charles III, and from its west end a road leads to the Colón Cemetery with a magnificent entrance of three granite arches, and containing numerous fine monuments, among which the firemen's monument, made entirely of marble, and erected to the memory of 30 firemen who perished in the performance of their duty, is a magnificent piece of monumental sculpture. Other notable promenades are the Alameda de Paula and the Calzada de La Infanta, a fine boulevard skirting the city on the west. The commercial section is in the eastern part of the city, where well-appointed retail stores are to be found in the calles (streets) del Obispo, de O'Reilly, and de San Rafael. The city has electric street railways; 10,482,472 passengers were carried in the first four months of the year 1914.

The public buildings of the capital are not far behind its natural embellishments; the executive mansion and the cathedral dating from 1724, which contained, until 1808, the remains of Columbus, are among the most prominent. It is now proposed to build a million-dollar capitol. The educational institutions include the University of Havana (see HAVANA, UNIVERSITY OF) with three faculties; the Jesuit College de Belón, a museum and library, a conservatory of music, a normal school, and a number of minor schools. The theatres are numerous, and one of them, the Teatro Tacón, is one of the largest playhouses in the world. There are numerous hotels and clubs in the city; and the newspapers and periodicals number over 100, the leading ones being *La Lucha*, *El Diario*, *La Discusión*, and the financial and commercial journal *El Avisador Comercial*. The water supply is excellent, and the public works show a generally improved condition in recent years. At the end of the Spanish-American War the American authorities found the city in a woefully unsanitary condition. The streets were unswept, garbage was piled in heaps, and the pavements were in a miserable condition, especially in the old city. The sewerage system was hardly more

than a name. The existing sewers were in some places completely clogged, and all of them leaked, contaminating the surrounding soil. In 1902, however, the city was handed over to the new Republic in a wonderfully improved condition. A well-regulated system of street cleaning and garbage collection was put in operation. Many of the streets were repaved, and various kinds of experimental pavements were laid. Contracts were let for a new sewer system, and a complete survey of the city, with a view to adopting a system of street grades, was made. Streets, hospitals, and other buildings were so thoroughly disinfected that yellow fever, which during the war carried off many thousands of people, has been wholly eradicated.

The chief industrial establishments of Havana are its cigar and tobacco factories, which are the largest in the world. Other industries are carried on on a smaller scale. Besides boxes and barrels for the tobacco and the sugar trade, wagons and carriages are manufactured, and even some machinery, and the tendency is towards a diversification of industries. The exports consist chiefly of cigars, tobacco, and sugar, which mostly find their way to the United States. Havana is the chief outlet for the products of the island. It is connected by steamers with the United States, France, England, and Spain, and by rail with every important centre on the island. The imports consist chiefly of foodstuffs and cotton. Since the evacuation of the island by Spain the commerce of Havana has shown a considerable increase. The total value of the foreign commerce for 1912 was \$137,727,000, of which \$87,324,000 represented imports, and \$50,403,000, exports. About one-half of the imports are from the United States and about two-thirds of the exports are to that country. During the same year 1745 vessels in the foreign trade, with a net tonnage of 3,209,552, entered the port, and 1701, with a net tonnage of 3,164,240, cleared; of coasting-trade vessels, 2383, of 522,871 gross tons, entered, and 2385, of 518,256 gross tons, cleared. The receipts of the Havana custom-house for the year amounted to \$19,391,754, the import duties contributing \$18,953,227 of the total. In the foreign trade \$81,415,000 worth of merchandise was carried in American bottoms. The extensive commerce of Havana is greatly facilitated by the numerous financial institutions situated in the city. The population of Havana, including its suburbs, was 242,055 in 1899, against 200,448 in 1887; in 1902, 262,395; in 1907 (census), 297,159; in 1914 (est.), 363,508. In 1912, 32,631 immigrants arrived at Havana, of whom 30,378 were Spanish and 547 North Americans.

The Bay of Havana was discovered in 1508 by Sebastian de Ocampo. The city itself was originally founded in 1515 on the south coast, by Diego de Velasquez, but in 1519 it was transferred to its present site. It was sacked and burned by pirates in 1538, was plundered by another band in 1555, having by that time become Spain's chief naval station in the New World, and was again despoiled in 1563. It was unsuccessfully attacked by Drake in 1585, after which the forts El Morro and La Punta were built. During the seventeenth century it was several times attacked and blockaded by Dutch fleets, while pirates were continually hovering around, on the watch for unprotected galleons. During the eighteenth century the city was sev-

eral times threatened by the English, who took Morro Castle by assault in 1762 and captured the city, remaining in control for a year. The United States battleship *Maine* was blown up in the harbor on Feb. 15, 1898; the remains were long an obstruction to the harbor, until removed and sunk in the ocean by the American government in 1912. During the Spanish-American War the city and harbor were blockaded by the American fleet. For a good description of Havana, consult Norton, *Complete Handbook of Havana and Cuba* (Chicago, 1901), and F. A. Ober, *Guide to the West Indies* (New York, 1908).

HAVANA. The smallest but most important and most populous province of Cuba. It occupies a band running across the western part of the island from the Gulf of Mexico to the Caribbean Sea and is bounded by the Province of Pinar del Río on the west and Matanzas on the east. Its area, including the Isle of Pines (q.v.), is 2772 square miles. Its surface is rather low and undulating, with some undefined elevations in the interior. The forests yield valuable cabinet timber, and the principal agricultural products are sugar cane, tobacco, pineapples, yucca, bananas, corn, and vegetables. Havana is the principal manufacturing province of the Republic, and has numerous large cigar and cigarette factories, as well as sugar mills, foundries, tanneries, saw mills, and distilleries. The province is as densely populated as the State of Connecticut; its population in 1887 was 451,928, and in 1910, 575,266. The capital is Havana.

HAVANA. A city and the county seat of Mason Co., Ill., 40 miles southwest of Peoria, on the Illinois River, which is here spanned by a bridge, and on the Illinois Central and the Chicago, Peoria, and St. Louis railroads (Map: Illinois, B 5). It is a popular summer resort and has manufactures of shovels, gasoline engines, farm implements, cutlery, cooperage, etc., and a considerable trade in fish, agricultural produce, grain, and fruit. The city owns its water works. Pop., 1900, 3268; 1910, 3525.

HAVANA, UNIVERSITY OF. An institution for higher education founded at Havana, Cuba, in 1728. There are faculties of philosophy, medicine, and law, and the university includes schools of letters and philosophy, pedagogy and science, engineering and architecture, electricity, agriculture, medicine and pharmacy, dental and veterinary surgery, and law. Until the American occupation of Havana the university was housed in the old convent of Santo Domingo. Better quarters were provided in 1900 by the American military government. The attendance in the departments in 1913-14 was about 1070. The yearly income is about \$400,000. The libraries contain 100,000 volumes. The rector of the university in 1914 was Dr. Leopoldo Berriel y Fernández.

HAVARD, a'vâr', HENRY (1838-). A French art historian, born at Charolles. An exile from France because of his part in the Commune, he returned after the amnesty. His stay in Italy, Belgium, and Holland determined his choice of art criticism as a vocation. Devoting himself at first to the painting of Holland, he later became a recognized authority on the decorative arts. In 1887 he was appointed inspector general of fine arts, and Officer of the Legion of Honor. Among his important works are: *La Hollande pittoresque* (1874-78); *Am-*

sterdam et Venise (1876); *L'Art et les artistes hollandais* (1879-81); *Histoire de la peinture hollandaise* (1881); *La Hollande à vol d'oiseau* (1880); *La Flandre à vol d'oiseau* (1882); *L'Art dans la maison* (1884); the valuable *Dictionnaire de l'ameublement et de la décoration* (1887-90); *Les manufactures nationales* (1888), with Vachon; *Van der Meer de Delft* (1889); *Les Boule* (1893); *L'Orfèverie* (1896); *Les arts de l'ameublement* (12 vols., 1891-97); *Histoire et philosophie des styles* (1899-1900); *L'Art et le confort dans la vie moderne* (1904).

HAVAS (à'vâ') AGENCY. An organization in Paris, founded by a rich merchant, Charles Havas, in the reign of Louis Philippe, for the purpose of gathering telegraphic news and supplying it to newspapers. It was in 1879 converted into a company, with a capital of 8,500,000 francs.

HAVASUPI, hâ'vâ-sû'pê. A small but interesting tribe of Yuman linguistic stock in the Coconino Cañon, northwestern Arizona. Although numbering only 174, their isolation has enabled them to preserve their primitive characteristics to a remarkable degree. Living as they do in the bottom of a cañon, isolated from the outside world by great perpendicular barriers of rock, the Havasupi Indians are perhaps nearer to the original estate than any other tribe in the Southwest. They are agriculturists and entirely self-supporting, having always possessed three years' provisions stored away in stone-built granaries in the clefts of the mountain walls. The women are expert basket makers. To the Spaniards they were known as Cojonino. Consult Goddard, *Indians of the Southwest* (New York, 1913). See YUMA.

HAVEL, hâ'fel. A river of Germany, tributary of the Elbe (Map: Germany, H 5). It has its origin in a small lake a mile west of the town of Neustrelitz, in Mecklenburg, flows southward from its source to Potsdam, and thence west and northwest to its junction with the Elbe, opposite the town of Werben. Its entire length is 220 miles, and it is navigable to Fürstenberg, a town within 30 miles of its source. The Havel, forming for a considerable part of its course the connecting link to a long chain of lakes, is of great importance to the internal trade of Prussia, and is connected by canals with the Oder, Rhine, and Elbe rivers. Of its affluents, the Spree, which is longer than the Havel, is the only one worthy of mention.

HAVELOCK, hâ'v'lok. A town in Lancaster Co., Neb., 6 miles northeast of Lincoln, on the Chicago, Rock Island, and Pacific, and the Chicago, Burlington, and Quincy railroads (Map: Nebraska, H 4). It contains locomotive shops of the Burlington system and has a public library. The water works are owned by the town. Pop., 1900, 1480; 1910, 2680.

HAVELOCK, SIR HENRY (1795-1857). An English soldier. He was born April 5, 1795, at Bishop-Wearmouth, Durham, where his father was a merchant and a shipbuilder. He was educated at the Charterhouse and studied law at the Middle Temple, but abandoned the profession. He entered the army soon after the battle of Waterloo, went to India in 1823, and distinguished himself in the Afghan and Sikh wars. In 1854 he was made adjutant general of the troops in India, and in 1857 he commanded a division of the army that invaded Persia. News arriving of the Indian Mutiny,

immediately after peace with Persia, he hastened to Calcutta. He was directed to organize a small movable column at Allahabad and to push on to the relief of Cawnpore and Lucknow. By forced marches and three sanguinary victories he reached Cawnpore and found the mutilated bodies of the English women and children who had been massacred upon his approach. An avenging column quitted Cawnpore to advance upon Lucknow. After eight victorious battles with vastly superior numbers of rebels, Havelock's little army, thinned by fatigue and sickness, was obliged to retire upon Cawnpore. Early in September, 1857, General Outram arrived with reinforcements: Havelock again advanced to the relief of Lucknow, Outram chivalrously refusing to take the command out of his hands. After desperate fighting at Mungulwar, at the Alam Bagh, and through the streets of Lucknow, they gained the Residency, to the joy of the beleaguered garrison, but were in turn besieged. They held their own until Sir Colin Campbell (later Lord Clyde) forced his way to their rescue on November 19. Havelock, unfortunately attacked by dysentery, died five days after the relief, on Nov. 24, 1857. His services had won him the distinction of K.C.B., and other honors, including a baronetcy, were conferred upon him before the news of his death reached England. The rank and the pension were subsequently given to his son. For his biography, consult: Brock (London, 1858); Marshman (new ed., ib., 1870); Forbes (ib., 1897).

HAVELOCK-ALLAN, SIR HENRY MARSHMAN (1830-97). An English soldier, the son of Sir Henry Havelock, the reliever of Lucknow. He was born at Chinsurah, India, Aug. 6, 1830, and was educated at a private school in London. In 1846 he was commissioned an ensign in the Thirty-ninth Foot. He was a lieutenant in 1848 and an adjutant in 1852. In 1857 he saw active service in Sir James Outram's Persian campaign. After the outbreak of the Indian Mutiny he accompanied his father to Calcutta and served on his staff in his victorious march to the relief of Cawnpore and Lucknow. At Cawnpore, on July 16, 1857, his gallantry and daring in leading a charge for the capture of a gun won for him the Victoria Cross. In the advance from Cawnpore to Lucknow he was severely wounded. In January, 1858, the baronetcy and pension which it had been proposed to bestow upon his father were conferred upon him. He served until the suppression of the mutiny, received brevets of major and lieutenant colonel, and commanded Hodson's Horse in Lord Clyde's last campaign. He served in New Zealand under Sir Duncan Campbell in the Maori War of 1863-64 and as assistant quartermaster-general in Canada in 1867-69. On leave of absence and as a newspaper correspondent, he saw the Franco-German War of 1870-71 and the Russo-Turkish War of 1877-78. He was a member of Parliament as a Liberal (1875-81) and later as a Liberal-Unionist (1885-92) and from 1895 until his death. He took an active part in the debates and held the position of chairman of the Naval and Military Service Committee. In the latter capacity, during the parliamentary recess of 1897, he visited India to study the needs of the Indian army and visited the Afghan frontier, where a campaign against the hill tribes was in progress. Here, on Dec. 30, 1897, while accompanying the troops near Ali Masjid,

an unmanageable horse carried him beyond the lines, and he was fired upon and killed by some Khaibaris who were harassing the British flank. He took the additional surname of Allan in 1880 and retired from the active list of the army in 1881 with the rank of lieutenant general. He wrote *Three Main Military Questions of the Day* (1867). Consult: Kaye, *History of the Sepoy War* (London, 1864-75); Malleson, *History of the Indian Mutiny* (ib., 1878-80); Marshman, *Life of Sir Henry Havelock* (ib., 1870).

HAVELOCK THE DANE, THE LAY OF. An Anglo-Danish legend of early England. Gaimar, an Anglo-Norman chronicler of the twelfth century, speaks of it as an ancient story. The earliest form is a French version, *Le lai de Havelok*, abridged by Gaimar. The old French and an English version of the later thirteenth century were published by Sir F. Madden for the Roxburgh Club (1828), and *The Lay of Havelok the Dane* was edited by W. W. Skeat in the "Early English Text Series" (1868). Consult: F. Brie, "Zum Fortleben der Havelok Sage" in *Englische Studien*, xxxv, 359 (Leipzig, 1905); L. A. Hibbard, *Three Middle English Romances* (London, 1911); C. W. Whistler, *Havelok the Dane* (ib., 1912). See GRIM.

HAVEMANN, hā'v'e-mān, WILHELM (1800-69). A German historian, born in Lüneburg, Hanover. He studied law in the universities of Göttingen and Erlangen. In 1825 he was arrested for his alleged revolutionary activity and was sentenced to five years' imprisonment. After his release he taught in various schools until 1838, when he became a professor in the University of Göttingen, where he was admitted to the Gesellschaft der Wissenschaften (1850). From 1811 to 1848 he edited the *Göttinger gelehrten Anzeigen*. His most important work is the *Geschichte der Lande Braunschweig und Lüneburg* (rev. ed., 1853-57).

HAVEMEYER, hā'v'e-mī'er, HENRY OSBORNE (1847-1907). An American sugar manufacturer, born in New York City. After three years (1865-68) of training in the Havemeyer business of sugar refining in Williamsburgh, Brooklyn, he became a partner in the firm of Havemeyer and Elder, his study of production and market conditions gaining him controlling influence. When the American Sugar Refining Company was formed in 1891, he was chosen vice president and soon afterward its president. Under his direction the capitalization of the corporation was increased from \$50,000,000 to \$75,000,000, and half of the stock of the Spreckles Company was acquired, thus giving his company control of the Hawaiian sugar and of the markets west of the Mississippi River. He became president also of the American Coffee Company. In 1897 Havemeyer was arrested on a charge of contempt for refusing to answer the questions put to him by a committee of the United States Senate, but he was acquitted.

HAVEMEYER, WILLIAM FREDERICK (1864-74). An American politician. He was born in New York City, of German parentage, graduated at Columbia in 1823, and went into the sugar-refining industry with his father. In 1842 he retired from business with a good fortune and devoted himself to politics. He was an enthusiastic Democrat and was elected mayor of New York in 1845 and in 1848 by large majorities, and for a third time in 1872,

but by a narrow margin. His first two terms were marked by the thorough care he bestowed on even the smallest details of his office and the honesty and economy he exacted. His third administration was less successful than the others in his appointments, and contentions with the aldermen monopolized the greater part of his time. An appeal was made to the Governor for his removal, but was not acted upon. He was president of the Bank of North America from 1851 to 1861 and brought it successfully through the crisis of 1857. His fearlessness and political experience were of the greatest value in the overthrow of the Tweed "ring."

HAVEN, ALICE BRADLEY (1828-63). An American author. Her maiden name was Emily Bradley, and she was born at Hudson, N. Y. Her first writing appeared in the Philadelphia *Saturday Gazette*, to whose editor, Joseph C. Neal, she was married in 1846. She assumed the name of Alice and wrote under the pen name of "Cousin Alice." After her husband's death, in 1847, she took editorial charge of his paper and still found time to contribute many poems and short stories to other periodicals. In 1853 she married Samuel L. Haven. Her works include *The Gossips of Rivertown* (1850) and *The Good Report* (1860). Consult *Cousin Alice: A Memoir of Alice B. Haven* (New York, 1865), which is made up of parts of her diary.

HAVEN, ERASTUS OTIS (1820-81). An American educator and Methodist Episcopal bishop. He was born in Boston, graduated at Wesleyan University in 1842, and after a short period of teaching in preparatory schools entered the Methodist ministry (1848). In 1853 he was chosen professor of Latin in Michigan University, and in 1856-63 he was editor of *Zion's Herald* in Boston. He served in 1862-63 in the Massachusetts Senate, where he displayed especial interest in educational matters. In 1863-69 he was president of the University of Michigan and for three years thereafter president of Northwestern University. He was corresponding secretary of the Methodist Episcopal board of education in 1872-74, when he was chosen chancellor of Syracuse University. In May, 1880, he was ordained a bishop. Among his works are: *The Young Men Advised* (1855); *Pillars of Trust* (1866); and a treatise on *Rhetoric* (1869). Consult his *Autobiography*, edited by C. C. Stratton (1883).

HAVEN, GILBERT (1821-80). An American Methodist Episcopal bishop. He was born at Malden, Mass., graduated at Wesleyan University in 1846, taught for several years, and in 1851 joined the New England conference. He was for a short time chaplain of a Massachusetts regiment in the Civil War. In 1862 he traveled in Europe for his health and on his return was two years a preacher in Boston. In 1867 he became editor of *Zion's Herald*, holding the place until elected a bishop in 1872. For some years he had manifested great interest in the welfare of negroes, especially in the Southern States, and had supervision of relief for destitute freedmen in Mississippi. As Bishop, he was stationed at Atlanta, Ga., with special charge of the interests of his church in the South. He was an earnest advocate of Protestant missions in Mexico and described his missionary journey to that country in *Our Next-Door Neighbor* (1875). Among his other writings were: *The Pilgrim's Wallet* (1865); *Sermons, Speeches, and Letters on Slavery and its War*

(1869); *Life of Father Taylor, the Sailor Preacher* (1871); *Christus Consolator* (1893). edited by his son.

Consult W. H. Daniels, *Memorials of Gilbert Haven* (Boston, 1880), and George Prentice, *The Life of Gilbert Haven* (New York, 1883).

HAVEN, JOSEPH (1816-74). An American Congregational clergyman. He was born in Dennis, Mass., graduated at Amherst in 1835, studied theology at Union Theological Seminary, and graduated at Andover in 1839. He held pastorates at Ashland and Brookline, Mass., from 1846 to 1850, edited the *Congregationalist*, was professor of mental and moral philosophy at Amherst (1850-58), and from 1858 until 1870 professor of systematic theology at Chicago Theological Seminary. In 1873 he became acting professor of mental and moral philosophy at the University of Chicago. He published: *Mental Philosophy* (1857); *Moral Philosophy* (1859); *Studies in Philosophy and Theology* (1869); *Systematic Divinity* (1875); *History of Philosophy* (1876).

HAVERCAMP, hā'vēr-kāmp, SIEGBERT (1684-1742). A Dutch numismatist and scholar, born and educated at Utrecht. He was long a preacher and an instructor in Greek at Leyden and was appointed professor of Greek and later of history in the same university. He edited Josephus (1726), Lucretius (1725), and other works; wrote on the history of Holland (1739) and composed a universal history to the time of Charlemagne (1736-39); but is best known for his numismatical writings: *De Numismate Alexandri Magni* (1722); *Thesaurus Morellianus* (1734); *Nummophylasium Regium Christianum* (1742). Consult Sandys, *A History of Classical Scholarship*, vol. ii (Cambridge, 1908).

HAVERFIELD, FRANCIS JOHN (1860-). An English historian, born in Shipston-on-Stour and educated at Winchester and at New College, Oxford. He was a schoolmaster in 1884-91, held various posts (tutor, librarian, etc.) in Christ Church, Oxford, between 1891 and 1907, and then became Camden professor of ancient history at Oxford. His special field is the history of the western outskirts of the Roman Empire. He wrote *The Romanization of Roman Britain* (1906; new ed., 1912) and *Ancient Town Planning* (1913). He edited Henry Nettleship's *Lectures and Essays* (1895), with a memoir, and H. F. Pelham's posthumous essays (1911).

HAVERFORD COLLEGE. An educational institution, situated at Haverford, Pa. It was opened in 1833 as a school designed to afford literary instruction and religious training to the children of Friends, under whose control the present college continues. Systematic physical training and athletic sports were made prominent in the original plan. The school was temporarily suspended in 1845, to give opportunity for collecting an endowment, was reopened in 1848 and chartered as a college in 1856, open to all denominations on equal terms. In 1914 the faculty numbered 22 and the student body 176. At the same time the library contained 62,000 volumes. The college grounds, occupying 225 acres, are valued at \$1,200,000, the buildings are valued at \$100,000, while the endowments represent \$1,100,000. The degrees of B.A., B.S., and M.A. are conferred. The president in 1914 was Isaac Sharpless, Sc.D., LL.D.

HAVERFORDWEST, hā'vēr-fōrd-wēst' or hā'vēr-fōrd- (Welsh Hwlfordd). A seaport, mar-

ket town, and municipal county, the capital of Pembrokeshire, Wales, on St. George's Channel, 8 miles northeast of Milford (Map: England, A 5). It has coal mines and a paper mill. There is a small and steadily declining trade in exporting coal, cattle, and agricultural produce, and importing timber, spirits, tea, etc. Its port admits vessels of 150 tons. It has an interesting old church, the remains of a castle built about 1140 and of a twelfth-century Augustinian priory endowed by Robert de Hwlfordd. The town was colonized with Flemings by Henry I in 1107 and has a long roll of charters embodying peculiar privileges. It owns its gas and water works, markets, and slaughterhouses. Four miles from the town stands Picton Castle, a fine example of a Norman fortress. Pop., 1911, 5010.

HAVERGAL, FRANCES RIDLEY (1836-79). An English religious writer. She was born at Astley, England, where her father, William Henry Havergal (1793-1870), was rector. She was educated partly at home and partly at Düsseldorf, Germany. She early developed considerable musical talent and wrote hymns for which she furnished the harmonies. These gradually found their way into print, and she became known, almost against her will, because of her simple expression of deep religious devotion. Her works, in both verse and prose, include: *The Ministry of Song* (1870); *Kept for the Master's Use* (1879); *Loyal Responses* (1878); *Coming to the King* (1886); *Red-Letter Days* (1879). She is best known as author of the hymn "Take my Life and Let it Be." Her *Poetical Works* (2 vols., 1884), containing her hymns, her best work, were collected by her sister, who also published *Memorials of Frances Ridley Havergal* (2d ed., New York, 1880).

HAVERHILL, hä'vər-īl. A city in Essex Co., Mass., 33 miles north of Boston, at the head of navigation on the Merrimac River, and on the Boston and Maine Railroad (Map: Massachusetts, E 1). The city, which includes several villages, is handsomely built on hills sloping to the river, and is connected by iron bridges with the towns of Groveland and West Newbury. Haverhill is noted as an industrial centre, particularly for the manufacture of boots and shoes, the annual output being valued at \$27,000,000. Other products are slippers, woolen hats, paper, boot and shoe machinery and supplies, woollens, leather, boxes, nails, and bricks. Among the principal buildings are the city hall, public library, \$400,000 high school, Moose, Hibernian, and Elks homes, Masonic Temple and other society halls, old ladies' home, Hale, tuberculosis, and city hospitals, city almshouse, and Bradford Academy. There is also a marble soldiers' monument, and one to Hannah Dustan. Haverhill adopted the commission form of government as early as 1908. The executive power is vested in a mayor and four aldermen, each of whom is at the head of a city department. These officials all serve for two years. The school board, consisting of four members, are chosen at large. The charter of 1908 also provides for the initiative, referendum, and recall. The annual income and expenditures of the city in 1912 amounted to \$2,807,000 and \$2,783,000 respectively, the principal items of expense being \$48,000 for the police department, \$56,000 for the fire department, and \$243,000 for education. Pop., 1890, 27,412; 1900, 37,175; 1910, 44,115; 1914 (U. S. est.), 47,071; 1920, 53,884.

In 1640 a company from Ipswich and Newbury settled on the site of the Old Indian town Pentucket, and in the following year adopted the name "Haverhill" (from Haverhill, England, the birthplace of their minister, John Ward). Being a frontier town, Haverhill was continually harassed by the Indians. In the attack of 1697 Mrs. Dustan was captured. (See DUSTAN, HANNAH.) In 1708 the French and Indians entered the town and killed 16 and captured 35 of the inhabitants. In 1645 a town charter was secured, and in 1870 Haverhill was incorporated as a city. The town of Bradford was annexed in 1897. In 1882 there was a disastrous fire. Lake Kenosha, 1 mile northeast, is famous as the birthplace of Whittier. Consult Chase, *The History of Haverhill* (Haverhill, 1861), and Frankle (ed.), *The Story of a New England Town* (Boston, 1891).

HAVERHILL. A town and summer resort, including six villages, the county seat of Grafton Co., N. H., 93 miles by rail north-northwest of Concord, on the Boston and Maine Railroad, and on the Connecticut River (Map: New Hampshire, E 4). Woodsville, the most important of the villages, has railway shops, and the town has extensive whiststone-quarrying and dairying interests and manufactures lumber, farm wagons, house finishings, stanchions, whetstones, etc. There are high-school, county, almshouse, and hospital buildings. Haverhill was first settled in 1762. Pop., 1900, 3414; 1910, 3498. Consult J. Q. Bittinger, *History of Haverhill* (Albany, 1888).

HAVERS, Clotpron (c.1650-1702). An English anatomist and physician. He studied at Cambridge and Utrecht, and from the latter college obtained the degree of M.D. in 1685. Havers began practice in London, and gave special attention to the subject of anatomy, embodying his ideas in the *Osteologia Nova* (1691). This was the first exhaustive treatise on the structure of bone, and served to perpetuate the author's name by the term "Haversian canals." He also wrote a *Survey of the Microcosme* (1695) and a *Discourse of the Concoction of the Food* (1699).

HAVERSACK (Fr. *havresac*, from Ger. *Habersack*, *Hafoersack*, haversack, sack for oats, from *Haaber*, *Hafer*, oats + *Sack*, sack). A canvas or strong duck cloth bag, carried by soldiers on the march. It is a part of the man's equipment, and on service contains the rations for immediate consumption and the individual mess kit. It was formerly worn on the left side, secured by a strap passing over the right shoulder. In the present infantry equipment, United States army, the haversack is carried on the back and is the upper element of the pack.

HAVERSCHMIDT, hä'vər-shmīt, François (1835-94). A Dutch poet, born at Leeuwarden. He studied for the Church at Leyden, and undertook two small charges in 1859. Three years afterward he went to Nieuwediep, and in 1864 to Schiedam. There he published some prose essays, *Familie en Kennissen* (1876); but he is better known as "Piet Paaltjens," under which name he published all the poems written after his early youth—especially for his very popular *Snikken en Grimlachjes* (1867), student verse of which six editions were called for in two years. This was also translated into French and Latin.

HAVERSIAN CANALS. See BONE.

HAVERSTRAW. A village in Rockland Co., N. Y., 32 miles north of New York City. It is picturesquely situated on the west shore of the

Hudson River, which here expands into Haverstraw Bay, and on the New Jersey and New York, the New York, Ontario, and Western, and the West Shore railroads (Map: New York, A 2). It is principally engaged in brickmaking and silk weaving, and has a public library, hospital for crippled children, and Stony Point Park. The village is governed under a general State act, the administration being vested in a president and a council chosen at the annual charter election. Pop., 1900, 5935; 1910, 5669. Haverstraw was settled by the Dutch, became a precinct in 1719, and was incorporated as a village in 1854. At the house of Thomas H. Smith, since called the "Old Treason House," Arnold met André in September, 1780, to arrange for the surrender of Stony Point. In 1825 the "Haverstraw Community" was organized here, but broke up in a few years. Consult an article, "Smith House at Haverstraw," in *Magazine of American History*, vol. v (New York, 1881).

HAVET, a'vâ', ERNEST AUGUSTE EUGÈNE (1813-89). A French philosopher, born in Paris. After some educational appointments of minor importance, he was on the staff of the Normal School (1842-53), and became also professor of French literature at the Collège de France (1854-85) and member of the Academy of Moral and Political Sciences. His best works are an edition of Pascal's *Pensées*, with commentary (1852; 2d ed., 1881), and *Le christianisme et ses origines* (4 vols., 1871-84).

HAVET, JULIEN (1853-93). A French historian, son of the philosopher, Ernest Havet. He was born at Vitry-sur-Seine, was educated in Paris at the Ecole des Chartes and the Ecoles des Hautes Etudes, and became assistant curator in the department of printed books in the Bibliothèque Nationale. Although he died in his forty-first year he accomplished a great deal in the difficult field of French history in the Merovingian and Carolingian periods. In 1889 he edited Gerbert's letters. In 1896 most of his published work was collected in *Questions mérovingiennes*, and his unpublished work in *Opusculs inédits*. Consult the bibliography in *Mélanges Havet* (Paris, 1895); Delisle's eulogy in that volume; and the sketch by his brother Louis, an eminent Latinist, prefixed to *Questions mérovingiennes* (ib., 1890).

HAVILAH. A country in Arabia. It is mentioned in Gen. ii. 11-12 as surrounded by the river Pishon and containing gold, *bedolach*, and *shoham* stone; in Gen. x. 29 (1 Chron. i. 23), as one of the districts of Joktan; in Gen. x. 7 (1 Chron. i. 9), as one of the tribes of Cush; in Gen. xxv. 18, as bordering on the territory of the Ishmaelites; and in 1 Sam. xv. 7, where, however, the name should probably be emended into Telam. Niebuhr found a district called Huwaila between the seats of the Beni Khalid and Oman on the Persian Gulf. In South Arabian inscriptions a Khaulan is mentioned. The products of this country referred to in Gen. ii. 11, gold, the gum of the *bedolach* tree, and the *shoham* stone, which is the Assyrian *samtu*, or malachite, seem to point to Jemama and northeast Arabia extending to the Persian Gulf. Consult: Glaser, *Skizze der Geschichte und Geographie Arabiens* (Berlin, 1890); Meyer, *Geschichte des Alterthums*, vol. i (3d ed., Stuttgart, 1913); and the commentaries on Genesis by Dillmann (Leipzig, 1892) and Gunkel (2d ed., Göttingen, 1910).

HAVILAND, WILLIAM (1718-84). An English soldier in the French and Indian War in

America. He was born in Ireland, and in 1739 was appointed ensign in an infantry regiment, with which he is believed to have served at Porto Bello and Cartagena. During part of the rebellion of 1745 he was aid-de-camp to Colonel (afterward Lord) Blakeney, and subsequently returned to Ireland, where he remained until 1752, when he was appointed a lieutenant colonel. In 1757 he went to America with a regiment, was in command at Fort Edward during the winter of 1757-58, served under Abercromby at Ticonderoga, and later under Amherst. In 1760 he was put at the head of a mixed force of colonists and Indians, 3400 strong, and ordered to force a way by Lake Champlain, defended by a French post at Isle aux Noix, and to join the armies of General Murray and Lord Amherst, which were converging on Montreal. He was entirely successful. After the capitulation of Montreal he served in the West Indies, and was present at the conquest of Havana in 1762. An energetic and resourceful officer, he was advanced in rank until he was made general in 1783.

HAVILDAR' (Hind. *havāldār*, from Hind., Pers. *havālah*, Ar. *hawālā*, charge, custody + Pers. *dār*, possessing). The highest noncommissioned rank in the native army of British India.

HAVIN, a'vân', LÉONOR JOSEPH (1799-1868). A French politician, born in Paris. He studied law, became justice of the peace at Saint-Lô (1830), and for the following 17 years was deputy from the Department of La Manche. While in the chamber he was always a member of the opposition. He was a prime mover in the agitation which led to the February revolution, but allied himself with the Moderates in the National Assembly of 1848-49. He continued to take a prominent part in the Republican government up to 1851, but after the coup d'état he lost his position in the State Council, and his influence was henceforth exerted through his journal, *Le Siècle*, which became noted for good judgment and loyalty to liberal principles.

HAVLÍČEK, hāv'le-ehék, KAREL (1821-56). An important and popular Bohemian journalist, critic, and poet, born at Borová, whence his pseudonym, "Havel Borovský." He studied at Prague, taught at Moscow, and after his return to Bohemia edited at Prague *Národní Noviny* (1848-50), which was followed by the *Slonán* (Kuttenberg, 1850-51). For his liberal articles in these journals he was imprisoned at Brixen in the Tirol (1851), where he wrote the sarcastic *Tyrolské Elegies*. He returned to Bohemia in 1855, and died at Prague in the following year. He wrote many clever epigrams, which have not all been published; a ballad, *Král Láva*; the satiric poem, *Křest sv. Vladimíra* (The Baptism of St. Vladimir, 1877); and translations from Gogol, Voltaire, and others. His collected works, *Sebrané Spisy*, contain a part of his epigrams. His biography, by his editor, Tuma, was published at Prague (1883). The greater part of his writings have been translated into German.

HAVRE, hā'vër; Fr. LE HAVRE, lē il'vr'. A city and seaport of France, capital of an arrondissement of the same name in the Department of Seine-Inférieure, on the estuary of the Seine, 142 miles by rail northwest of Paris (Map: France, N., F 3). It is a well-built and regularly laid out city, with a number of fine boulevards and squares, as the Boulevard François I,

Boulevard de Strasbourg, Course de la République, and Rue de Paris, the chief boulevards occupying the site of the ancient ramparts. The most prominent public buildings are the city hall, built in Renaissance style; the church of Notre Dame, dating from the sixteenth century; the exchange, the Palais de Justice, arsenal, and customhouse. The museum has fine statues of Bernardin de Saint-Pierre and Casimir Delavigne (both natives of Havre), and contains collections of paintings and sculptures and a library of about 50,000 volumes. The harbor, formed in part by an immense dam, is regarded as one of the best in France, and has a capacity of about 500 vessels. Its entrance, defended by two forts and a number of batteries, is barely 300 feet in width. The harbor is divided into 10 separate basins, with an aggregate area of 240 acres, and has over eight miles of quays.

Havre ranks as the second seaport of France, Marseilles being first. Its situation at the mouth of the Seine gives it great advantage in regard to the internal trade of the country, while its position on the English Channel makes it one of the chief centres of the foreign trade. There is regular steam communication with New York and many other of the principal ports of the world. In 1911 the total of vessels entered and cleared was 13,362, of 10,239,000 tons. In 1911 the value of the imports and exports was 2,020,200,000 francs. This represents the special trade; the general trade amounted to 2,714,500,000 francs. The chief articles of import are cotton and cotton goods, grain, hides and skins, silk, coffee, etc. The exports are mainly silk and cotton goods, coffee, clothing, metal articles, and artificial flowers. Havre has a number of large industrial establishments, including sugar refineries, chemical and glass works, breweries, shipbuilding yards (for battleships as well as

merchant vessels), electrical works, and works for the manufacture of guns and heavy ordnance. In 1856, Havre had 62,470 inhabitants; in 1898, 119,470; in 1901, 130,196; in 1906, 132,430; in 1911, 136,159.

Havre was an unimportant fishing village until 1517, when the construction of its harbor was begun by Francis I, from whom it received numerous privileges. It was surrendered to the English by the Huguenots in 1562, but was retaken by the French soon afterward. It was bombarded by the English in 1694, 1759, 1794, and 1795. Havre owes its harbor improvements to Richelieu, Louis XIV (who employed Vauban), Louis XVI, and Napoleon. In October, 1914, Belgium, having been overrun by the invading Germans, transferred its seat of government to Havre. See WAR IN EUROPE.

HAVRE. A city and the county seat of Hill Co., Mont., 80 miles northeast of Fort Benton, on the Great Northern Railroad (Map: Montana, G 1). It has extensive shops of the Great Northern System, and is situated in a coal-mining, stock-raising, and farming country. The water works are owned by the city. Pop., 1900, 1033; 1910, 3624.

HAVRE DE GRACE, häv'ér de gräs. A city in Harford Co., Md., 36 miles northeast of Baltimore, on the Susquehanna River, near its mouth, in Chesapeake Bay, and on the Baltimore and Ohio and the Philadelphia, Baltimore, and Washington railroads (Map: Maryland, G 1). It has direct water connection with Baltimore, and contains a public library, hospital, and a park. The chief industrial establishments are shad and herring fisheries, flour, textile, saw, and planing mills, launch and boat yards, three large stone quarries, and fruit canneries. On Battery Island is a government fish hatchery. Pop., 1900, 3423; 1910, 4212.
